Location of the headquarters in Luhden

All profiles are produced in accordance with the medium EN 12020-2 standard:

Linearity:	0,35 mm/m
Max. torsion:	0,35 mm/m
Angular torsion:	0,2 mm/40 mm
Parallelity:	0,2 mm
Alloy:	EN AW 6063-T66
Anodizing quality:	E6 EV1, 25-40 µm other qualities by inquiry.

Clean room classification:

VDI 2083, class 4
ISO 14644-1, class 6
US Federal Standard 209E, class 1.000
QLZ,QLZE, ELHZ and ELVZ

Mechanical efficiency, positioning and repeating accuracy are coordinated in an optimal way.

We offer the complete automation technology in a modular system together with a wide range of accessories.

Our positioning modules can be combined to all positioning duties. They are constructed by computer-aided design and so very user-oriented.

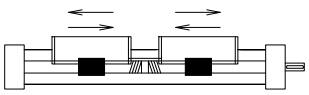
Product line overview

Positioning system
EGT/EGK 30, 40, 60, 80

Mechanical system with plastic prismatic guides. System is driven by an integrated trapezoidal thread or ballscrew.

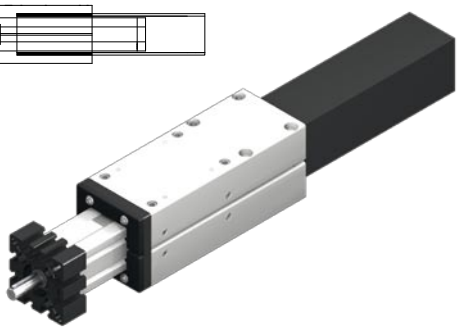
Variation:



Repeating accuracy:
Trapezoidal thread: ± 0,2 mm
Ballscrew: ± 0,025 mm
Velocity:
Trapezoidal thread: v ≤ 0,5 m/s
Ballscrew: v ≤ 1 m/s

Positioning system
EGTH/EGKH 40, 60, 80

Mechanical telescopic system with plastic prismatic guides. System is driven by an integrated trapezoidal thread or ballscrew. Result is a telescopic movement.

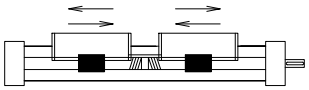


Repeating accuracy:
Trapezoidal thread: ± 0,2 mm
Ballscrew: ± 0,025 mm
Velocity:
Trapezoidal thread: v ≤ 0,5 m/s
Ballscrew: v ≤ 1 m/s

Positioning system
ELT/ELK 30, 40, 60, 60S, 80, 80S,100, 125

Mechanical system with roll guides outside of profile. System is driven by an integrated trapezoidal thread or ballscrew.

Variation:

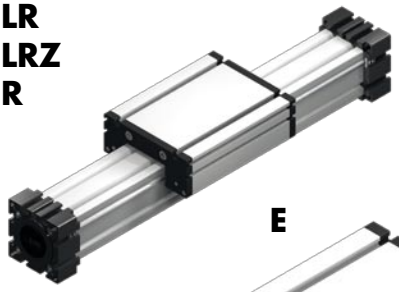


Repeating accuracy:
Trapezoidal thread: ± 0,2 mm
Ballscrew: ± 0,025 mm
Velocity:
Trapezoidal thread: v ≤ 0,5 m/s
Ballscrew: v ≤ 1 m/s

Non-driven positioning systems
ELR 30, 40, 60, 60S, 80, 80S, 100, 125
ELRZ 30, 40, 60, 60S, 80, 80S, 100, 125
ER 30, 40, 60, 60S, 80, 80S, 100, 125

Mechanical system with roll guides outside of profile.

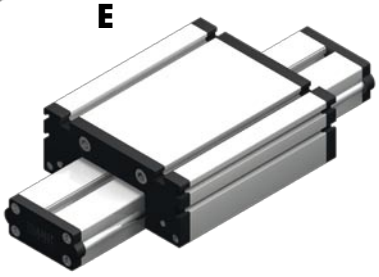
ELR
ELRZ
ER



E 40, 60, 60S, 80, 80S

Mechanical system with roll guides outside of profile.

E



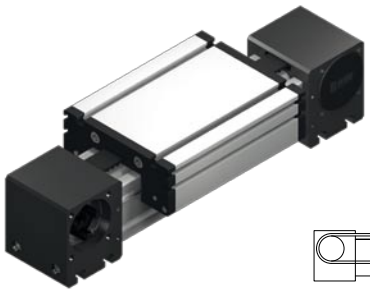
UL 40, 60, 80

Mechanical system with roll guides inside of profile.

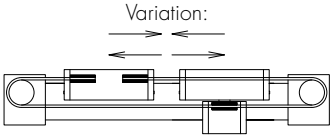
Velocity:
v ≤ 10 m/s

UL

Product line overview



Variation:



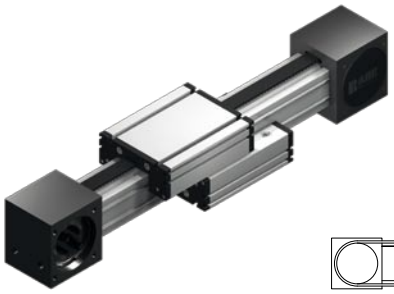
Positioning system
ELZ/ELZex 30, 40, 60, 60S, 80, 80S, 100, 125

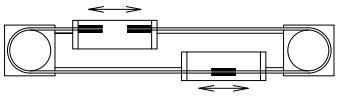
Mechanical system with roll guides outside of profile. System is belt driven.
ELZex like ELZ. The positioning system is suitable for use according to the intended purpose in potentially explosive areas (see ATEX 95 marking).

Positioning system
MLZ 60, 60S, 80, 80S, 100

Mechanical system with roll guides outside of profile.
The system is driven by a belt that is guided inside the profile.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 10 m/s (ELZex: v ≤ 1m/s, MLZ: v ≤ 8 m/s)

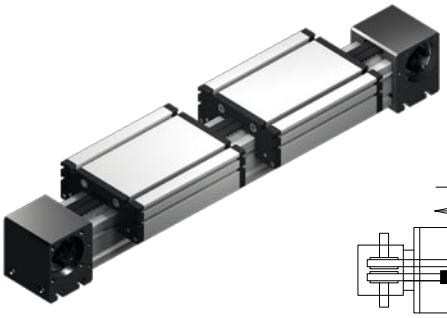


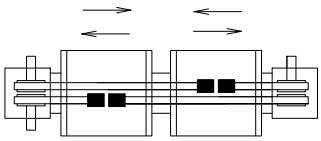


Positioning system
ELZG 30, 40, 60, 60S, 80, 80S

Mechanical system with 2 roll guides outside of profile. System is driven by one rotating timing belt. At each end of this belt a carriage is fixed. Result is two carriages moving in opposite direction over the complete length of the leading the profile.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 10 m/s

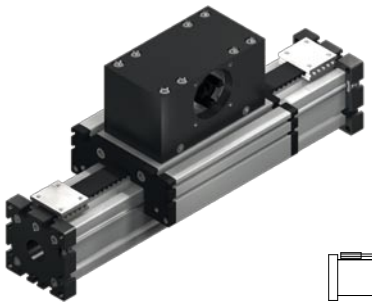


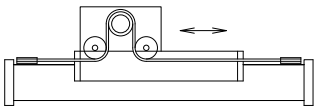


Positioning system
ELZZ 60, 60S, 80, 80S, 100, 125

Same function as ELZ, but each carriage with separate drive. Divided pulleys have separate bearings, so two parallel moving belts are connected each with one carriage.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 5 m/s

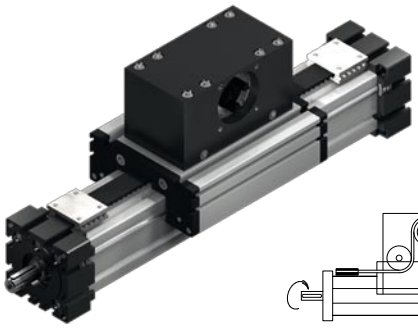


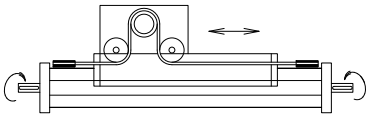


Positioning system
ELSZ 30, 40, 60, 60S, 80, 80S, 100, 125

Same function as ELZ, but with driven carriage.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s





Positioning system
ELSD 40, 60, 60S, 80, 80S, 100

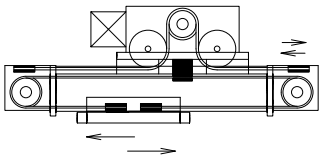
Same function as ELSZ. An additional turning shaft is integrated into the leading profile. Grippers and other components can be adapted to the shaft.

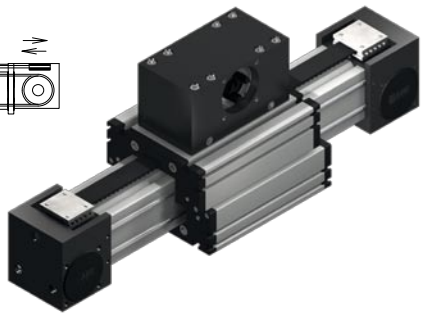
Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

Product line overview

Positioning system
ELZT 40, 60, 60S, 80, 80S, 100

Same function as ELZ. Two carriages are moving in different directions. Result is a telescopic movement.

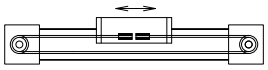




Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

Positioning system
ELHZ 60, 60S, 80, 80S, 100, 125

Mechanical system with roll guides outside of profile. System is driven by an internal belt. Position of shaft is horizontal to the carriage.

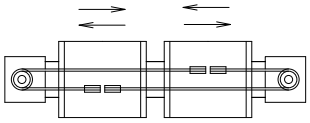


Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 8 m/s

Positioning system
ELVZ 60, 60S, 80, 80S, 100, 125

Mechanical system with roll guides outside of profile. System is driven by an internal belt. Position of shaft is vertical to carriage.

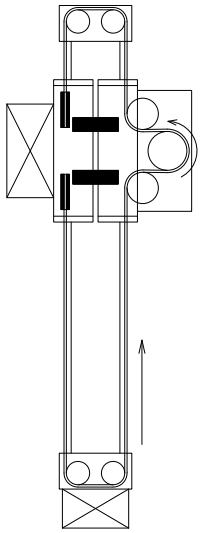
Variation:



Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 8 m/s

Positioning system
ELFZ 60S, 80S, 100, 125

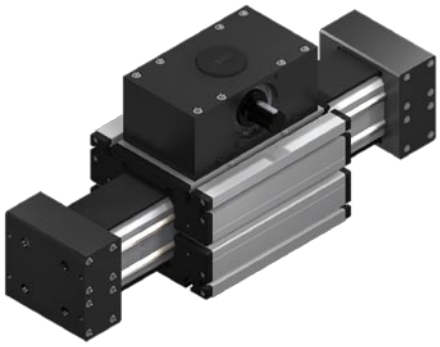
Special lifting system with roll guides outside of profile. System is driven by one rotating timing belt with one drive. The function corresponds to a simple pulley block.



Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 4 m/s

Positioning system
ELFZex 60S, 80S, 100, 125

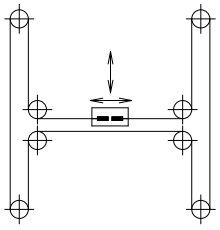
Special lifting system with roll guides outside of profile. System is driven by one rotating timing belt with one drive. The function corresponds to a simple pulley block. This system is additionally ATEX95 certified.



Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 1 m/s

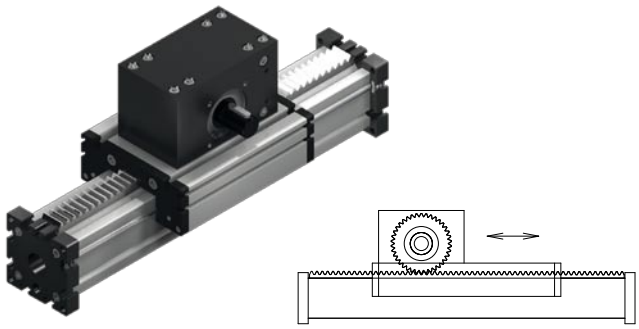
Positioning system
ELZU 30, 40, 60, 60S, 80, 80S, 100

Surface portal, consisting of 2 Y-axes and 1 X-axis, driven by one rotating belt. This belt runs around different deflection pulleys. Positioning is achieved by two motors. The coordinate is diagonal to the deflection points of the Y-axes.
Advantage: Only small masses are moved, so that high acceleration can be realized.



Repeating accuracy: ± 0,1 mm
Velocity: v ≤ 6 m/s
Acceleration: max. 20 m/sec²

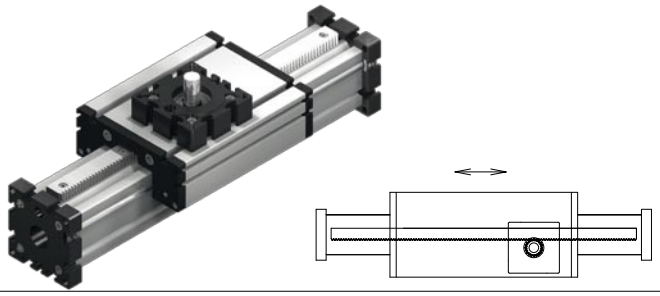
Product line overview



Positioning system
ELZA 40, 60, 60S, 80, 80S, 100

Same function as ELSZ. A rack is mounted onto the leading profile. A pinion gear is fitted to the carriage.

Repeating accuracy:
± 0,2 mm
Velocity:
v ≤ 3 m/s



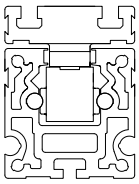
Positioning system
ELZQ 60, 80, 80S

Special lifting unit with function as ELZA. High dynamic and accuracy is achieved by a precision rack and pinion.

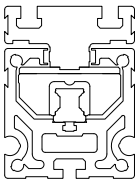
Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 3 m/s

Fraunhofer IPA TESTED DEVICE Lineareinheit QLZ 80 Report No. BA 0005-171

QL



QS



Positioning system
QSZ 60, 80, 100, 125

Mechanical system with an integrated ball rail inside of profile. System is driven by a timing belt which is guided within the profile. This unit is suitable for cleanroom applications (Clean room classification: VDI 2083, class 4; ISO 14644-1, class 6; US Federal Standard 209E, class 1.000

Positioning system
QSRZ 60, 80, 100, 125

Same function as QSZ, but without drive.

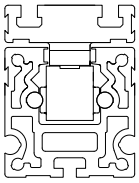
Positioning system
QLZ 60, 80, 100

Mechanical system with roll guides inside of profile. System is driven by a belt which is guided within the profile.

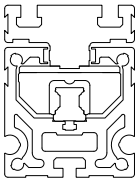
Repeating accuracy:
± 0,1 mm

Velocity:
v ≤ 6 m/s

QL



QS



Non-driven positioning system
QLR 60, 80, 100

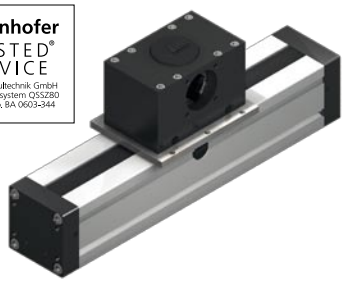
Mechanical system with roll guides inside of profile.

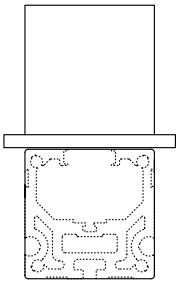
Non-driven positioning system
QSR 60, 80, 100, 125

Mechanical system with an integrated ball rail inside of profile.

Velocity:
v ≤ 6 m/s

Fraunhofer IPA TESTED® DEVICE Bahr Modultechnik GmbH Positioniersystem QSSZ80 Report No. BA 0603-344





Positioning system
QSSZ 60, 80

Same function as QSZ, but with driven carriage.

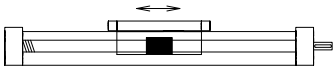
Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

Product line overview

Positioning system
QST/QSK 60, 80, 100

Mechanical system with an integrated ball rail inside of profile. System is driven by an integrated trapezoidal thread or ballscrew.

Repeating accuracy:
Trapezoidal thread: ± 0,2 mm
Ballscrew: ± 0,025 mm
Velocity:
Trapezoidal thread: v ≤ 0,5 m/s
Ballscrew: v ≤ 1 m/s



Non-driven positioning system
QSSR 60, 80, 100

Mechanical system with an integrated ball rail inside of profile.

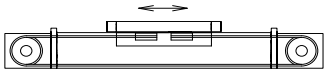
Positioning system
DLZ 120, 160, 200

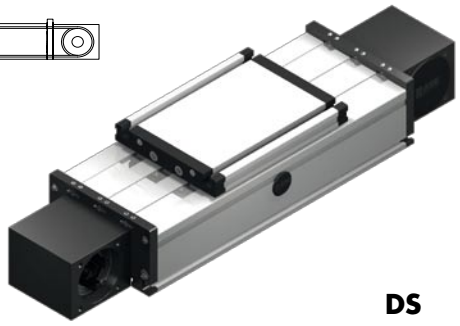
Mechanical system with roll guides inside of profile. System is driven by an internal belt.

Positioning system
DSZ 120, 160, 200

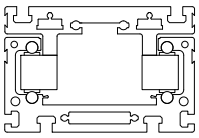
Mechanical system with a double integrated ball rail inside of profile. System is driven by an internal belt.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

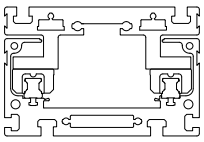




DL



DS



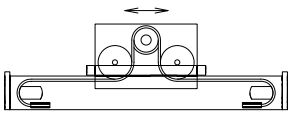
Positioning system
DLSZ 120, 160, 200

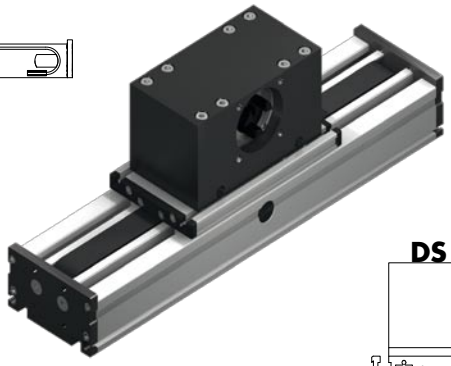
Mechanical system with roll guides inside of profile.
Same function as DLZ but with driven carriage.

Positioning system
DSSZ 120, 160, 200

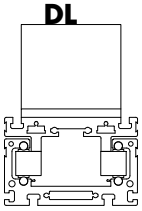
Mechanical system with a double integrated ball rail inside of profile.
Same function as DSZ but with driven carriage.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

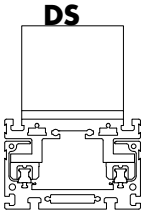




DL



DS

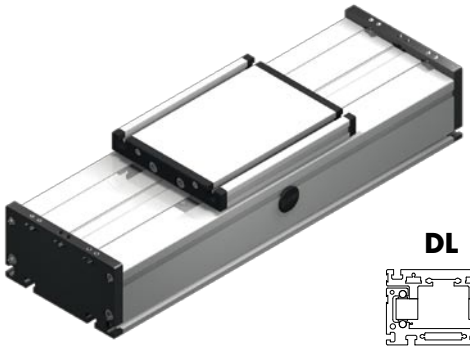


Positioning system
DLVZ 120, 160

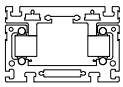
Mechanical system with roll guides inside of profile. System is driven by an internal belt. Position of shaft is vertical to carriage.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 6 m/s

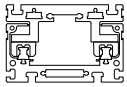
Product line overview



DL



DS

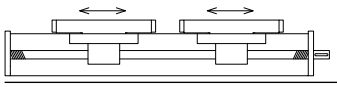


Positioning system
DLR 120, 160, 200
Mechanical system with double roll guides inside of profile.

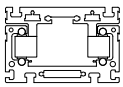
Positioning system
DSR 120, 160, 200
Mechanical system with double roll guides inside of profile.

Velocity:
v ≤ 6 m/s

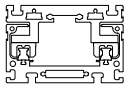
Variation:



DL



DS



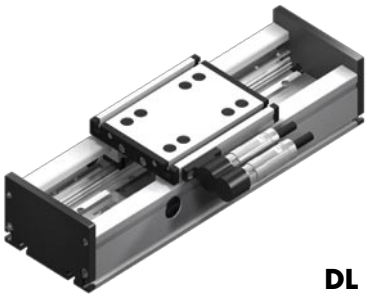
Positioning system
DLT/DLK 120, 160, 200
Mechanical system with double roll guides inside of profile. System is driven by an integrated trapezoidal thread or ballscrew.

Positioning system
DST/DSK 120, 160, 200
Mechanical system with a double integrated ball rail inside of profile. System is driven by an integrated trapezoidal thread or ballscrew.

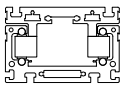
Repeating accuracy:		**Velocity:**
Trapezoidal thread:	± 0,2 mm	v ≤ 0,5 m/s
Ballscrew:	± 0,025 mm	v ≤ 1 m/s

Positioning system
DLZA 120, 160, 200
Rack and pinion system for high dynamic operations.

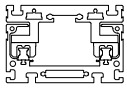
Repeating accuracy:
± 0,2 mm
Velocity:
v ≤ 3 m/s



DL



DS

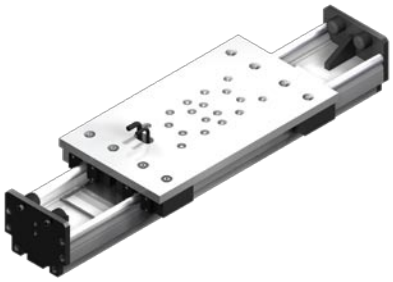


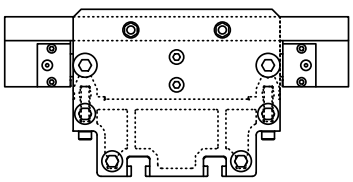
Positioning system
DLM/DLVM 120, 160, 200
Mechanical system with double roll guides inside of profile. Driven by linear motor.

Positioning system
DSM 160, 200

Mechanical system with a double integrated ball rail inside of profile. Driven by linear motor.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 8 m/s





Positioning system
ALLM 203, 204
Mechanical system with roll guides outside of profile.
Driven by linear motor.

Non-driven positioning system
ALLR 203, 204
Mechanical system with roll guides outside of profile.

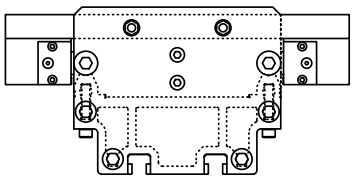
Repeating accuracy:
± 0,05mm
Velocity:
v ≤ 8 m/s

Product line overview

Positioning system
ALLZ 203, 204

Mechanical system with roll guides outside of profile.
Belt driven

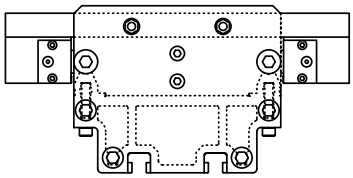
Repeating accuracy:
± 0,1mm
Velocity:
v ≤ 5 m/s



Positioning system
ALLZQ 203, 204

Mechanical system with roll guides outside of profile.
Rach and pinion driven

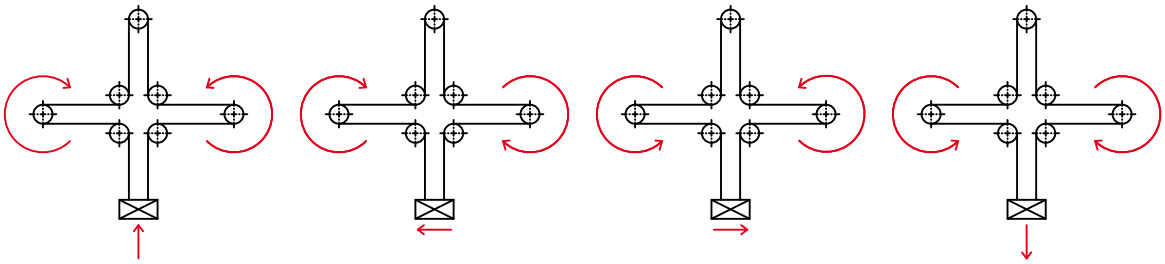
Repeating accuracy:
± 0,1mm
Velocity:
v ≤ 5 m/s



Positioning system
ELZI 40, 60

X/Z gantry consisting of a double guide in the horizontal X level and a vertical Z axis. The unit is driven by a rotating belt, which remains connected through various deflection points.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 5 m/s



Positioning system
DSB 200

Mechanical system with a double integrated ball rail inside of profile, wich can absorbed the high moments. The drive is a highly dynamic short stroke linear motor.

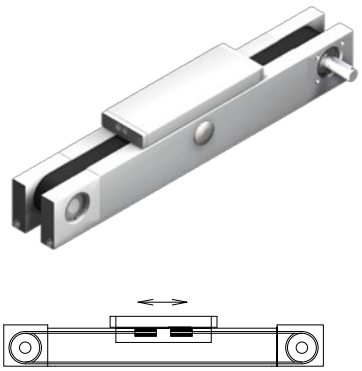
Repeating accuracy:
± 0,1 mm
Velocity:
mass dependent

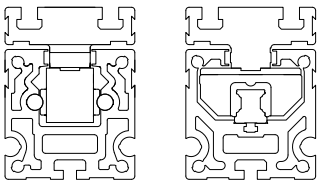
Positioning system
ELBZ R800

Based on the EL series. This bow system is available with a radius of min. 800 mm. The system is driven by a carriage on an external belt.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 1 m/s

Product line overview





Fraunhofer IPA TESTED DEVICE Lineareinheit QLZ 80 Report No. BA 0005-171

Positioning system QSZE 60, 80, 100

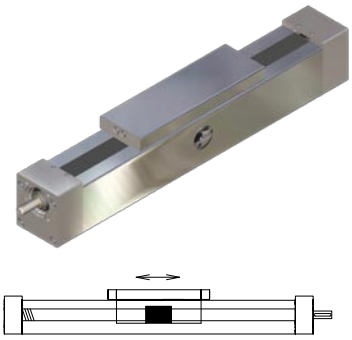
Like QSZ, but enclosed with a stainless steel casing and components.

product design award 2011

Positioning system QLZE 60, 80, 100

Like QLZ, but enclosed with a stainless steel casing and components.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 4 m/s



Fraunhofer IPA TESTED DEVICE Lineareinheit QLZ 80 Report No. BA 0005-171

Positioning system QST/KE 60, 80, 100

Like QST/K, but enclosed with a stainless steel casing and components.

Repeating accuracy:
Trapezoidal thread: ± 0,2 mm
Ballscrew: ± 0,025 mm
Velocity:
v ≤ 0,5 m/s
v ≤ 1 m/s

Positioning system RHT/K 80 A

Mechanical system with internal guides. System is driven by an integrated trapezoidal thread or ballscrew. The guiding and drive elements are integrated into a Alumium housing. The piston rod is made of hardened and ground steel or Stainless steel.

Positioning system RHT/K 80 V

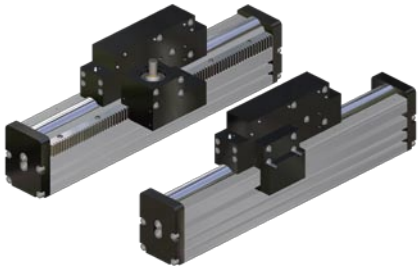
Like RHT/K 80A, but enclosed with a stainless steel housing.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 0,2 m/s

Positioning system HDT/K 16

Combined lifting/rotating unit, for sorting light-weighted components very quickly.

Repeating accuracy:
± 0,1 mm
Velocity:
v ≤ 1 m/s



Positioning system SLTR/SLTZA 30, 50

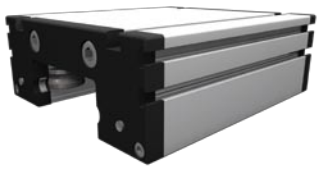
Heavy Duty Traverse without drive (SLTR) and with rack and pinion drive (SLTZA)

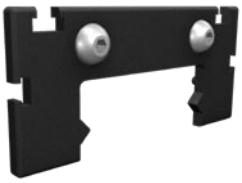
Repeating accuracy:
± 0,1mm
Velocity:
v ≤ 5 m/s

Product line overview

Spare parts

Carriages, V-slides, wiper end plates, jointing plates for closed carriage, rollers, end plates, eccentrics, guide rods, cover bands, lubricants, ball- and trapezoidal screws, spindles, leading-nuts, belts, belt pulleys, plug-in shafts, belt adjusters.





Accessories

Slide nuts, handwheels, positional indicators, spindle clamps, carrier clamps, plates, mounting blocks, switch holders, cable cover tubes, cable chains, switches, activating strips, motor adapters, couplings, bevel gears, combination cubes, cover caps, gearboxes, keyed shafts, bellows, toothed pulleys, toothed belts.

Drives

Stepping motors, gears, control units, gearboxes.

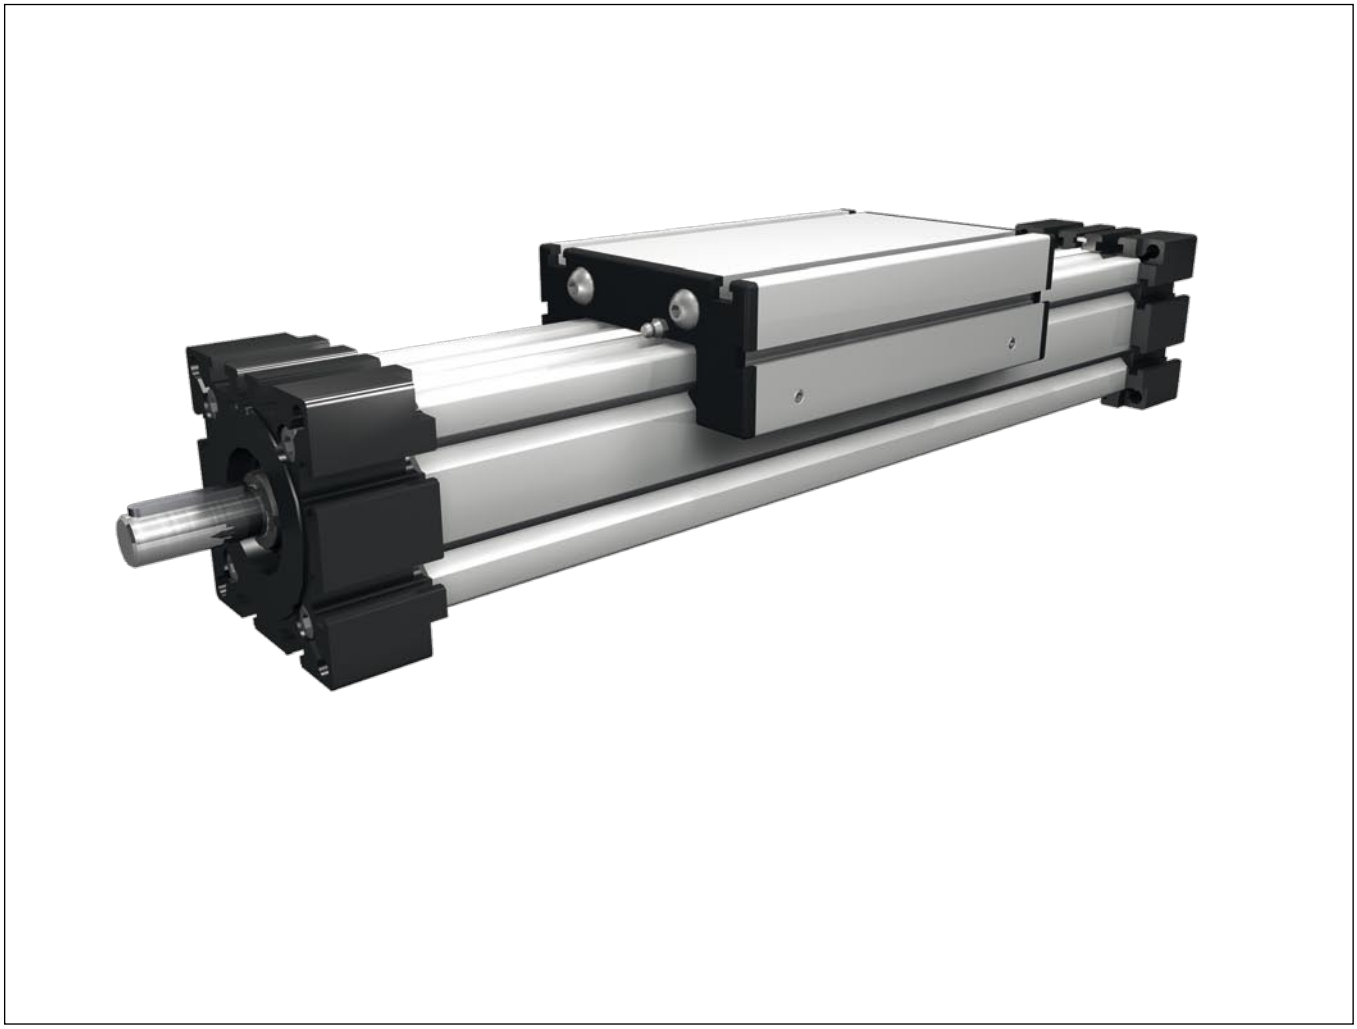
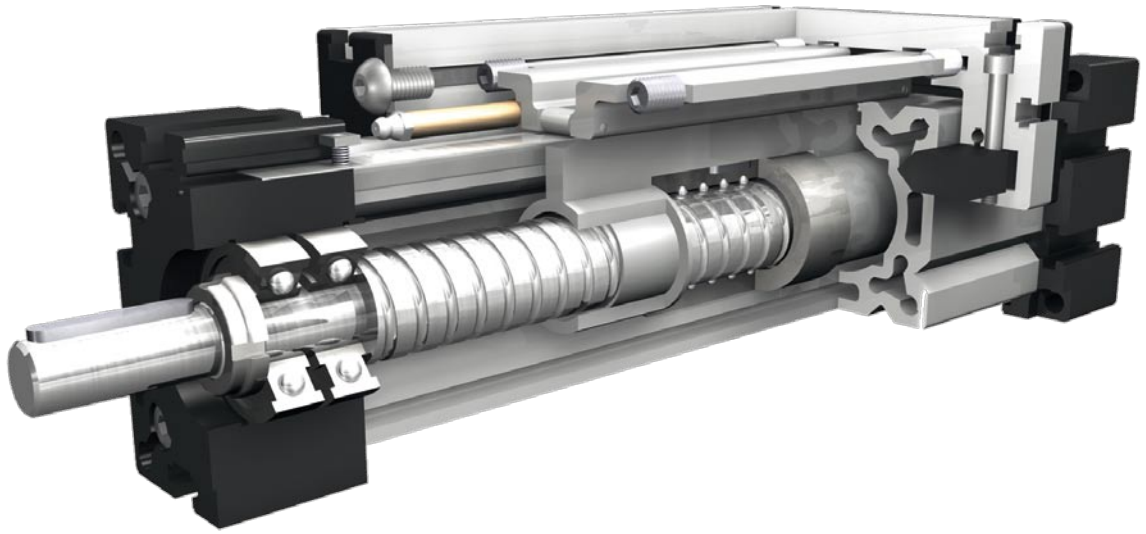
Index



Trapezoidal or ballscrew spindle driven positioning systems EL and EG

Positioning system EGT/EGK 30, 40, 60, 80

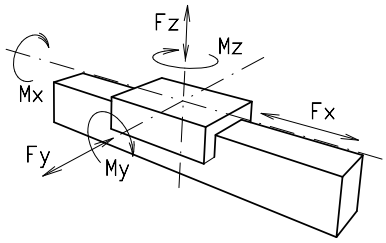
Spindle driven with trapezoidal or ballscrew spindle



Function:
This unit consists of an aluminium square profile with lateral V-guides. The carriage, which is driven by means of a trapezoidal threaded spindle with lead screw, moves along the unit guided by V-slides that are adjustable free of play. Where two linear units are used in parallel or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. The linear opening of the unit is sealed with a stainless steel cover band to make the unit splash-proof and dust-tight.

Fitting position: As required. Max. length 3.000 mm
Carriage mounting: T-slots, tapped holes (size 40)
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.

Forces and torques



Size	EG 30		EG 40		EG 60		EG 80	
Forces / Torques	static	dynamic	static	dynamic	static	dynamic	static	dynamic
F_x (N)	750	600	1500	1200	2500	2000	4200	3500

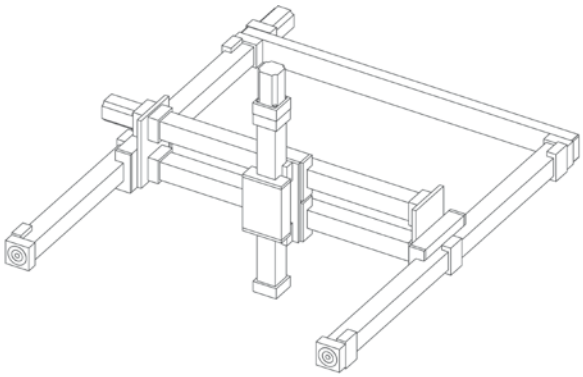
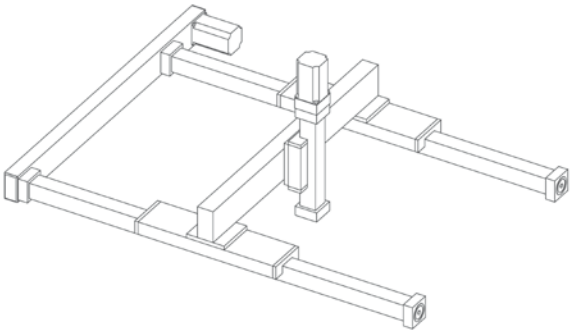
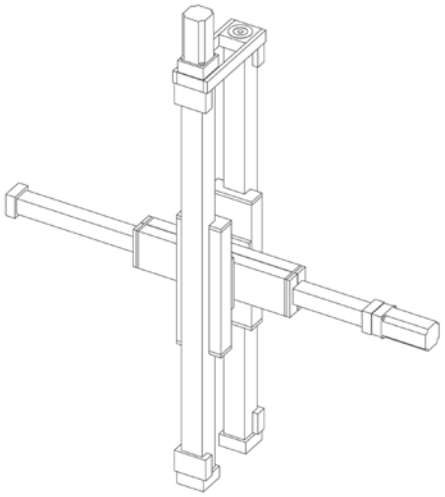
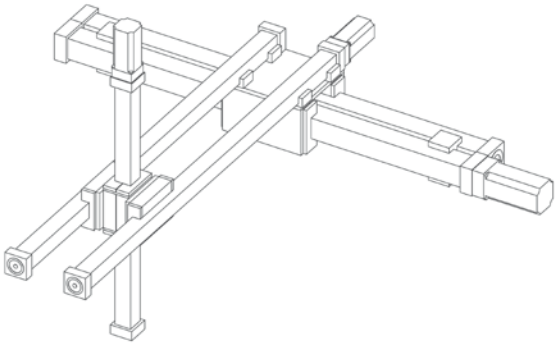
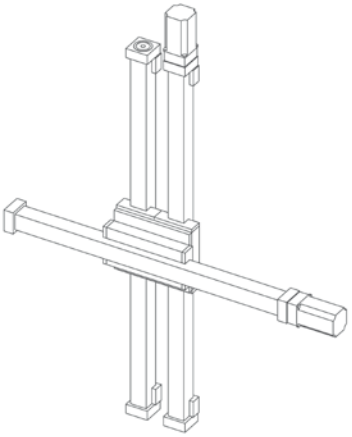
Possible mounting styles

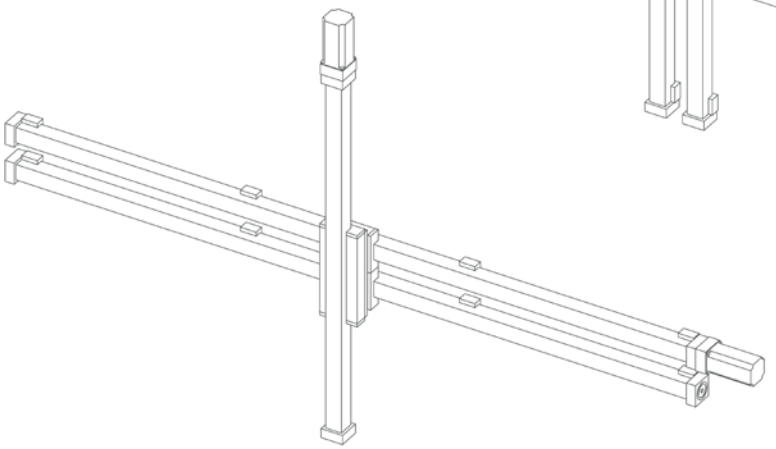


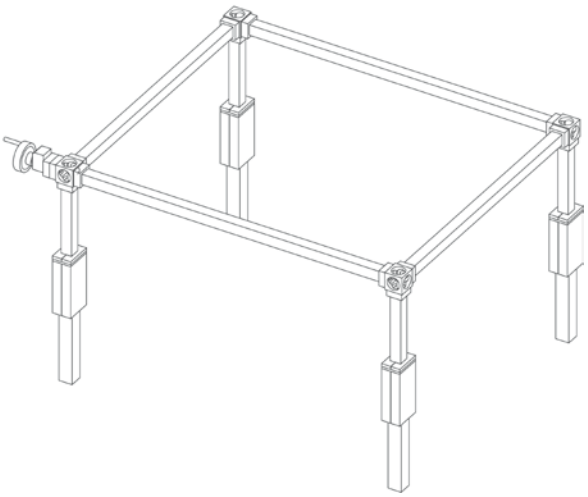












Positioning system EGTH/EGKH 40, 60, 80

Spindle driven with trapezoidal or ballscrew spindle

Function:
The rotary movement of the spindle is translated into a linear motion. Carriage and square tube are connected by a clamping block. The result is a telescopic movement.

Fitting position: As required. Max. length 3.000 mm
Carriage mounting: By T-slots and tapped holes
Unit mounting: By T-slots and tapped holes in the mounting surface.

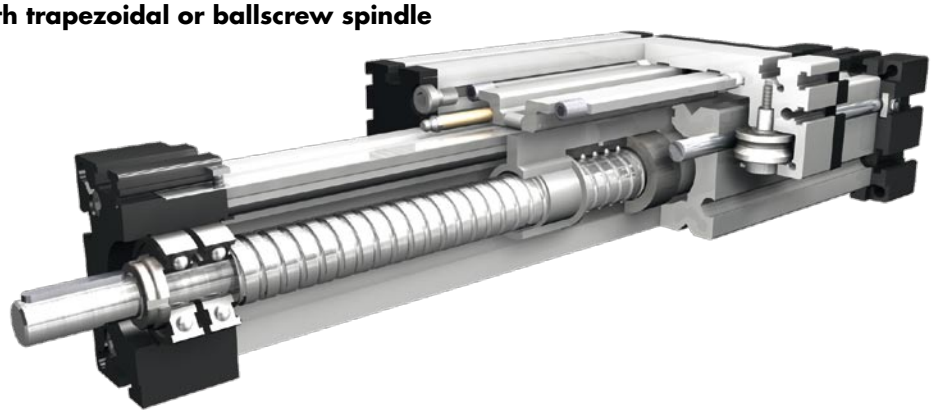
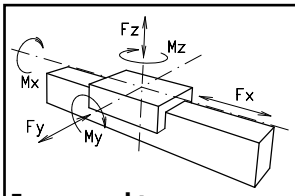
Spindle driven with trapezoidal or ballscrew spindle

Specifications



Function:

This linear unit consists of an aluminium hollow section with integral, parallel ground and hardened steel guide rods. The carriage has play-adjustable ball-bearing rollers which engage with the guide rods. The rotating ballscrew causes linear motion of the ballnut, which is connected to the carriage. The slot necessary for this is covered by a stainless steel strip, making the unit dust- and splash-proof. Lateral adjustment of movement for parallel units, or when two carriages are mounted on one unit, is provided by the ballnut mounting.



Forces and torques

Fitting position: As required, max. length 3.000 mm

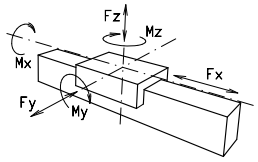
Roller guide unit without drive

Specifications

Function:
This unit consists of an aluminium hollow section with integral, parallel ground and hardened steel guide rods. The carriage has play-adjustable ball bearing rollers which engage with the guide rods. Two bearing blocks without bearings are fitted. Actuation can be by pneumatic cylinder or other device, or the unit may be used as load-carrying linear slide.



Forces and torques

Fitting position: As required, max. length 6.000 mm
Carriage connection: By T-slots and tapped holes
Unit mounting: By T-slots and tapped holes in the mounting surface, mounting sets.

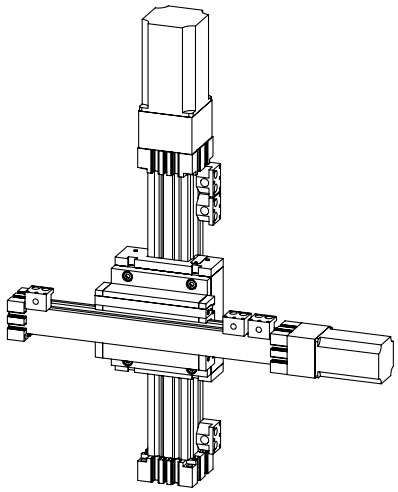
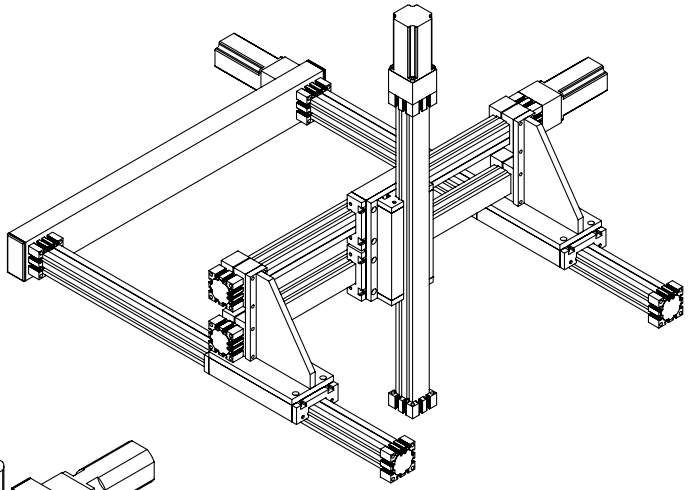
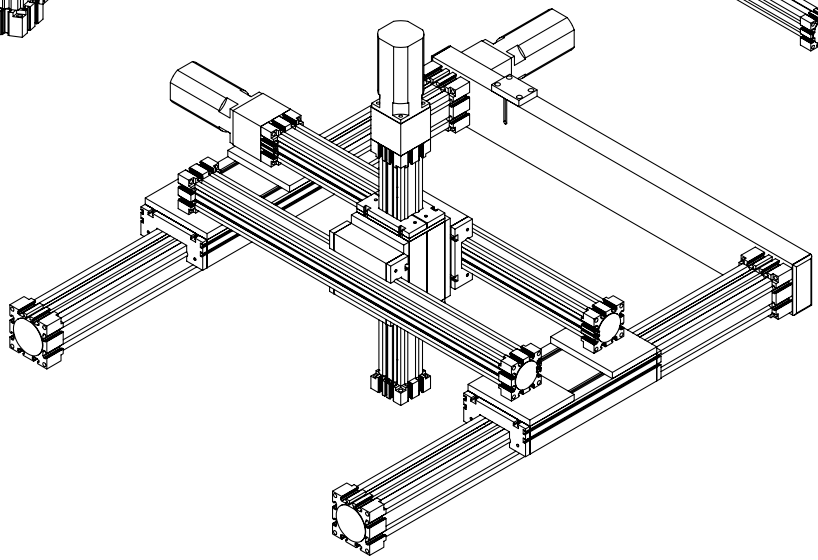
Possible mounting styles



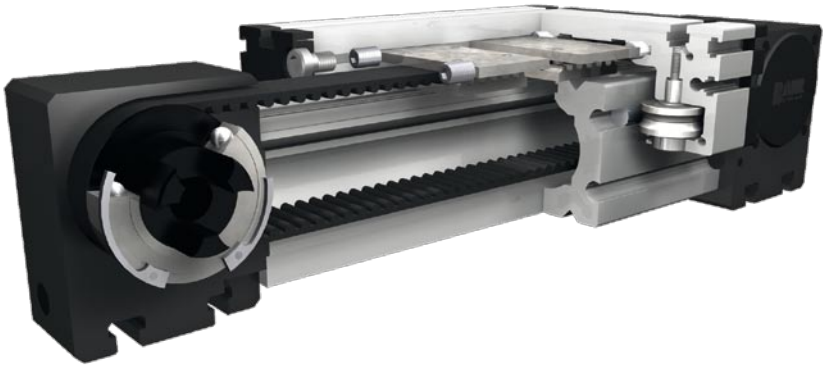




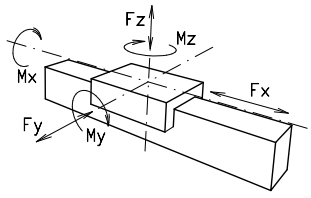
Belt driven positioning systems ELZ, ELZex, ELZG, ELZZ, ELSZ, ELSD, ELZT, ELHZ, ELVZ, ELFZ, ELZU, MLZ

Positioning system ELZ 30, 40, 60, 60S, 80, 80S, 100, 125

Belt drive **Specifications**



Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulleys have maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.



Forces and torques

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

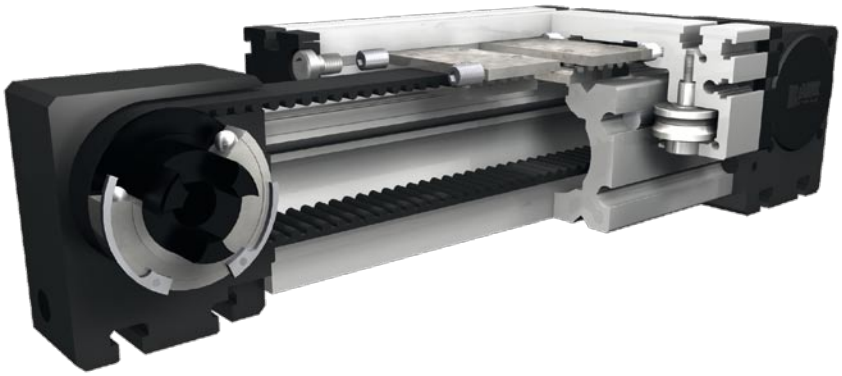
Belt drive



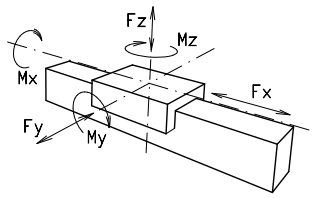
Specifications

ATEX 95
Ex II 2G c IIB T4
Ex II 3D T125°C

Function:
Like ELZ. The positioning system is suitable for use according to the intended purpose in potentially explosive areas (see ATEX 95 marking). An operating manual is included in the scope of delivery. The system is certified for the following areas:

ATEX 95 II 2G EEx c IIB T4:
All application areas except for underground mining. Gas atmosphere category 2, explosion protection category: protection due to secure construction (design security). Equipment group IIB. Temperature class T4=135°C

ATEX 95 II 3D T125°C:
All application areas except for underground mining. Dust atmosphere category 3. Maximum permissible surface temperature: 125°C.



Forces and torques

Fitting position: As required, max. length 6.000 mm.
Carriage mounting: T-slots
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

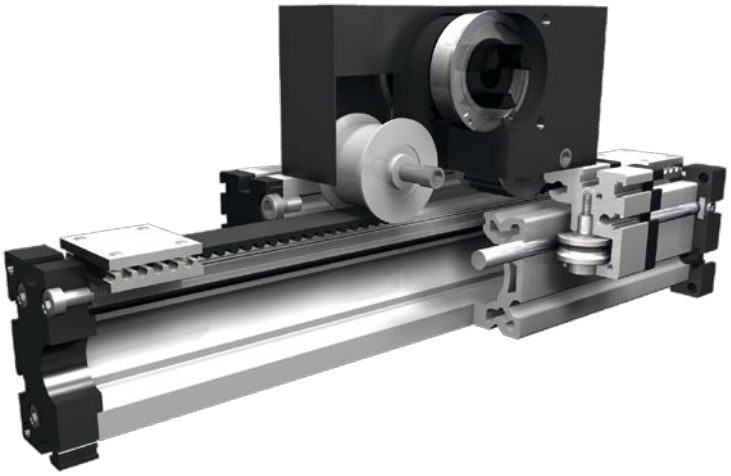
With standard belt

Specifications



Function:

This linear unit consists of an aluminium square profile with hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple tensioning device in one of the end blocks. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing blocks, or mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

For combination kits and connecting elements refer to chapter 2.2

Sample ordering code:
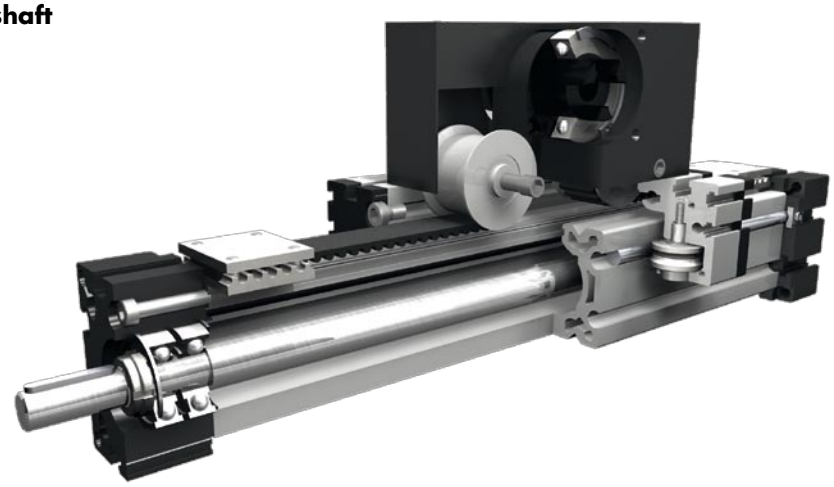
ELSZ 60 with standard body profile, standard carriage with widened belt and coupling claw on one side, 1170 mm stroke.

Positioning system ELSD 40, 60, 60S, 80, 80S, 100

Belt drive with rotary shaft

Specifications



Function:
Same as ELSZ, but with an additional rotary shaft, fitted within the aluminium body. One end can be driven by any suitable motor, and the other end is provided with a shaft with feather key and an axial tapped hole for fitting grippers or other components.

Fitting position: As required. Max. length 2.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing blocks, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

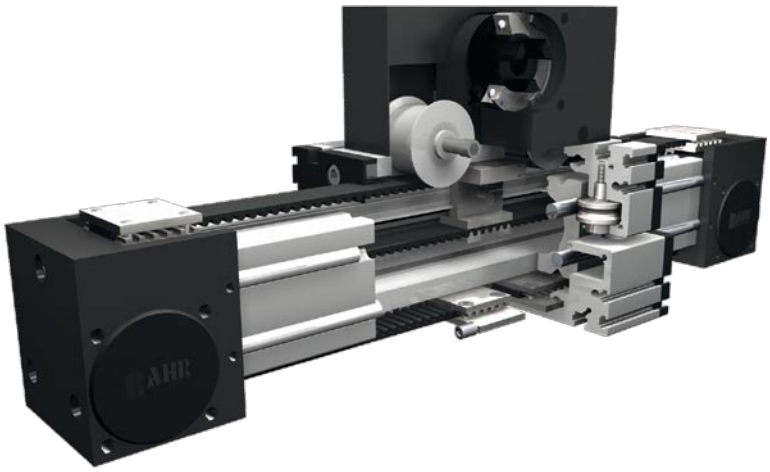
Telescopic belt drive

Specifications



Function:
This unit consists of an aluminium square profile with integrated, hardened steel guide rods. Two carriages, which have internal linear ball bearings that can be adjusted free of play, are driven along the guide rods in opposite directions by 2 belts. The pulleys include maintenance-free ball bearings. One belt is tensioned by a tensioning device within the carriage. The other timing belt is tensioned by a tensioning device within the bearing block. The carriage with the drive block (with motor) is screwed to the crosshead. A T-slot profile is screwed to the carriage as an extension arm which can be adjusted to any length (see functional diagram on page 3/20).

Fitting position: As required. Max. length 3.000 mm.
Unit mounting: By T-slots in the carriage, extension arm
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability +- 0,1 mm.

Fraunhofer IPA TESTED DEVICE Lineareinheit ELHZ 60 Report No. BA 9807-151

Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. Toothed pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.
This linear unit is suitable for application in clean rooms of clean-room classification 1.000 (corresponding to US Fed. Standard 209 E).

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By tapped holes or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

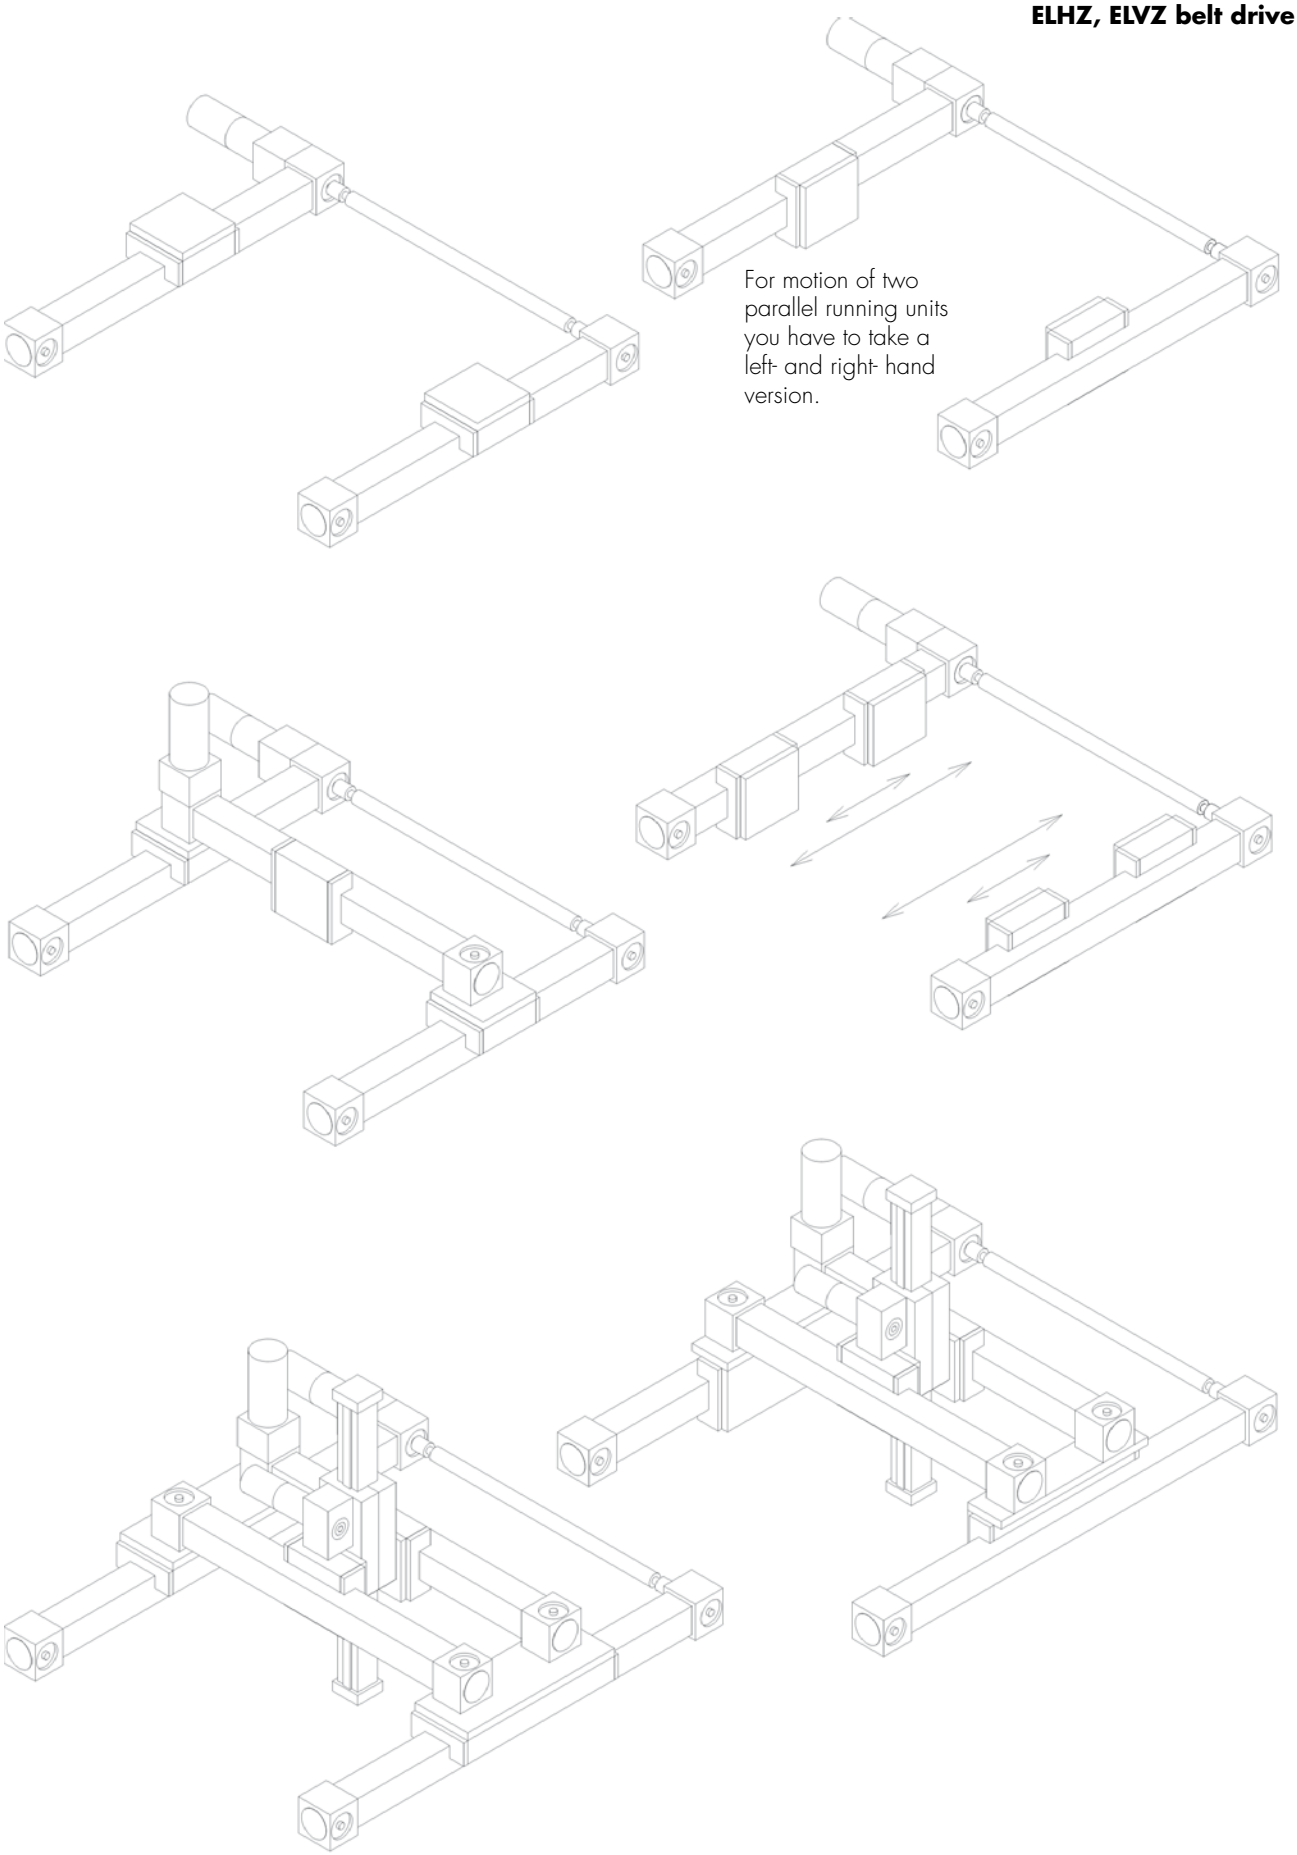
Possible mounting styles

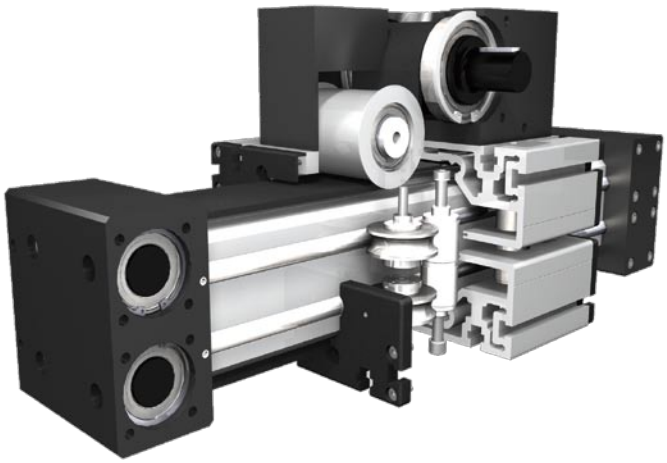
ELHZ, ELVZ belt drive units



For motion of two parallel running units you have to take a left- and right- hand version.

Positioning system ELFZ 60S, 80S, 100, 125

Specifications



Function:
This special lifting unit consists of an aluminium square profile with hardened steel guide rods. The carriages, which have internal linear ball bearings that can be adjusted free of play, are driven along the guide rods by a timing belt. The rotating timing belt pulleys have maintenance-free ball bearings. One rotation of the drive pulley complies with 1/2 linear circumference of the drive pulley. Belt tension can be readjusted by a simple tensioning device in one of the carriages. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required. Max. length without joints 6.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing blocks, or mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

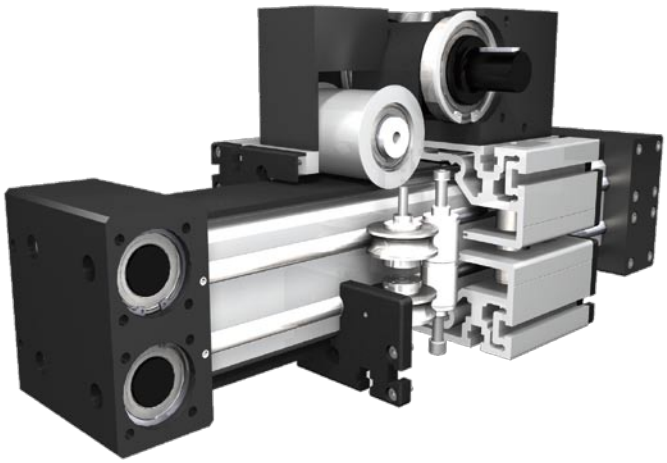
Sample ordering code:
ELFZ 125 with standard body profile, standard carriage, shaft Pos. 1, 940 mm stroke

Positioning system ELFZ Ex 60S, 80S, 100, 125

Specifications

ATEX 95
Ex II 2G c IIB T4
Ex II 3D T125°C



Function:
Like ELFZ. The positioning system is suitable for use according to the intended purpose in potentially explosive areas (see ATEX 95 marking). An operating manual is included in the scope of delivery. The system is certified for the following areas:

ATEX 95 II 2G EEx c IIB T4:
All application areas except for underground mining. Gas atmosphere category 2, explosion protection category: protection due to secure construction (design security). Equipment group IIB. Temperature class T4=135°C

ATEX 95 II 3D T125°C:
All application areas except for underground mining. Dust atmosphere category 3. Maximum permissible surface temperature: 125°C.

Fitting position: As required. Max. length without joints 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing blocks, or mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

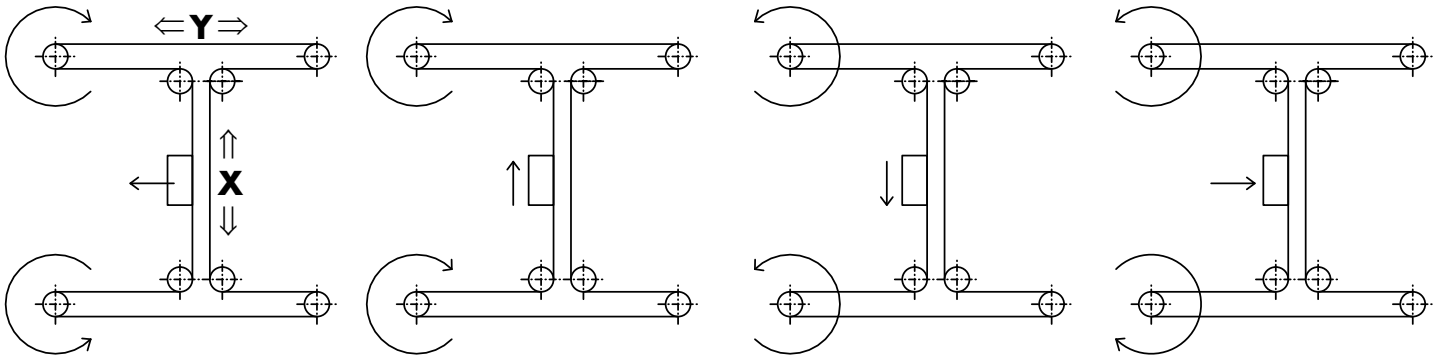
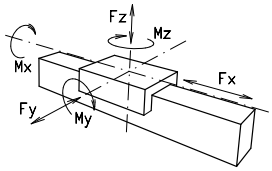
Surface portal **Specifications**



Function:

Surface portal, consisting of 2 Y-axes and 1 X-axis, driven by one rotating belt. This belt runs around different deflection pulleys. Positioning is achieved by two motors. The coordinate is diagonal to the deflection points of the Y-axis.
Advantage: Only small weights are moved, thus enabling high accelerations to be achieved.



Forces and torques

Fitting position: As required. Max. length and width 3.000 mm.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.

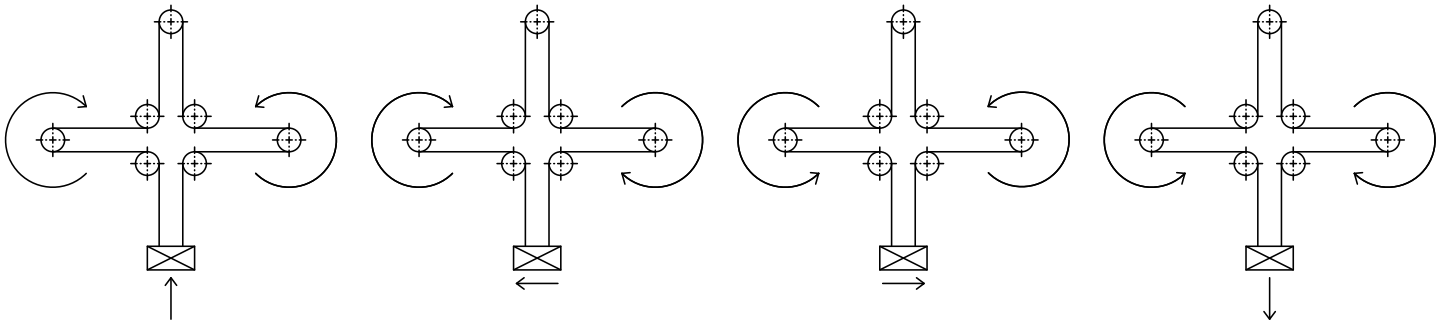
Sample ordering code:
ELZU 60 with standard body profile, standard carriage, coupling claw on one side, stroke X = 1074 / Y = 370 mm

Positioning system ELZI 30, 40, 60



Function:
X/Z gantry consisting of a double guide in the horizontal X level and a vertical Z axis. The belt is fixed and tensioned at the load end.
The unit is driven by a rotating belt, which remains connected through various deflection points. The movement is realised by two motors. The coordinate lies diagonal to the deflection points of the X axes and the Z axis.
Advantage: Only small masses are moved and thus it is possible to achieve high accelerations.

Fitting position: As required, max. length for x-axes 2000mm, for z-axis 1000mm
Unit mounting: By tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

Positioning system ELBZ R800

Specifications

Function:
This linear unit consists of a curved aluminium square profile with hardened steel guide rods. The smallest radius amounts to 800 mm. The carriage which has internal linear ball bearings that can be adjusted free of play is driven along the guide rods by a timing belt. The pulley has maintenance-free ball bearings. Belt tension can be readjusted by a simple tensioning device in one of the end blocks. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position:	As required.
Carriage mounting:	Special drilling
Unit mounting:	By T-slots or tapped holes in the profile nut, or mounting sets.
Belt type:	HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.

Formula: ELBZ
Driving torque:

$$M_a = \frac{F * P * S_i}{2000 * \pi} + M_{leer}$$

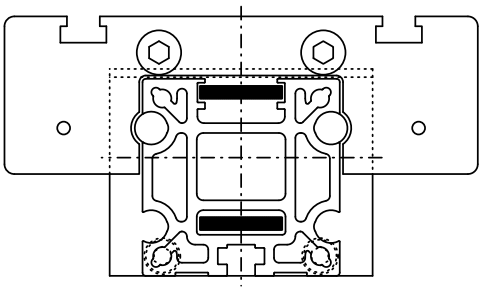
Belt drive

Specifications



Function:
This linear unit consists of an aluminium square profile with integrated, hardened steel guide rods. The carriage, which has internal linear ball bearings, that can be adjusted free of play, is driven along the guide rods by a timing belt. The advantage of this system is that the belt is guided within the profile, ensuring that the belt is always tight and thus enabling the system to be operated e.g. when lying on its side. The pulleys have maintenance-free ball bearings. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.

Fitting position: As required, max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots or tapped holes in the bearing block, mounting sets.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

Belt drive

Function:

This unit consists of a square aluminium profile with an integrated roller guide. The carriage is driven by a timing belt. Each standard pulley includes one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel.
This linear unit is suitable for application in clean rooms of clean-room classification 1.000 (corresponding to US Fed. Standard 209 E).

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt performance: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

* referred to life-time

Formula: QST/K

Driving torque:

$$M_a = \frac{F*P*S_i}{2000*\pi*\mu} + M_{leer}$$

$$P_a = \frac{M_a*n}{9550}$$

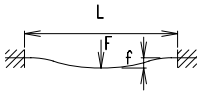
F = force (N)
P = thread pitch (mm)
S_i = safety factor 1,2 … 2
M_{leer} = no-load torque (Nm)
n = rpm of screw (min^{-1})
M_a = driving torque (Nm)
μ = screw efficiency
P_a = motor power (KW)

Efficiency of lead screws:

All ballscrew	0.900
Tr 18x4	0,399
Tr 18x8	0,565
Tr 24x5	0,384
Tr 24x10	0,550
Tr 32x6	0,360
Tr 32x12	0,524

Deflection:

$$f = \frac{F*L^3}{E*I*192}$$



f = deflection(mm)
F = load (N)
L = free length (mm)
E = elastic modulus 70000 (N/mm²)
I = second moment of area (mm⁴)

Nominal lifetime:

$$L = \left(\frac{C}{F}\right)^3 x10^5$$

L = Lifetime in meters
C = Dynamic load factor (N)
F = Medium load (N)

For the diagram for critical speeds of lead screws refer to chapter 5.2 page 3

BAHR Modultechnik

Rail guide

Function:
This unit consists of a square aluminium profile with an integrated ball rail. This unit can be driven by a pneumatic cylinder or other additional drives or it serves as a load carrying slide unit.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on two runner blocks which can be adjusted and serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

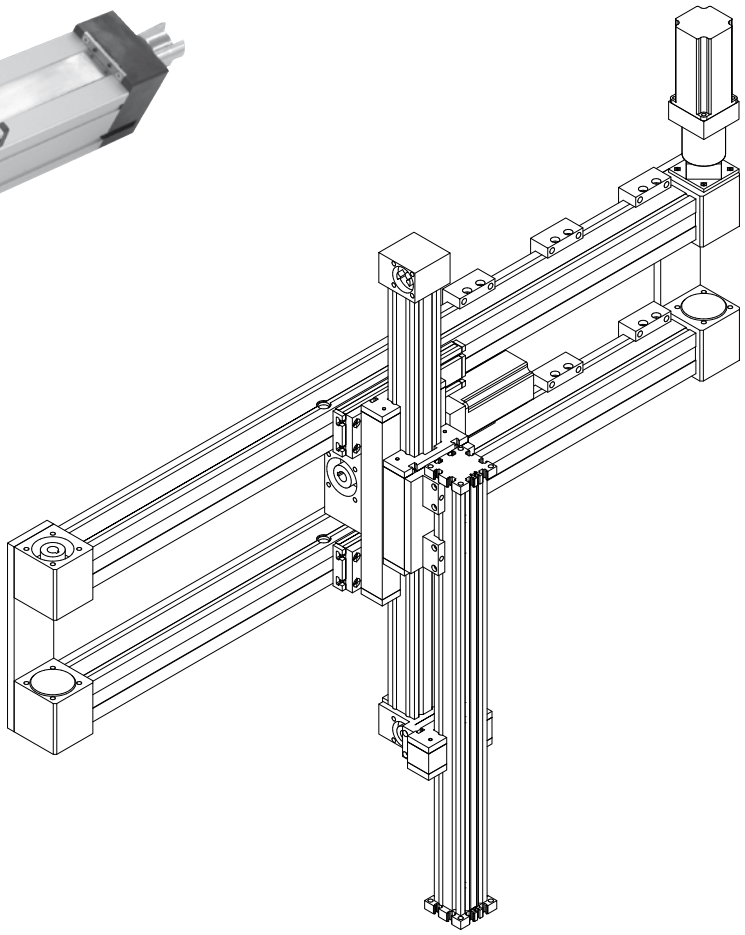
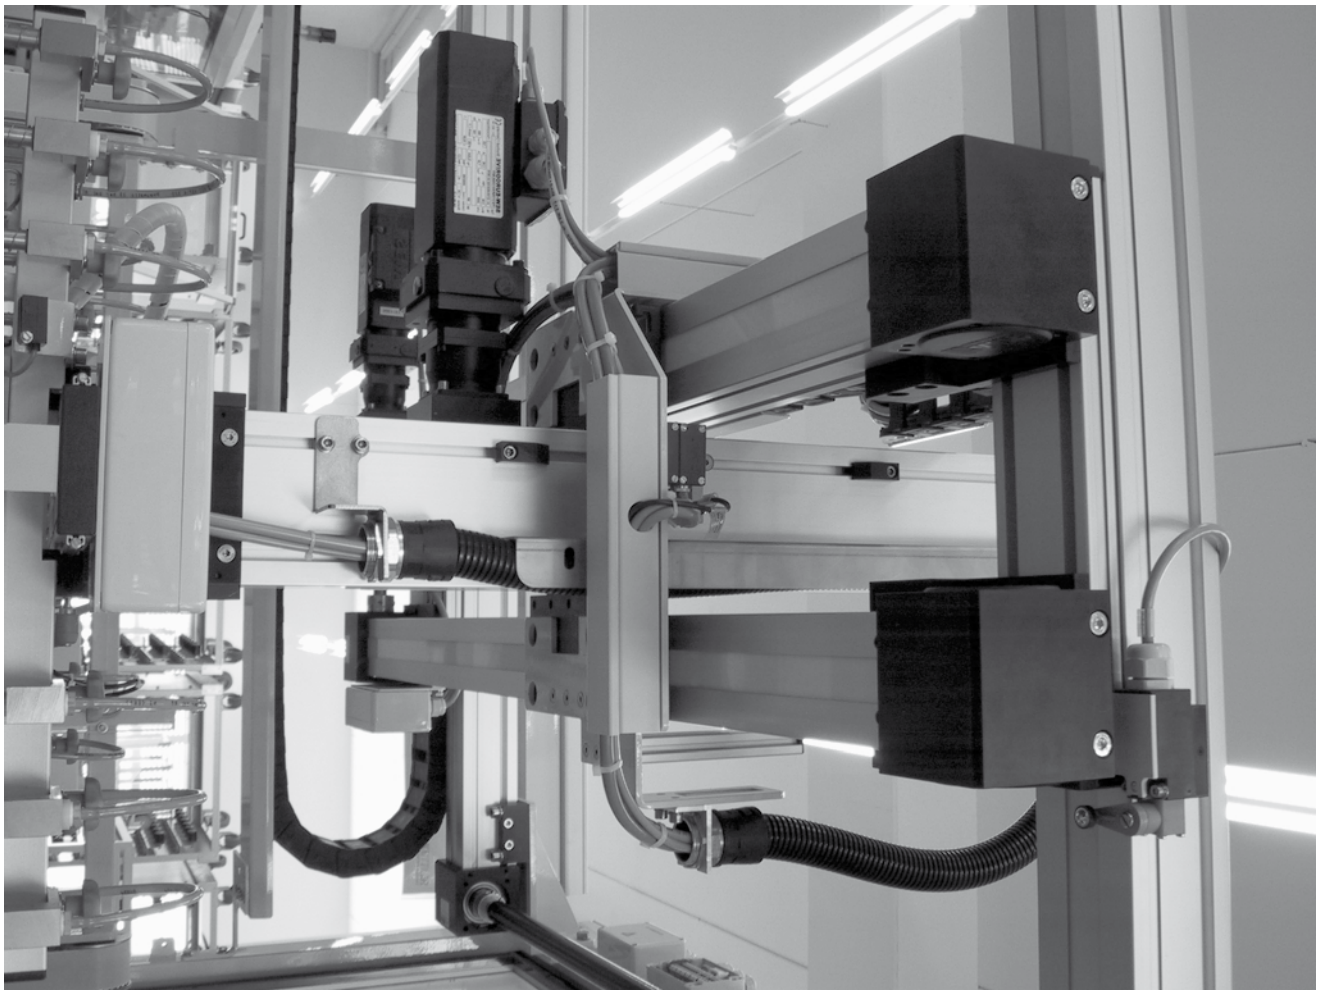
Possible mounting styles

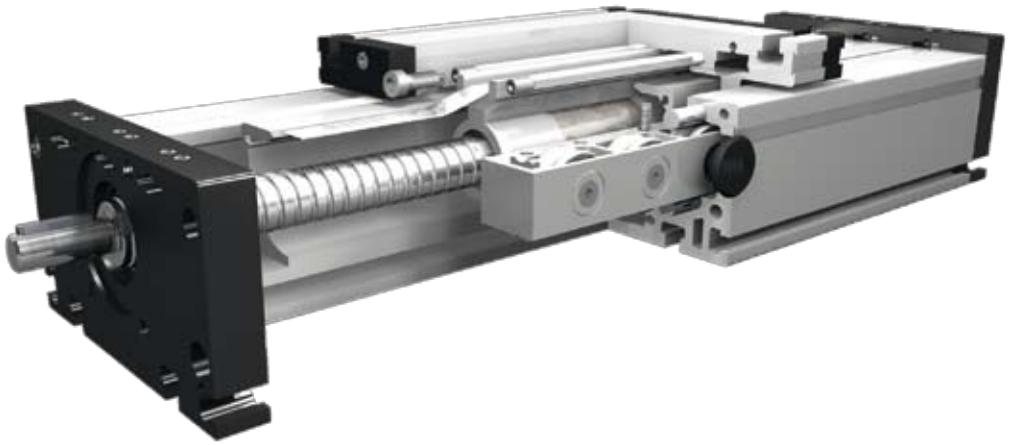




Roller guide positioning systems DL

Positioning system DLT/DLK 120, 160, 200

Spindle drives



Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is driven by means of a rotating spindle with leading nut. Where two parallel linear units are used or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the drive from splash water and dust.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased. Repeatability ballscrew ± 0,025 mm, trapezoidal thread ± 0,2 mm.

Belt drive

Function:

This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is moved by a belt drive. Each standard pulley has got one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

Rack and pinion drive

Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion is equipped with maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Rack: 6h23 Modul 2 (hardened and ground), repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

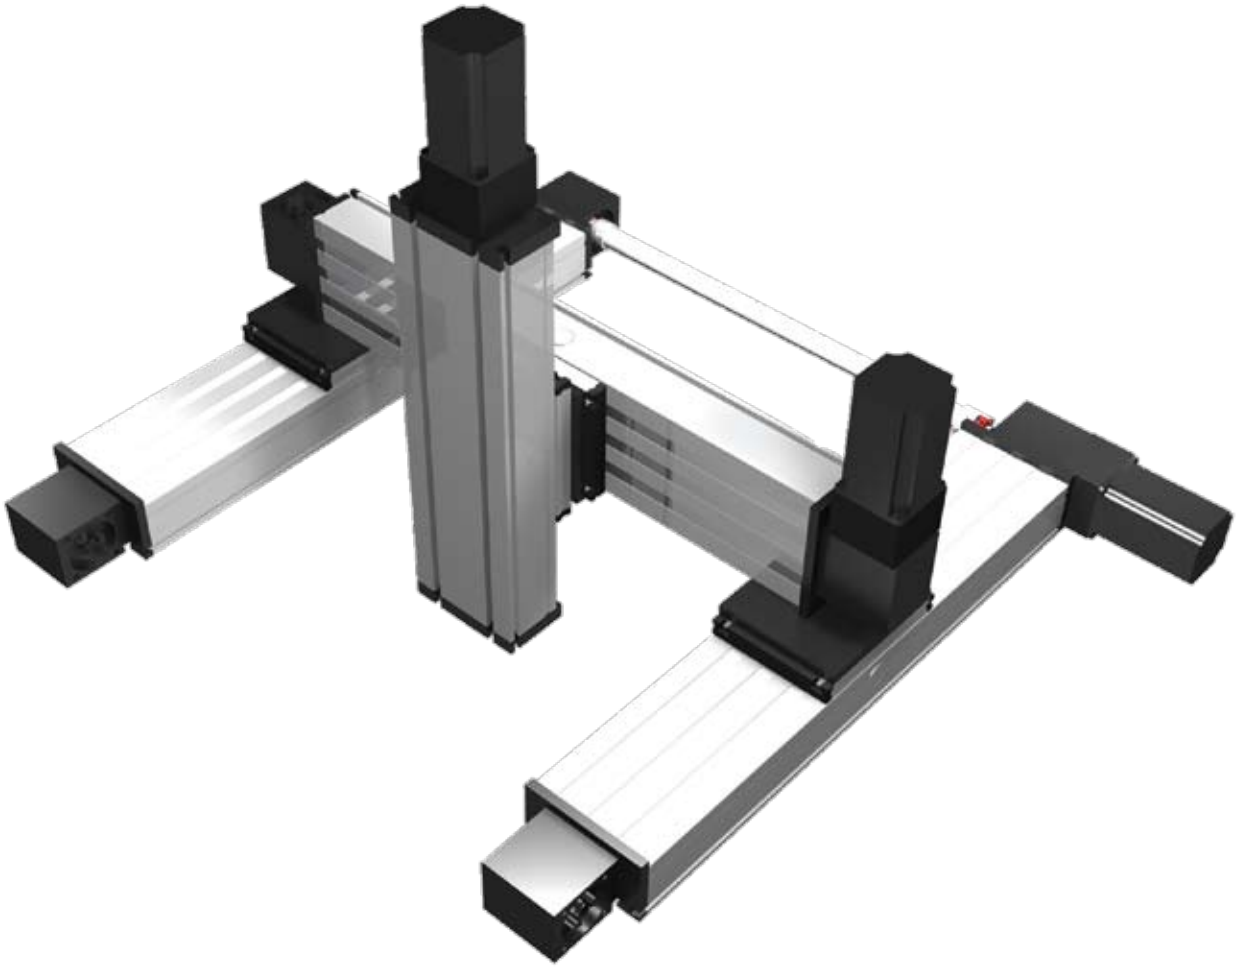
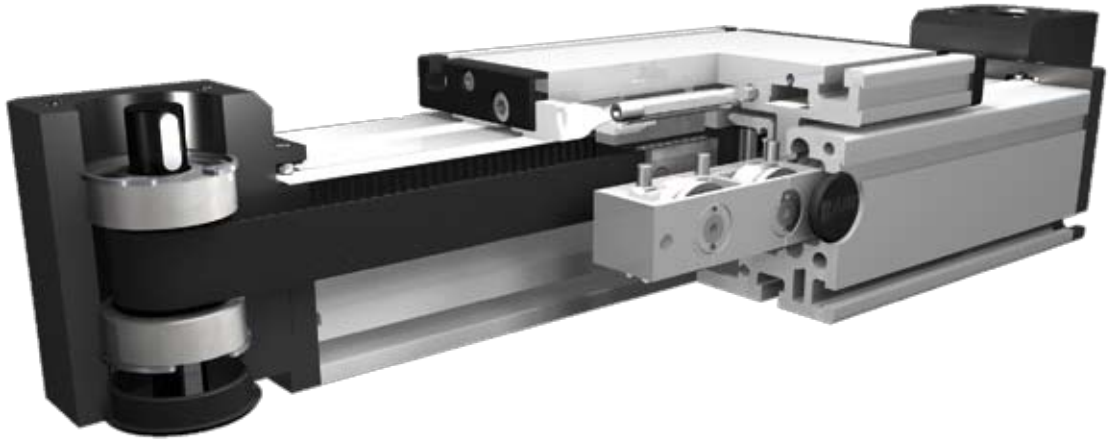
Possible mounting styles

Possible mounting styles



Positioning system DLVZ 120, 160

Internal belt drive



Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The carriage is moved by a belt drive. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

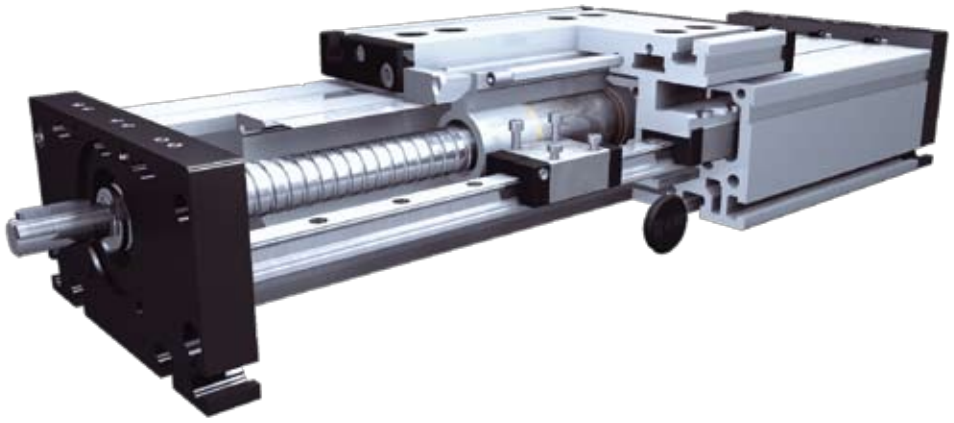
Spindle drives



Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guides. The carriage is driven by means of a rotating spindle with leading nut. Where two parallel linear units are used or where two carriages are mounted on one unit, the leading-nut receiver can be used to adjust the symmetry of the carriages. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the drive from splash water and dust. Another option is to cover the opening with a bellows.

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.
Repeatability: Ballscrew ± 0,025 mm, trapezoidal thread ± 0,2 mm.

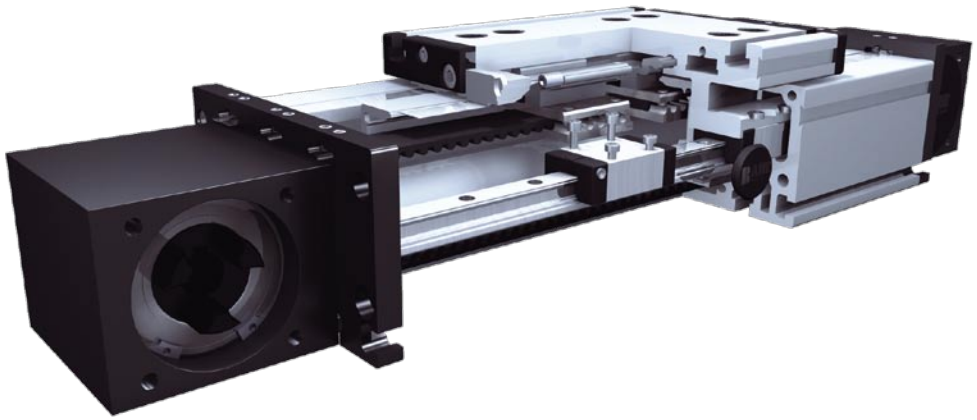
Belt drive



Function:
This unit consists of a rectangular aluminium profile with 2 integrated rail guidess. The carriage is moved by a belt drive. Each standard pulley has got one coupling claw on one side. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. The openings of the guide body are sealed with 3 stainless steel cover bands to protect the guide from splash water and dust. Alternatively, the opening can also be covered with a bellow or can be delivered without cover bands.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.

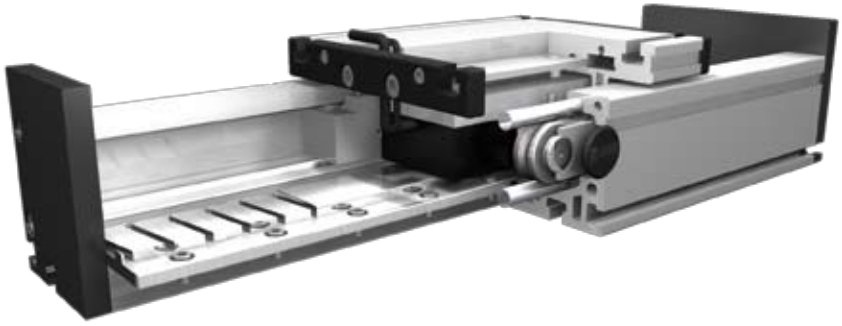
Positioning system DLM 120, 160, 200

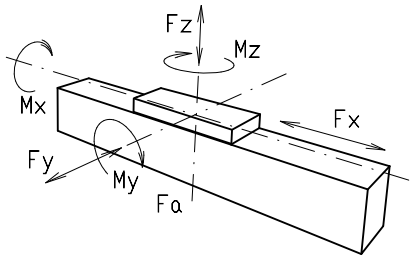
Linear motor drive



Function:
This unit consists of a rectangular aluminium profile with 2 integrated roller guides. The linear motor DLM unit is based on the principle of a linear, synchronous AC motor.
The guiding profile is fitted with permanent magnets as stator (secondary part). The carriage is fitted with the actuator (primary part). The magnetic attraction causes a force between carriage and guiding profile also in the absence of current. This force can be used for the initial tension of the bearings. Several carriages (primary parts) can be driven independently on one guiding profile.

Fitting position: As required. Max. length 6.000 mm without joints.
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 10 or 12 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.
Repeatability ± 0,05 mm. Repeated accuracy max. ± 0,05 bis 4.000 mm, ± 0,1 >4.000 mm.

Forces and torques



F_z = external force by load
F_a = magnetic attraction force
F_{zm} = maximum force in consideration of motor power
$F_{zm} = F_z + F_a$

Sample ordering code:
DSM160, Bahr Modultechnik Linear motor, standard body profile, Measurement system LE100 5V, Plug Pos. 1, motor size 1, 1154 mm stroke

Positioning system DSB 200

Function:
The guide body consists of an aluminium square profile with two rail guides integrated into it, with four, six or eight runner blocks depending on the load and carriage type. The DSB linear motor axis is a highly dynamic short stroke unit, which is based on the principle of a linear three-phase synchronous motor. The secondary part is equipped with permanent magnets and serves as rotor. The primary part as stator has a three-phase winding. The symmetrical design of the motor results in a neutralisation of the magnetic attraction between stator and rotor and thus enables an optimum relief of the bearing. Combined with the elimination of moved cables, this results in an excellent lifetime of the axis. With a max. cooling capacity requirement of 0.5 – 1.0 l of water per minute (depending on the motor size), the temperature will rise by a max. of 10 degrees Kelvin.

Fitting position: As required
Carriage mounting: By T-slots.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 4 runner blocks which can be serviced at a central servicing position. For longer carriages the number of runner blocks can be increased.
Repeatability ± 0,05mm mm. Repeated accuracy max. ± 0,05mm

Magnetic Sensor LE100/1 und Magnetic Band MB100

Specifications:

+ Supply voltage	10,5 - 30 VDC; 5 VDC +/- 5% optional 5 V DC +/- 5%
+ Power consumption	<25 mA @ 24VDC; <50mA @ 5VDC
+ Protection	reverse battery protection
+ Connection	flying leads
+ Material of casing	metal
+ Output circuit	line driver
+ Output signals	sinusA, B, phase-shifted by 90°
+ Output current	I out max. 5 mA per signal path
+ Signal size	approx. 1 Vss
+ Travel speed	max. 5m/s
+ System accuracy	depending on interpolation electronics
+ Gap strip/sensor	0,1 - 0,4 mm (without cover strip)
+ Working temperature	-10....+70 °C
+ Storage temperature	-30....+80°C
+ Interference protection class	3, accord. to ICE 801
+ Test mark	CE
+ System of protection	IP 67 reading S IP 65 reading 90°

Magnetic Sensor LE100/1

Contactlessly measuring scanning unit with integrated analog signal output (sine 1 Vss). Together with the magnetic scale MB100 and a follower interpolation electronics unit, the LE100/1 forms an open linear measuring system.

Features:
+ Easy mounting
+ LED status display
+ Signal period 1000 µm (analog)
+ Scale MB100
+ Reference signal (option)
+ Insensitive to dust, shavings, humidity

Magnetic Band MB100

The magnetic band consists of a magnetic tape magnetized at regular distances and firmly joind with the carrier strip. For mounting a special adhesive tape is pre-mounted

Features:
+ Easy mounting by glueing
+ Insensitive to dust, shavings, humidity...
+ accuracy class 50 µm/1000 mm

Options
+ Stainless stell strip

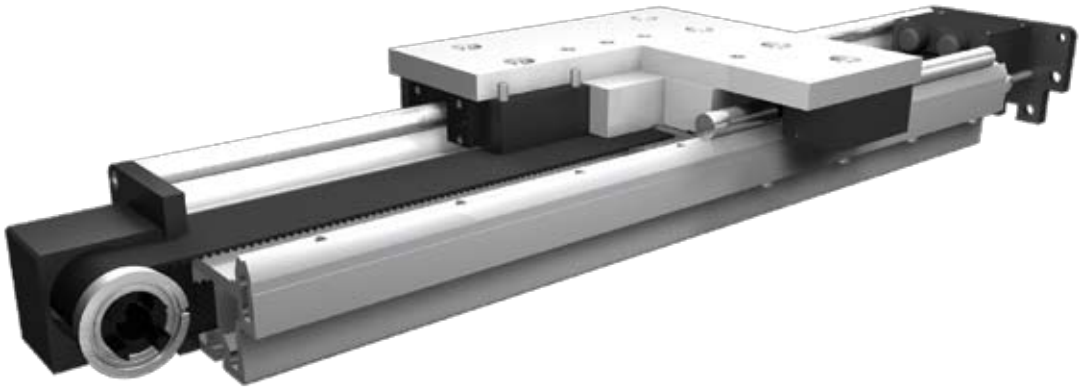
Belt drive



Function:
This unit consists of an aluminium profile with hardened steel guide rods mounted on top of the profile. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a timing belt. The pulleys have maintenance-free ball bearings. Opposite the driven side there is an integrated timing-belt tensioner which can be readjusted by 2 screws.

Fitting position: As required. Max. length 6.400 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.
Repeatability ± 0,1.
Belt type: HTD with steel reinforcement, no backlash when changing direction, repeatability: ± 0,1 mm.

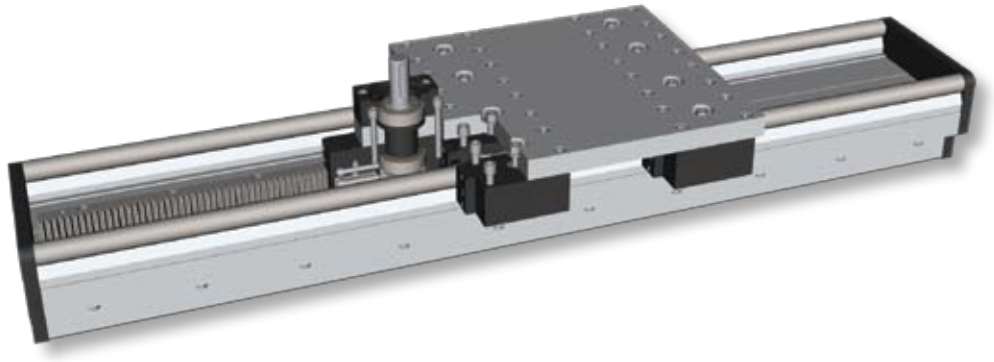
Rack and pinion drive



Function:
This unit consists of an aluminium profile with hardened steel guide rods mounted on top of the profile. The carriage, which has internal linear ball bearings that can be adjusted free of play, is driven along the guide rods by a high precision rack. The rack and pinion system is suitable for highly dynamic servo operation and ideal for lifting movements. The pinion has maintenance-free ball bearings. The rack is lubricated by a toothed felt wheel.

Fitting position: As required. Max. length 6.400 mm without joints.
Carriage mounting: By tapped holes.
Unit mounting: By T-slots and mounting sets. The linear axis can be combined with any T-slot profile.
Carriage support: In the standard version, the carriage runs on 8 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.
Repeatability ± 0,1.
Rack: 8e27 hardened and ground. Repeatability: ± 0,1 mm.

Fraunhofer TESTED DEVICE IPA Lineareinheit QLZ 80 Report No. BA 0005-171

Function:
This unit consists of a square aluminium profile with an integrated roller guide and is covered by a stainless steel sheet (thickness 0.37mm, material 1.4301). The carriage is driven by a timing belt. Belt tension can be readjusted by a simple screw adjustment device in the carriage. This device can also be used for symmetrical adjustment of two or more linear units running parallel. This linear unit is based on the QLZ and is suitable for application in clean rooms of clean-room classification 1000 (corresponding to US Fed. Standard 209 E).

Fitting position: As required. Max. length 3.000 mm without joints.
Carriage mounting: By T-nuts and bores through the cover.
Unit mounting: By T-nuts and bores through the cover.
Belt performance: HTD with kevlar reinforcement, no backlash when changing direction, repeatability ± 0,1 mm.
Carriage support: In the standard version, the carriage runs on 4 rollers which can be adjusted and serviced at a central servicing position. For longer carriages the number of rollers can be increased.

			Pos.	1	2	3	4	5	6	7	

Sample ordering code:
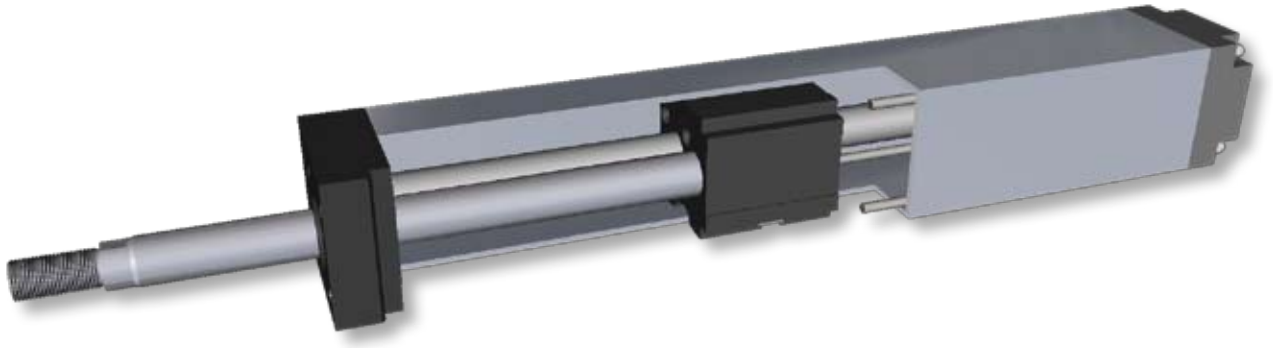
QSKE80, ballscrew right hand thread, full stainless version, standard carriage, one shaft (locating bearing side), spindle 25x5, 1150 mm stroke.

Positioning systems QLZE and QSKE-Lift

RHT/K A positioning system, RHT/K V positioning system piston rod with solid cylinder

Positioning system RHT/K 60A, 80A, 100A, 120A



Function:
Due to the rotating motion of the threaded spindle and the leading nut integrated into the carriage, the piston rod is moved towards the outside in a linear movement. Spindle and piston rod are arranged parallel to each other within an enclosed system. The use of hardened and ground solid material ensures optimum surface quality and a long lifetime of the sealing.

Fitting position: As required. Max. length 1500 mm
Unit mounting: By tapped holes in the bearing blocks, mounting sets.

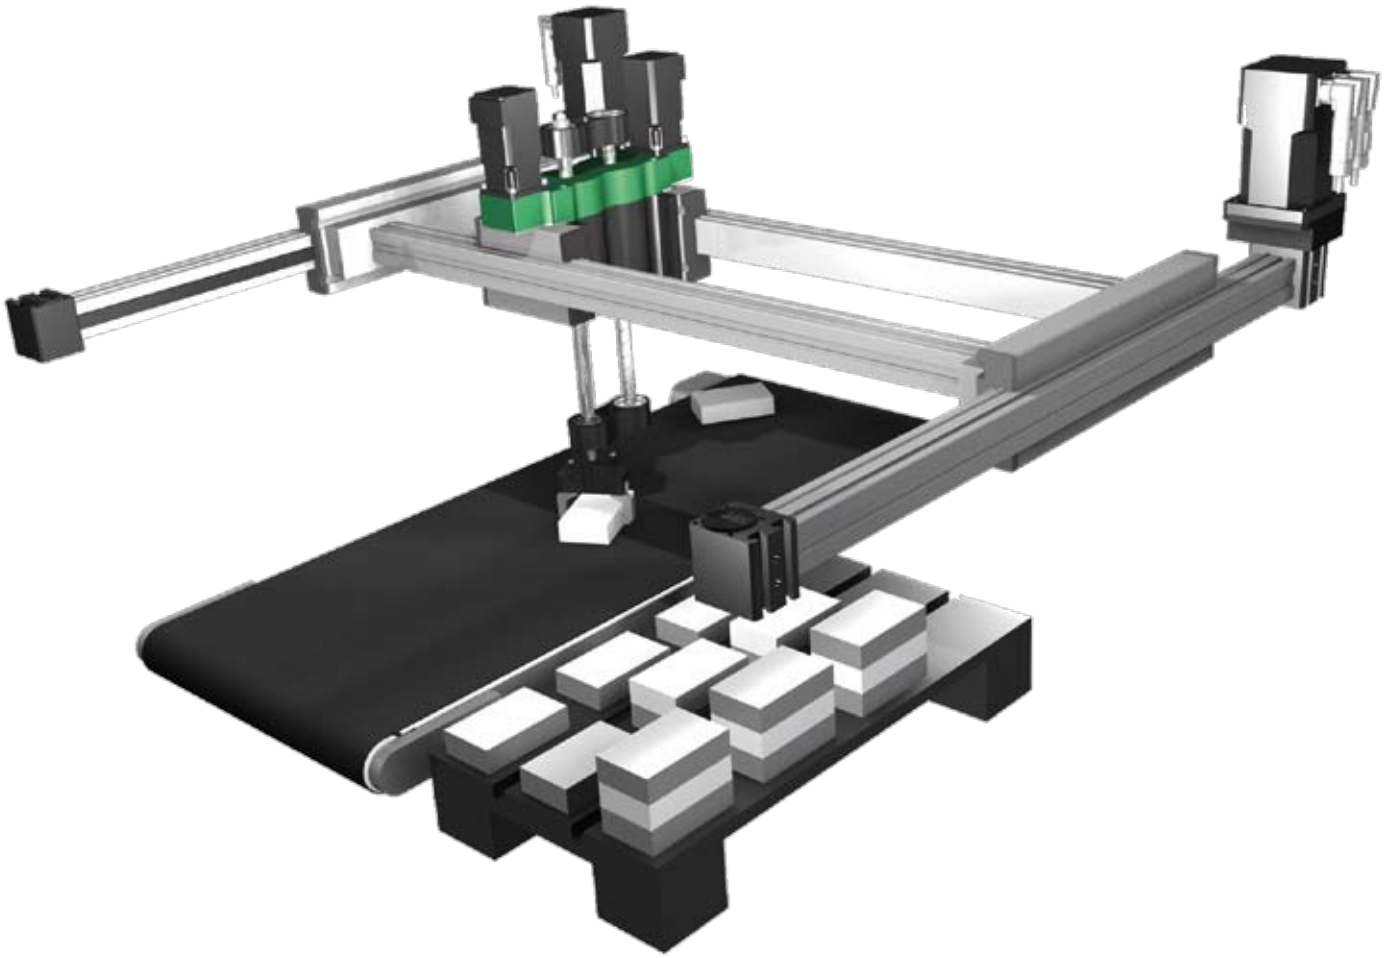
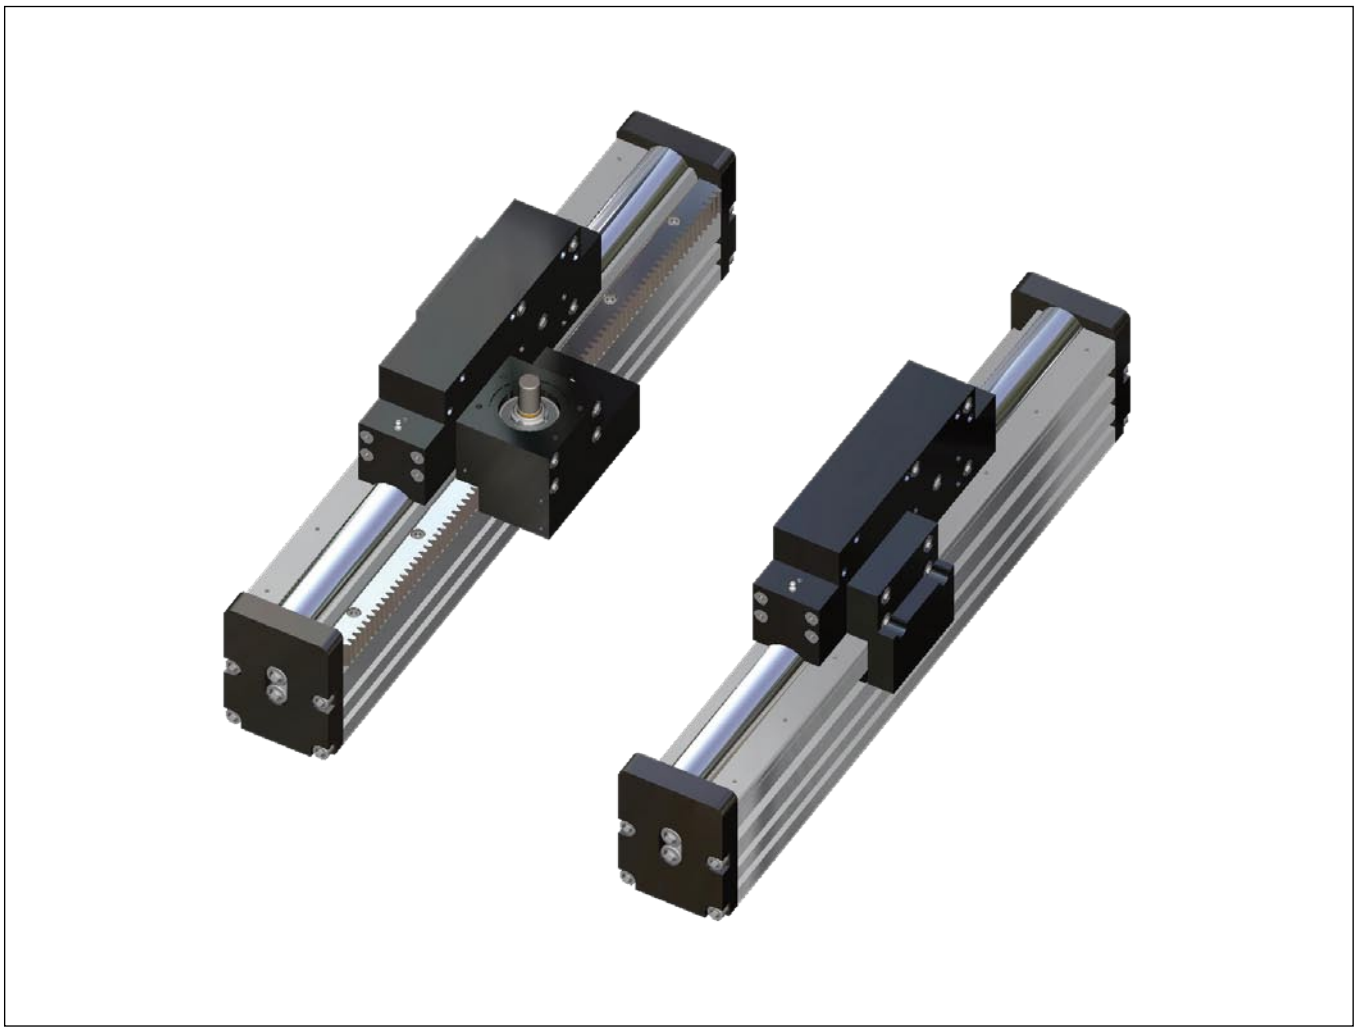
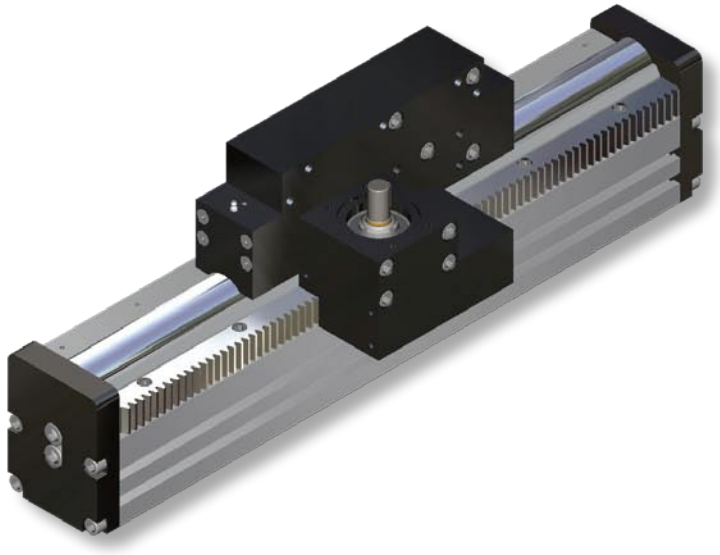
Combination of different systems





SLTZA/SLTR heavy duty traverse with rack and pinion drive and without

Positioning system SLTZA 30, 50



Function:
The guide body consists of an aluminium square profile with a guide rod clamped into it on the upper side free of play. A roller pack containing 2 rollers moves along the guide body. The roller pack is secured against derailing by means of a lateral claw. The system is rack and pinion driven. The number of roller packs is limited due to the length. The system may be extended according to your needs by means of the connecting brackets available as accessories.

Fitting position: horizontal, any max. length
Unit mounting: by T-Nuts and mounting profiles at the side of the profile

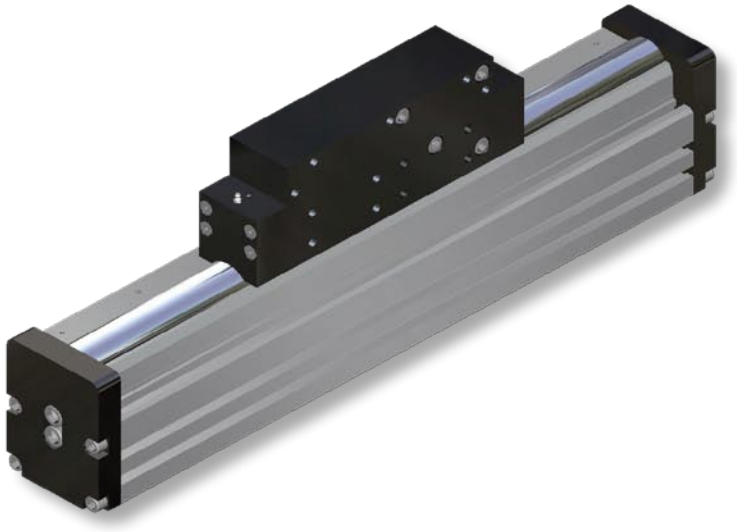
Sample ordering code:
SLTZA 50, 50 mm guide rods, Standard profil, 2 carriages, 2 drives, rack and pinion accuracy 0,091 mm/300 mm, Stroke 500 mm

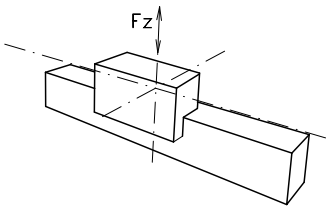
Positioning system SLTR 30, 50



Function:
The guide body consists of an aluminium square profile with a guide rod clamped into it on the upper side free of play. A roller pack containing 2 rollers moves along the guide body. The roller pack is secured against derailing by means of a lateral claw. The system is not driven. The number of roller packs is limited due to the length. The system may be extended according to your needs by means of the connecting brackets available as accessories.

Fitting position: horizontal, any max. length
Unit mounting: by T-Nuts and mounting profiles at the side of the profile

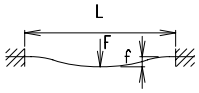
Forces and torques



Size	SLTR 30	SLTR 50
Forces / Torques	static	static
F_z (N)		
All forces and torques relate to the following:		
existing values / table values	$\frac{Fy}{Fy_{dyn}} + \frac{Fz}{Fz_{dyn}} + \frac{Mx}{Mx_{dyn}} + \frac{My}{My_{dyn}} + \frac{Mz}{Mz_{dyn}} \leq 1$	
Geometrical moments of inertia of aluminium profile		
I_x mm^4	2,10 x 10^7	8,70 x 10^7
I_y mm^4	3,00 x 10^7	10,80 x 10^7
Elastic modulus N/mm^2	70000	70000

Formula: SLTR
Deflection:

$$f = \frac{F * L^3}{E * I * 192}$$



f	= deflection	(mm)
F	= load	(N)
L	= free length	(mm)
E	= elastic modulus 70000	(N/mm^2)
I	= second moment of area	(mm^4)

Spare parts

Toothed belt

The maximum length of one belt is 60 m. You can use the maximum power range of belt only from -10 C° to +60 C°. For every increase of temperature of +10 C° you have to reduce capability of belt by 20%. For applications with more than 80 C° the humidity should not be higher than 50%.

Accessories

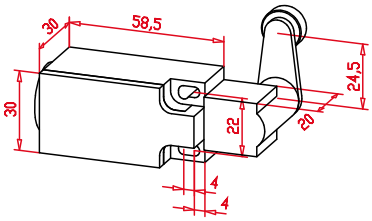
Limit switch

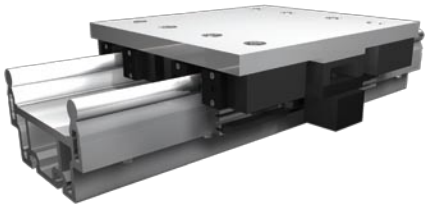


Fully insulated thermoplastic switch with adjustable operation lever. The operation device can be turned by 90°, the lever can be turned to engage by 360°.

Max. voltage	380 V
Max. constant current	6 A
Max. current at make	16 A
Duty classification	max.6000/h
Mechanical lifetime	1 x 10^7
Operating repeatability	± 0,01
Transit time/snap switch	ca. 10 ms
Protection class	IP 65 (DIN 40050)
Working temperature	-30° C to +80° C

Code-No.	choice
01101	standard
01102	M16x1,5 connector
01101ex	Version ATEX

Limit switch



3 electromechanical switches in a row.

Nominal voltage	250 V
Cont. current	6 A
Switch rate	max.300/min.
Mech. Lifetime	>30 Mio.
Repeatability	± 0,01 mm
Transit time/snap switch	ca. 10 ms
Protection class	IP 67 (DIN 60529)
Working temperature	-5° C bis +80° C

Code-No.	choice
01105	switch system *

* consisting of 2 cam ledges and 3 cams

Proximity switch

Inductive proximity switches. Protection class IP67

Code-No.	Type	Switching distance	Voltage	Output	Function

PNP NO (normally open) =

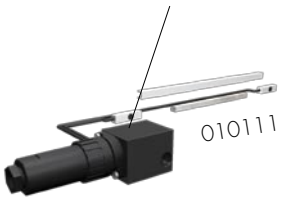
PNP NC (normally closed) =

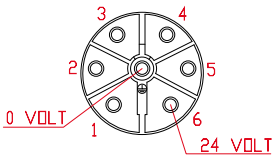
Accessories

Proximity switch DL / DS

Inductive proximity switch, integrated in guide body profile DL/DS.
In standard version, limit switches are designed as break contacts, and reference switches are designed as make contacts

Plug holder





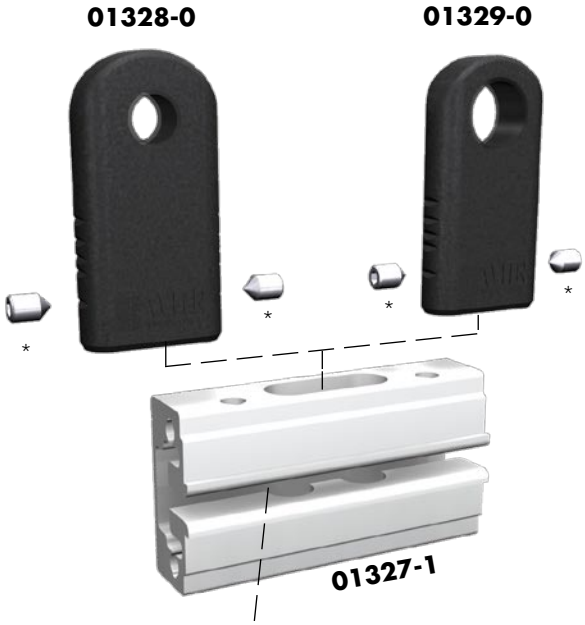
Code-No.	Type
010111	2 integrated inductive proximity switches as limit switch
010122	2 integrated inductive proximity switches as limit switch, 1 reference switch right
010133	2 integrated inductive proximity switches as limit switch, 1 reference switch left
01322	Plug holder right
01323	Plug holder left

Technical data for plug:
Working temperature -40° / +90°
Protection class IP65
inflammability UL-standard 94VO

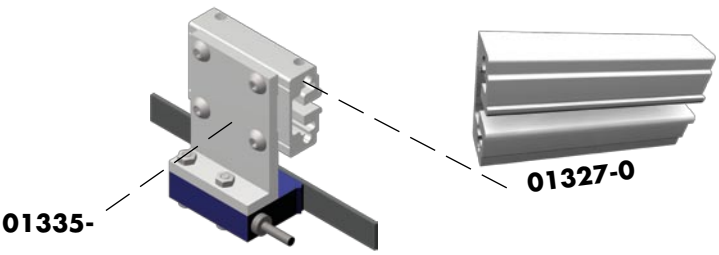
Proximity / limit switch holder DL / DS / QL / QS

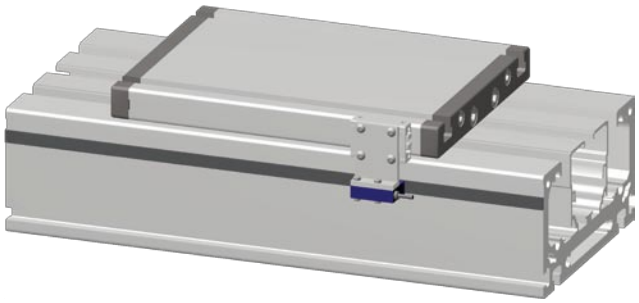
Proximity / limit switch holder for guide body profile DL./DS/QL/QS

Code-Nr.	Type
01327-0	Base holder for a limit switch
01327-1	Base holder for a proximity and a limit switch
01328-0	plug in holder for a proximity switch M8x1
01329-0	plug in holder for a proximity switch M12x1
01330-0	plug in holder for a proximity switch Q 8x8
01335-0	Sensor holder DL/DS 120 / QL/QS 60 H = 46,5mm
01335-1	Sensor holder DL/DS 160 H = 50,5mm
01335-2	Sensor holder QL/QS 80 H = 52,5mm
01335-3	Sensor holder DL/DS 200 H = 48 mm
01335-4	Sensor holder QL/QS 100 H = 57 mm



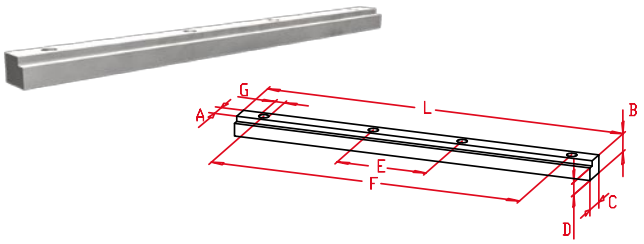
* stainless steel grub screws





Accessories

Activating strip DL / DS



For internal proximity switches.

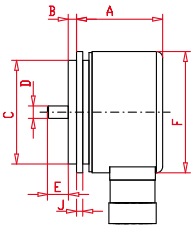
T13011	DL/DS 200					

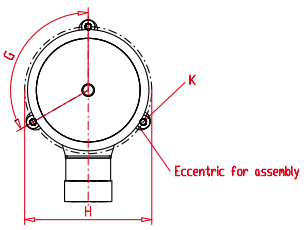
T13060	500

Sample ordering code: Center-distance of axis L = 500 mm

For center-distances higher than 800mm
you have to use an additional tensioning device code-number 04099.

Incremental encoder





With flange and coupling, ready for assembly to any linear unit. 500 increments per revolution. Other resolutions on request.

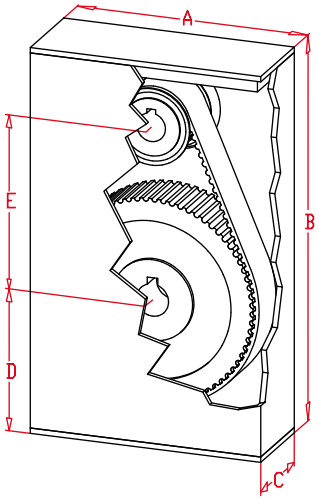
Code-No.	A	B	C	D	E	F	G	H	J	K for
E 05500	57,5	4	50_{h7}	6_{h9}	10	58,5	120°	65	3	M3

Accessories

Toothed belt gear

Rectangular aluminium tubular housing, ends covered with plastic end caps. Toothed pulley fitted to motor shaft with key or tension ring. Housing can be used for adapting nearly any motor.

Dimensions in the table are examples. In general dimensions depend on motor-shaft, flange and ratio.



***depends on motor shaft diameter**

Processor	Intel® Celeron® M ULV, 1-GHz clock frequency
Flash memory	64-MByte-Compact Flash card
Internal main memory	256 MByte DDR-RAM (expandable to 512 MByte, 1 GB)
Interfaces	2 x RJ 45 (internal Switch)
Diagnostic LED	1 x Power, 2 x LAN link/aktivity, 1 x TC, 1 x flash access
Extension slot	1 x Compact-Flash-Typ-I+II-module insert with eject mechanism
Clock	internal battery-backed clock for time and date
Operating System	Microsoft Windows CE.NET or XP Embedded
Control software	TwinCAT PLC Runtime , TwinCAT NC PTP Runtime oder TwinCAT NCI Runtime
System bus	16-Bit-ISA (PC104-Standard)
Power supply	via Systembus (through power supply module CX1100-000x)
Max. power loss	11 W (including the system interfaces CX1000-N0002)
Dimensions (W x H x D)	96 mm x 112 mm x 99 mm
protection class	IP 20

Code-No.: E74000

Stepping motor clamp KL2541

Number of digital outputs	1 Stepper motor, 2 Phases
Number of digital inputs	2 limit position, 4 for an encoder system
Supply Voltage	8 ... 50 V DC
Output current	2 x 3,5 A, 2 x 5 A peak current
Maximum step frequency	> 125000 steps/s
Step pattern	full step, half step,up to 64-fold micro stepping
Resolution per revolution	approx. 5,000 positions in typ. applications
Current controller frequency	approx. 25 kHz
Diagnostics LEDs for	error phase A and B, loss of step/stagnation, power, enable
Power supply	via the K-bus
Electrical isolation	500 Vrms (K-bus/signal voltage)
Curr. consump. for K-bus	typ. 100 mA
Bit width in the process image	Input/Output: 2 x 16 bit- + 1 x 8 bit control/status
Protec. class/installation position	IP 20/variable

Code-No.: E73010

CANopen Master-Connection of field bus CX1500-M510

Fieldbus	CANopen
Transmission rate	10, 20, 50, 100, 125, 250, 500, 800, 1000 kbaud
Bus connection	open-style-connector, 5-pin
Bus nodes	max. 127 slaves
Interface to the CPU	ISA plug and play, 2 kByte DPRAM
Max. power consumption	1,8 W
Features	CANopen – supported PD communication types: event driven, time-controlled, synchronous, polling; emergency message handling, guarding and heartbeat, boot-up according to DS302, Online Bus Load Monitor and Bus Trace, the error management for each user is freely configurable.
Dimensions (W x H x D)	38 mm x 100 mm x 91 mm
Weight approx.	190 g
Operating temperature	0 °C ... +55 °C
Storage temperature	-25 °C ... +85 °C
Protection class	IP 20

Code-No.: E73020

Point-to-point control CX1001-122

Multi-axis drive with contouring control: isiModul2 and isiModul5

isiModul® – the compact solution

isiModul® by isiMotion is the ideal solution for all multi-axis systems. Drives and contouring control are integrated in one compact housing and therefore help you to save cabinet space and mounting time.

isiModul® controls all linear and rotating servo motors. A special advantage is the intelligent commutation of linear motors without moving. This makes it possible to commutate gantry systems or vertical axes without problems.

Features
- Contouring control with real-time OS
- jerk-free contours
- 2 CAN interfaces (can be used as CAN master or CAN slave)
- Profibus interface
- RS485 interface
- Ethernet interface for configuration or connection of smart cameras
- 2 encoder inputs (master/slave)
- Feedback systems: resolver, Hiperface®, EnDat 2.1
- safe restart lock
- UL/CSA
- RFI-emission: domestic environment, noise-immune: industry
- networking of several isiModuls via CAN

Code-No.		E56002-	E56005-
Rated Data	Unit.	**isiModul 2**	**isiModul 5**
Rated voltage (symmetrical to ground), max. 5000 rms symmetrical amplification (L1, L2, L3)	V_{AC}	3 x 115 $V_{-10\,\%}$ – 230 $V^{10\,\%}$ 40 – 65 Hz	3 x 230 $V_{-10\,\%}$ – 480 $V^{10\,\%}$ 45 – 65 Hz
Rated input power for S1-operation at 230 V/400 V	kVA	6	8 (230 V) – 14 (400 – 480 V)
Rated DC-link voltage	V_{DC}	150 – 360	290 – 680
Auxiliary voltage +24 V	V_{DC}	22 – 30	22 – 30
Power supply holding brake +24 V-BR	V_{DC}	25 – 27	25 – 27
Power of auxiliary voltage +24 V	W	24	35
Power of contouring module	W	15	15
Max. current of holding brake per axis	A_{DC}	1	2
Rated output current axis 1 (rms +/-3 %)	A_{eff}	5	10
Rated output current axis 2 (rms +/-3 %)	A_{eff}	5	10
Rated output current axis 3 (rms +/-3 %)	A_{eff}	5	10
Max. total continuous current of all axes (cooling unit)	A_{eff}	15	20
Peak output current axis 1 for max. 5 s (rms +/-3 %)	A_{eff}	10	20
Peak output current axis 2 für max. 5 s (rms +/-3 %)	A_{eff}	10	20
Peak output current axis 3 für max. 5 s (rms +/-3 %)	A_{eff}	10	20
Power stage losses (sum of average currents of the 3 axes multiplied by factor) without ballast losses	W/A_{eff}	5	10
Output frequency of power stages	kHz	8	8
Regen Circuit			
DC-link voltage	µF	940	700
Value of external regen resistor	Ω	33	25
Value of internal regen resistor	Ω	33	25
Rated power of internal regen resistor	W	66	200
Peak power of internal regen resistor for 1 s (max. 1 s/120 s)	kW	5,1	6,5 (bei 230 V) 21 (bei 400 V) 27 (bei 480 V)
Internal Fusing			
Auxiliary voltage 24 V (+24 V at BGND)	-	electronic fusing	
Holding brake supply 24 V_BR (+24 V_BR at BGND)	-	no fusing	electronic fusing
Regen resistor	-	electronic protection	
Mechanical Data			
Height with/without mating connectors	mm	249/249	472/378
Width	mm	160	158
Depth with/without mating connectors	mm	300/225	240/240
Weight	kg	3	9,9
Ambient Conditions			
Ambient temperature during operation	°C/°F	0 to 45°C (32 to 113°F) when observing rated data 45 to 55°C (113 to 131°F) with performance reduction of 2,5 %/K	
Rel. air humidity during operation	%	85 without condesation	
Abs. altitude of mounting	m above sea level	With rated operation up to 1000, 1000 to 2000 with performance reduction of 1,5 %/100 m	
Degree of air pollution	-	Level 2 according to EN 61800-5-1	
Type of protection	-	IP20	
Ventilation	-	forced cooling by internal ventilator	
Version:		**isiModul 2**	**isiModul 5**
One-axis drive (Control + 1 Drive)		**E56002-1**	**E56005-1**
Two-axis drive (Control + 2 Drives)		**E56002-2**	**E56005-2**
Three-axis drive (Control + 3 Drives)		**E56002-3**	**E56005-3**

isiMotion offers a range of cutting edge servo motors with extremely high power density and minimal cogging. These motors were originally developed for tooling machinery and meet all requirements for high dynamics. Together with multi-axis drive isiModul they form an unbeatable system for allmost all application tasks.

All motors of product range ISH are equipped with resolver or multiturn encoder by standard and provide PTC or KTC sensor resp. for temperature control. Feedback and power cables connect with M17 connectors.

Options:
- holding brake
- featherkey acc. to DIN 6885
- protection class IP67 with shaft seal ring
- UL design

Motor ISH2-0070 with Multiturn Encoder, without brake, 560 V_{DC} Version

By using high-energy magnetic material NdFeB (size 4x: SmCo) it is possible to design small diameter disc motors. For this reason and due to a carefully optimized technical construction of the rotor, the motors have a low moment of inertia.

The stability of the magnetic material and the design of the magnetic field in the face of demagnetisation allow maximum currents of up to 4 times the rated current.
This results in a high acceleration capacity of the low-inertia three-phase AC servo drives.
Through the excitation of the permanent magnets, no Joule's heat losses occur in the rotor.
With three-phase AC-servomotors, Joule's heat losses occur only in the stator, which can then be directly drawn off via the housing.
These favourable cooling conditions allow high-capacity windings.
Since all the Joule's heat losses are drawn off directly via the housing, the motors are designed at low cost with the enclosure type providing protection in accordance with IP 54 (optional: IP 65; size 4x: IP65 standard) and they are thus very resistant to liquids and dirt.

Motor CFM71S, 1,00 Nm for 400 V AC, without brake, Motor turns 3.000 U/Min.

Servomotors of the CPM Series complete the range of servomotors of SEW-EURODRIVE in the lower torque range: 0.5 Nm to 7.1 Nm are available in three CMP motor sizes.CMP servomotors offer a bearing servicelife up to 25,000 hoursand an appropriately high overhung load capacity that can make them to workhorses when they are operated at rated speed of 3,000 up to 6,000 min^{-1}. Theier innovative design with the latest in winding and magnet technology offers a motor system with high dynamics, low operating noise and the best control characteristics at the smallest space. The cast statorprotects the motoragainst vibrations and humidity.

MOVIDRIVE® MDX61B is the new generation of drive inverters from SEW.
The new MOVIDRIVE® drive inverters of the B series convince with more basic functions, extended lower speed range, increased overload capacity and modular unit design.

As a result, AC drives with the latest digital inverter technology can now be used without restrictions in the power range from 0.55 to 132 kW .
The integrated control functions and the possibility of expanding the system with technology and communication options is leading to drive systems that are designed for particularly high levels of efficiency in terms of their broad range of applications, project planning, startup and operation.

The Userpanel on the picture above is a option for the servo drive inverters, it belongs not standardly to the product!

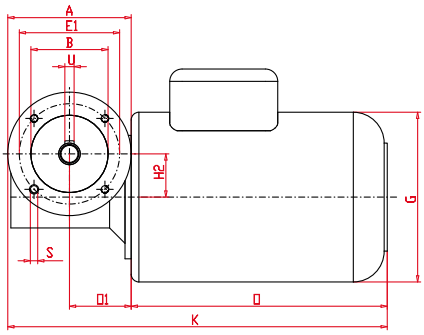
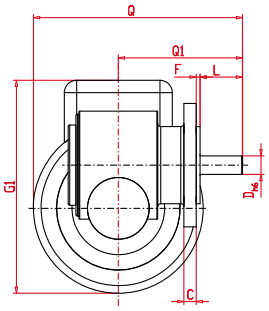
*) Additional functions to standard (pre-parametized)
1) The rated mains currents and output currents must be 20% below the rated data at V_{mains} = 3 x AC 500 V
2) The performance data apply to f_{PWM} = 4 kHz (factory setting in VFC operating modes)

Accessories

AC worm gear motor





Protection class IP 54, 220/380 V, 50 Hz, from 90 to1100 W.
Available with electronic disc brake.
Speed 1400 rpm or 2800 rpm.
Reduction gearing options: 5:1, 7:1, 15:1, or 20:1.
Further options on request.

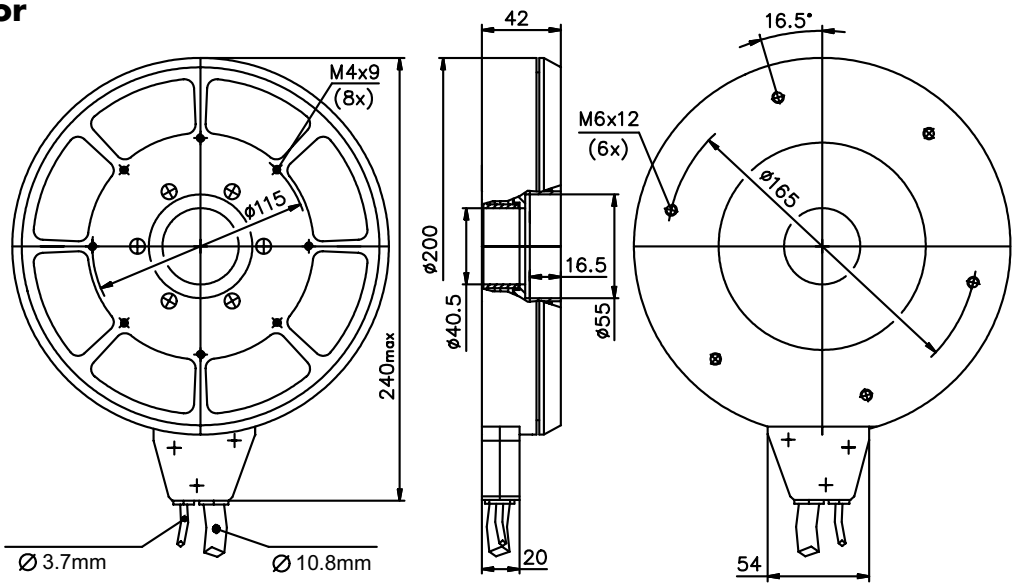
Servomotor and controller

Rotary synchronous motor RSMR-T-24-145x25



Code-No.	Type
E52500	RSMR-T-24-145x25-GS
E52501	RSMR-T-24-145x25-GT

FEATURES:

- Iron-core three-phase rotary synchronous motor with rare-earth magnets for high force density.
- Direct drive (no gear, no backlash), low profile (height 42 mm) with hollow shaft (Ø40 mm).
- Built-in precision ball bearing, sine optical encoder, thermistors for overheating protection.
- High precision, repeatability and resolution, low cogging, smooth movement.
- High motor stiffness and large bandwidth by position regulator with encoder feedback.

APPLICATIONS:

Semiconductor manufacturing, pick and place machines, indexing tables.

CONSTRUCTION:

Motor consist of a fixed lamination stack with windings (stator) and rotated steel ring with glued permanent magnets (rotor). Windings are encapsulated in thermally conductive epoxy. The smoothness of movement is achieved by sinusoidal commutation of motor phases currents.

SPECIFICATION OF RSMR-T-24-145x25-		GS	GT

Accessories

Electronic display MA502

This display serves to interpret information from the incremental MS500 magnetic sensor for distance and angle measurement. The display parameters are comprehensive and individually programmable. Optionally equipped with serial interface and integrated power unit.

Features:
- High-contrast LCD, dot matrix
- Integrated translation module for length and angle
- Measurement
- Incremental/reset function
- Input for reference switch
- Programmable last value memory
- Direct input of reference/offset value

Magnetic sensor MS500

The information of the magnetic strip is sensed contactlessly. A connection cable permanently attached to the sensor transmits the information to the translation module or magnetic display.

Features:
- Small, compact design of sensor and connector
- Robust housing
- Insensitive to dust, shavings, humidity
- Magnetic strip MB500

	Electronic display MA502	**Magnetic sensor MS500**
Power supply	24 V DC ± 20%; 230 V AC; 115 V AC	Mini-DIN 7-pole
Display range	12-digit LCD Dotmatrix	-
Output signal	-	-

Code-No.	**E 77070**	**E 77076**

Magnetic strip MB500

The magnetic tape consists of a strip polarised at defined intervals, which is firmly connected with a carrier tape. In addition, a magnetically conducting cover strip made of stainless steel is included in the scope of delivery.
· Simple mounting by a double-sided Scotch tape
· High resistance against external influences

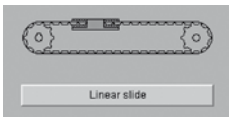
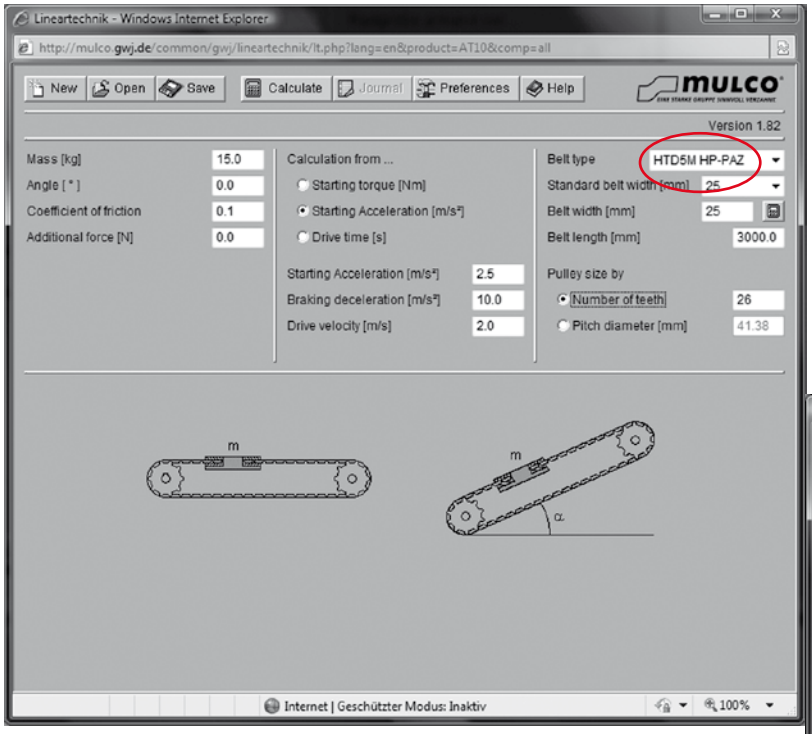
Specifications
Service manuals

Specifications

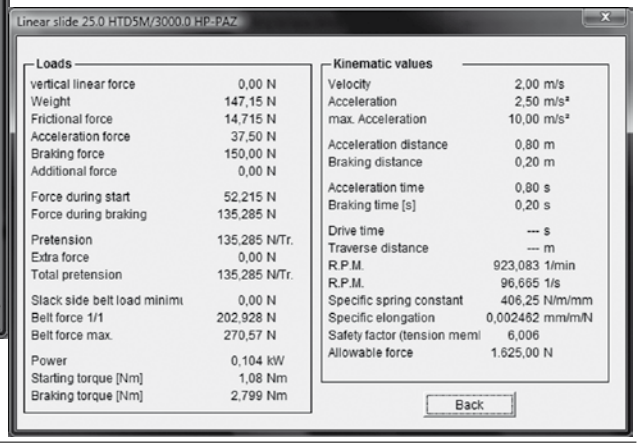
Calculation of max. acceleration (horizontal)



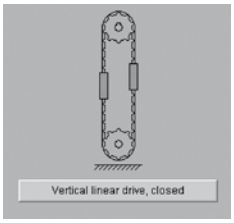


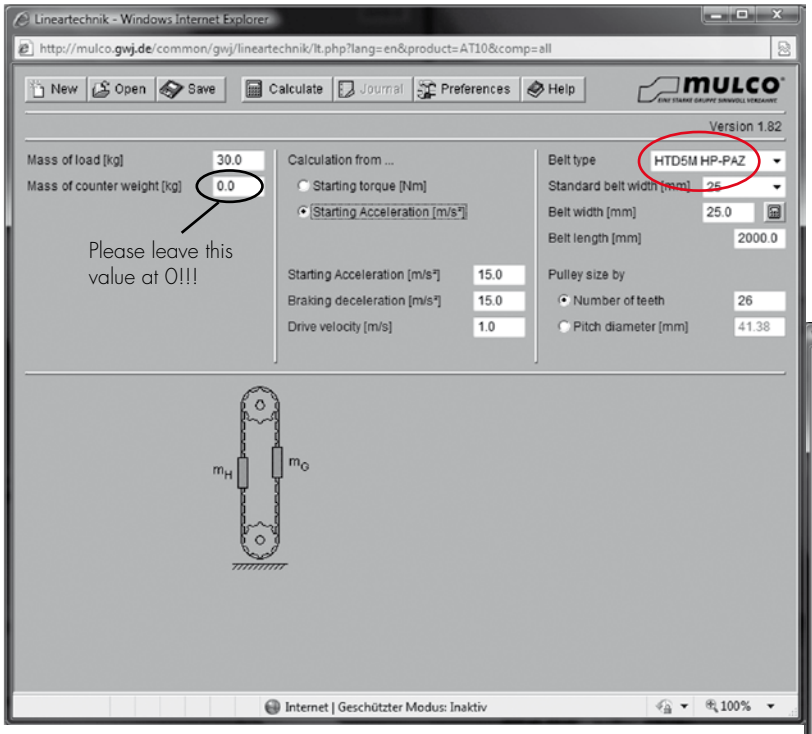
To calculate your horizontal load and kinematic data, please use the timing belt calculation of Mulco. You can find these at:
http://mulco.gwj.de/en/index.htm
After a free registration you get to the shown on the left side.
When selecting the type of belt, please ensure that you have chosen a HTD belt xx HP-PAZ (see left ellipse).

After entering your parameters can be obtained from a click on „calculate" the result window (see below) with your values.



Calculation of max. acceleration (vertical)





To calculate your vertical load and kinematic data, please use the timing belt calculation of Mulco.

The course of the calculation is the same as described above.
On the selection page where you can choose the type of load, select the option „Vertical linear drive, closed".
The difference is that this is taken into account the acceleration due to gravity of 9.81 m/s².

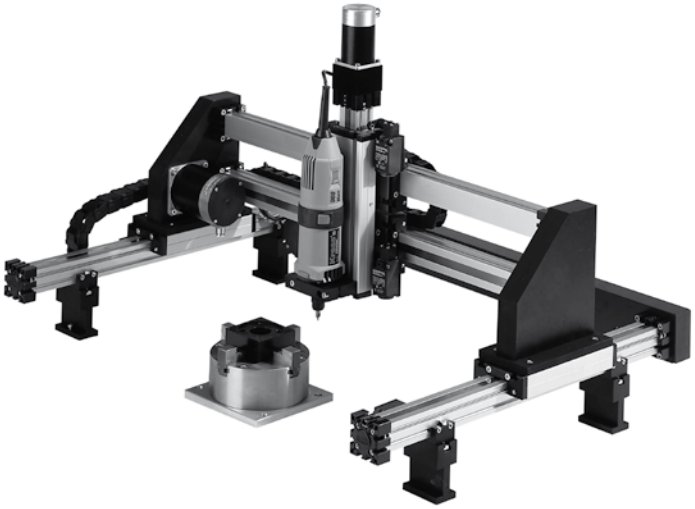
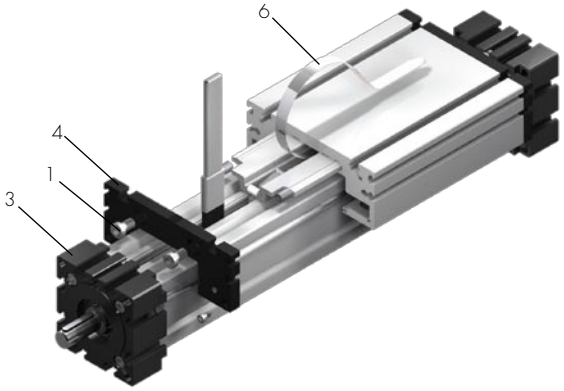
Applications in use



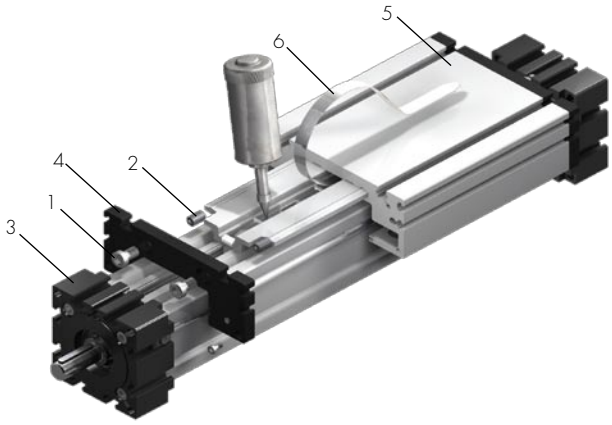
Service manual for EL units

Trapezoidal spindle, sizes EG / EL 30, 40



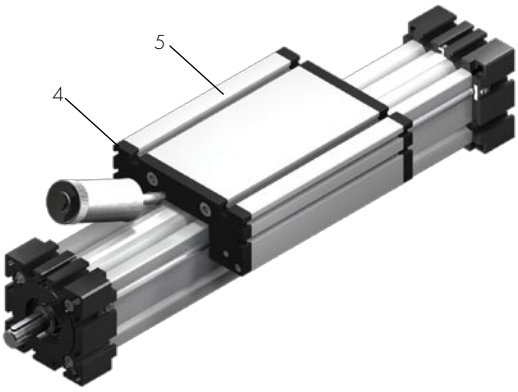
- Drive the carriage to one side
- Unscrew the cylindric screws (1) and push the wiper end plate (4) to the side.
- To reach spindle, unscrew set screw (3)
- Lift the coverband (6)
- Now grease spindle with a slim brush.

Ballscrew spindle, sizes EG / EL 30, 40



- Unscrew the cylindric screws (1) and push the wiper end plate (4) to the side.
- Unbend screws (2), push slide (5) to other side
- Unscrew the grub screws (3) and lift the coverband (6).
- Grease can be filled now with grease gun. For mass of greasing look at table below.

Spindle, sizes EG 60, 80 / EL 60, 80, 100, 125

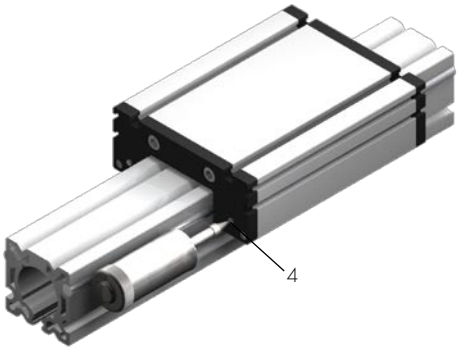


Look at wiper end plate (4) of carriage (5) for greaser nipple.
The ballscrew nut can be filled with grease gun.
For mass of greasing look at table below.

Spindle greasing every 500-1000 working hours.

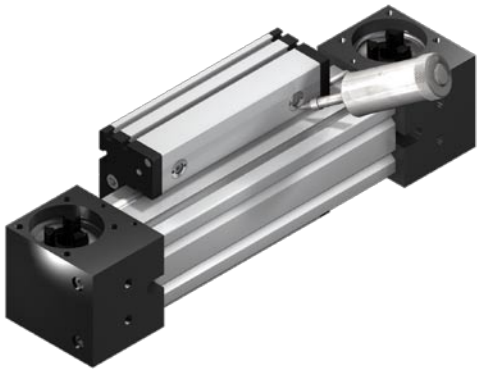
Type	Gewinde/Pitch	Nachfettung/Regreasing	Type	Gewinde/Pitch	Nachfettung/Regreasing
30	Kg 08 x 2,5	0,01 g	**660**	Kg 20 x 05	3,00 g
40	Kg 16 x 05	1,33 g	**80**	Kg 25 x 25	3,00 g
40	Kg 16 x 10	0,84 g	**80/100**	Kg 32 x 05	3,00 g
60	Kg 25 x 05	2,00 g	**80/100**	Kg 32 x 10	4,00 g
60	Kg 25 x 10	3,00 g	**100**	Kg 32 x 32	4,00 g
60	Kg 20 x 20	3,00 g	**125**	Kg 40 x 10	4,00 g

Guiding rods EL



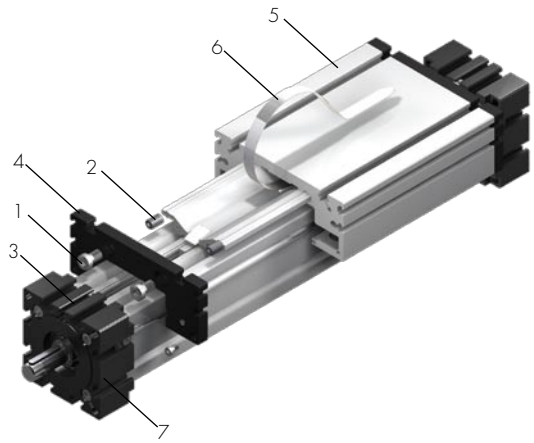
Rods will be greased by the strippers of carriage. There are 2 oil nipples in each wiper end plate (4), where the tanks for the strippers can be filled with an oil gun. Viscosity of oil: 200 mm²/s, T= 40° C. Interval of greasing depends on environmental conditions, min. once a month. Minimum stroke must be same than length of slide.

Rollers size EL 100, 125



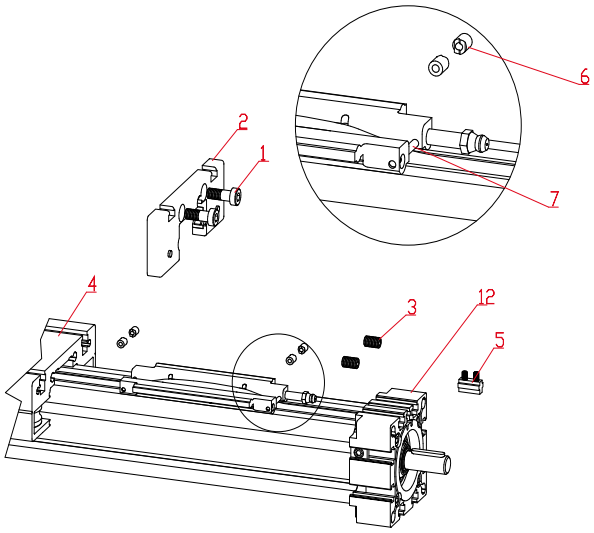
Rollers should be greased each 1.000 working hours or each 6 months with a grease gun. For greaser nipple look at the eccentric at carriage bottom. Use roller grease.
Unit sizes 30 - 80S have got lifetime greased rollers.

Changing cover band EL 100, 125



- Unscrew cylindric screws (1), push plastic wiper endplate (4) to one bearing-block (7),
- Unbend grub screws (2), push carriage (5) to other side
- Unscrew screws (3) and pull out the coverband (6), size 100/125 units have an additional cover-band leader (9),which is the guide for the cover-band.
- Mount the new coverband, fix the screws (3) at one side, tense the band with a pointed pliers and fix the screws (3),
- Fix the carriage by the grub screws (2) and mount the wiper end plate (4).

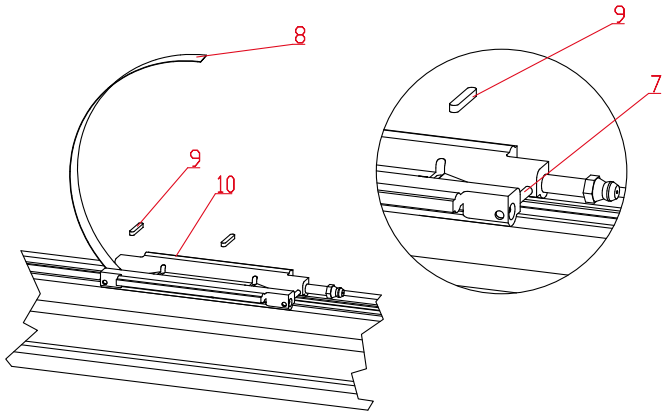
Changing cover-band and plastic guide roller against new slider system ELT / ELK 60, 80



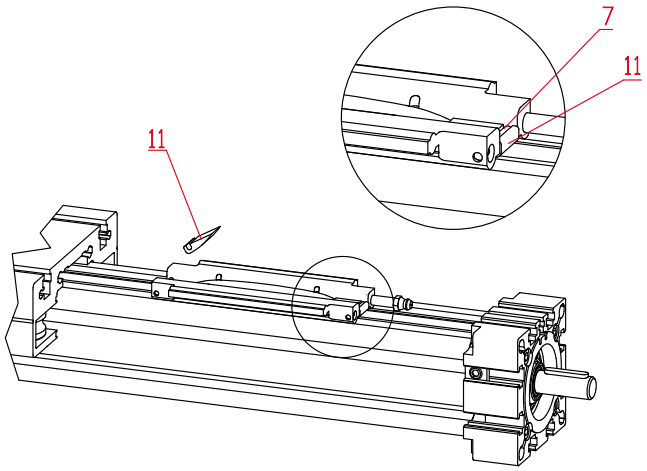
- Unscrew cylindric screws (1) and dismount cover cap (2) on one side of the carriage (4).
- Unscrew grub screws (3) on one side of the carriage (4).
- Destroy the plastic guide roller (6) with a cutting nipper.
- Be careful, don't destroy the hardened straight pin (7)

!!!Attention!!!! Plastic guide roller can crack!!!!

- Be sure that no fragments fall into the guiding-profile.

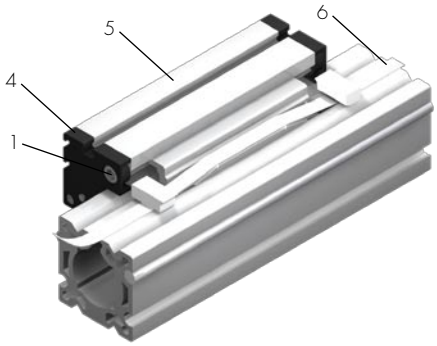


- Pull out cover-band (8) out of the leading-nut receiver (10).
- Dismount the plastic keys (9).
- Mount and push in the cover-band (8) again like before (under the hardened straight pins (7).



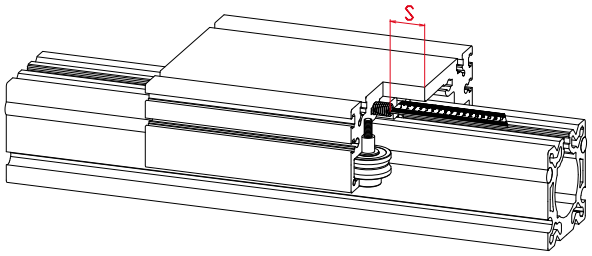
- Hook the plastic slider (11) under the straight pin (7) with the flat side to the middle of the carriage.
- Fix the cover-band (8) on one side with the grub screw clamping (5) at the bearing block (12).
- Tension the cover-band (8) from the opposite side of the unit and fix it with the grub screw clamping, too.

Changing cover band size EL / EG 30, 40



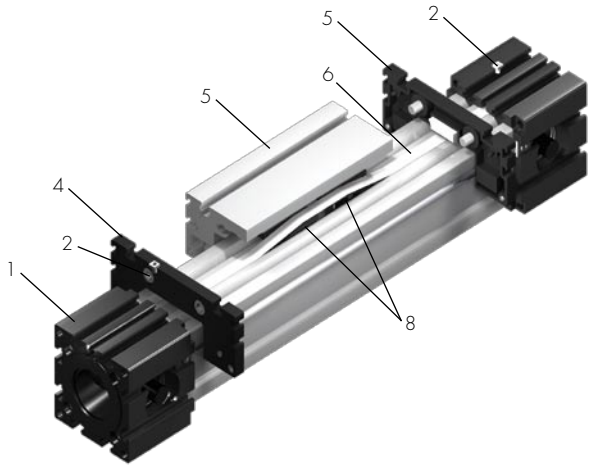
- Unscrew cylindric screws (1), push plastic wiper endplate (4) to the side,
- Unscrew screws (3) and pull out the coverband (6),
- Mount the new coverband, fix the screws (3) at one side, tense the band with a pointed pliers and fix the screws (3),
- Mount the wiper end plate (4).

Changing cover band ELVZ / ELHZ 100, 125



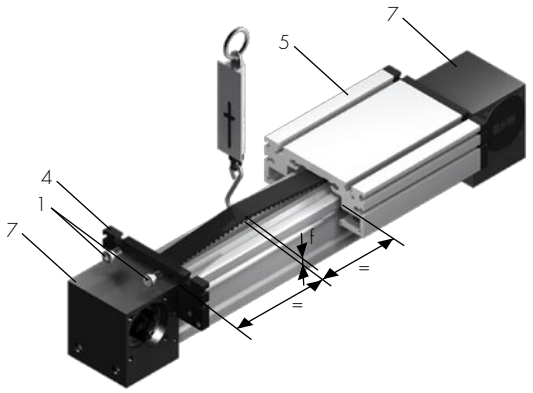
Same mounting as ELT/ELK. Important: Measure the distance "s" between the corner of carriage and the head of the grub screw for belt-tension!

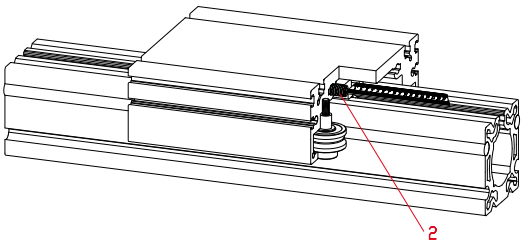
Changing cover band ELHZ / ELVZ 60, 80



- Unscrew cylindric screws (1) on both sides of carriage (5)
- Push the wiper end plates (4) to the side,
- Unscrew the grub screwes (2) and pull out the old coverband (6),
- Push the new coverband under both sliding block (8) in the carriage (5) and wiper end plates (4) into the bearing block (1)
- Fix the grub screw (3) on one side,
- Tense the coverband with a pointed pliers and fix the screws (3) on the opposite side.

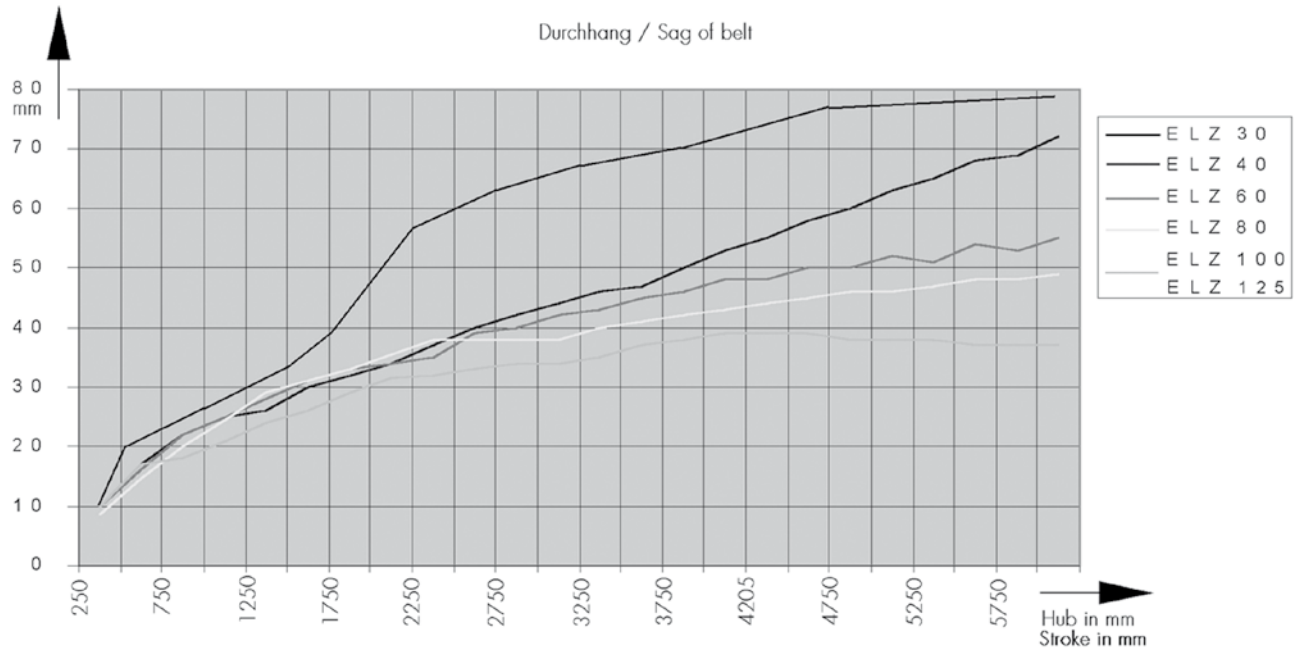
Belt tension ELZ



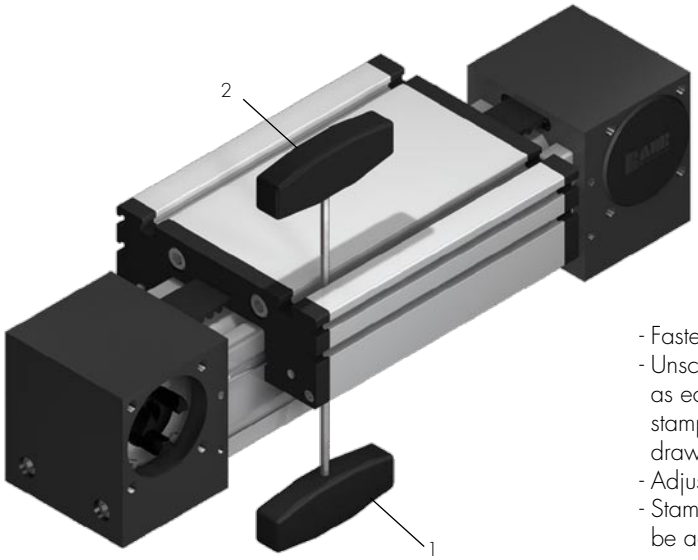


- Push the carriage (5) close to one bearing-block (7).
- Unscrew grub screws (2) of the wiper endplate (4) and push it to the other bearing-block (7).
- Pull the spring balance with force of table and measure the sag (f) of the belt. Compare the measured value with the table.
- Tense or release the belt by the grub screws (2).
- Both grub screws (2) must have the same distance between the corner of the carriage (5) and the head of the grub screw (2).
- The grub screws (2) have to be secured by bonding.
- Measure the distance (s) with a metal rule.
- Mount the wiper endplate (4).

Baugröße / Size	Kraft / Force
30	20 N
40	20 N
60	30 N
80	50 N
100	50 N
125	50 N

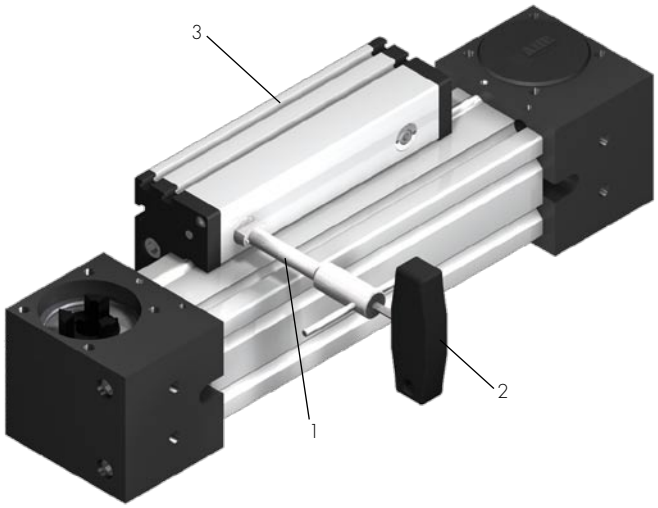


Adjusting the rollers, sizes EL 40, 60

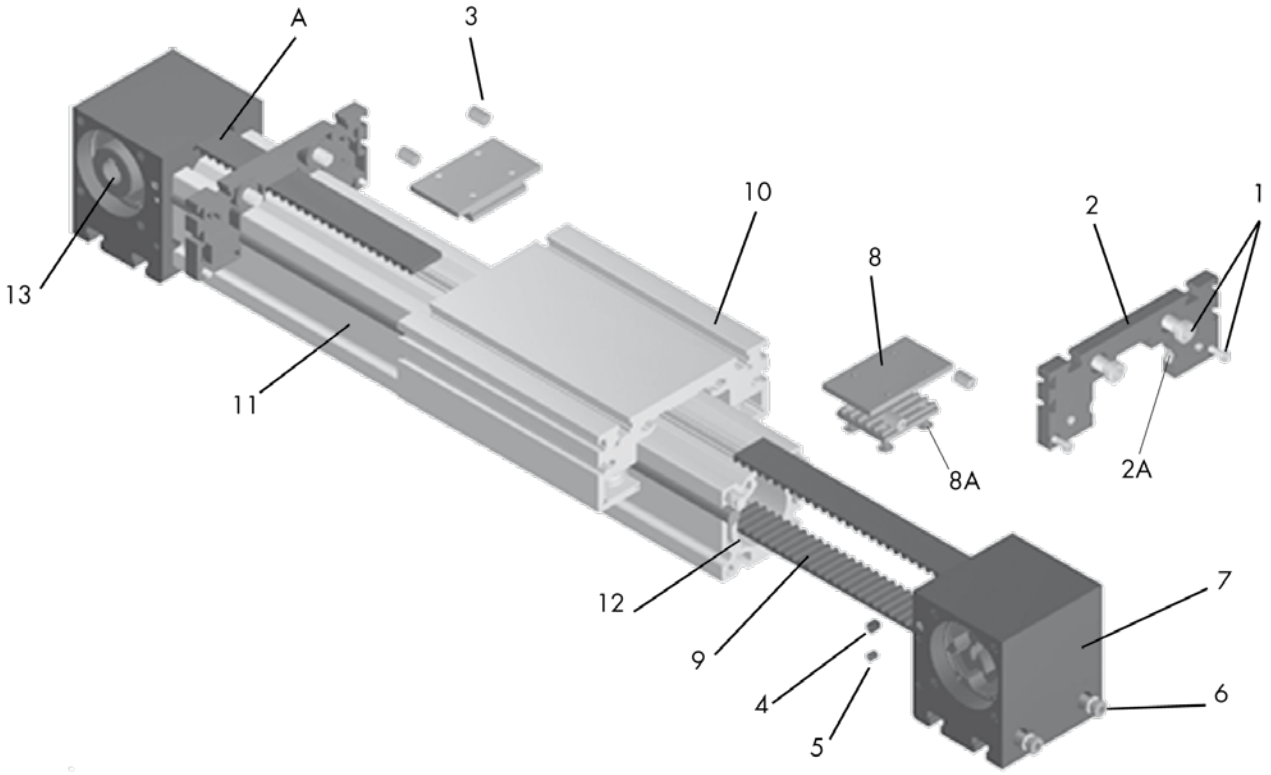


- Fasten eccentric bolt with screw key (1)
- Unscrew screw with hexagon socket screw key (2) as far as eccentric bolt can be turned, upper surface is stamped, broken line of stamp (3) must coincide with drawing groove of slide
- Adjust at other side without initial tension
- Stamps must be in same position and eccentric bolt must be adjusted into right direction.

Adjusting the rollers, sizes EL 30, 80, 100, 125



Belt exchange ELZ



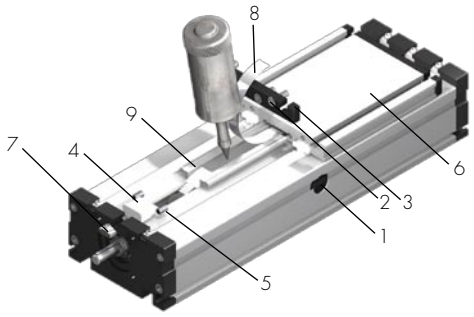
- Unscrew cylindric screws (1) and dismount wiper end plates (2) on both sides of the carriage
(take care, that the felt wipers (2A) don`t drop out !)
- the belt adjusters are fixed by grub screws (3) in the carriage (10); to reach the right belt tension measure the distance between the edge of the carriage and the head of the grub screws
(Notice: the distance must be the same on both sides in axial direction)
- unsrew the grub screws (3) and dismount the belt adjusters (8-8A)
- unscrew the grub screws (4+5) and the cylindric screws (6) and separate the bearing-block (7) from the unit
- pull out the toothed belt (9) in most cases it is not necessary to separate both bearing blocks for inserting the new belt

The reconstruction of the unit takes place in opposite order

- shorten the new belt to the length of the old one
- insert the toothed belt with the toothed side to the profile (11) into the not dismounted pulley block (A) ; rotate the toothed pulley (13)until the toothed belt (9) appears at the end of the profile (12) and pull the belt through the dismounted pulley block (7)
- mount the pulley block (7) on the profile (12) and tighten the grub screws (4+5) and the cylindric screws (6)
- mount the belt adjusters (8-8A) on the ends of the toothed belt and *secure the countersunk screws by bonding !!!*
- insert the belt adjusters into the carriage (10) and *secure the grub screws (3) by bonding !!!*
- tension the belt as per description above and finally mount the wiper end plates (2) on the carriage
(Notice: the easiest way for mounting the wiper end plates is to secure the wipers with a rubberband while mounting)

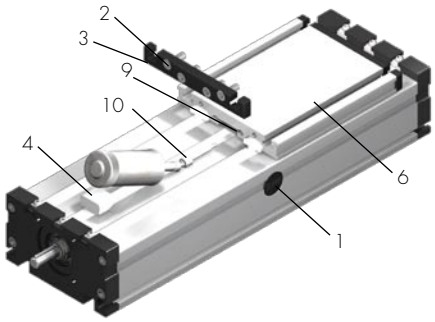
Service manual for D and Q units

Leading-nut, size DLK/DLT / DSK/DST 120, 200



- Drive the carriage to the service position (1).
- Remove the fillister head screws (2) and dismount cover cap (3).
- Remove the middle slider (4).
- Insert the regreasing adapter (10) into the lubrication hole of the leading-nut receptacle (9).
- Regrease now with grease gun. For the quantity of grease see table below.

Leading-nut, size DLT/DLK / DST/DSK 160

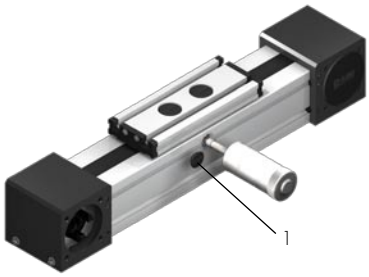


- Drive the carriage to the service position (1).
- Remove the fillister head screws (2) and dismount cover cap (3).
- Remove the middle slider (4) and unscrew set screws (5).
- Push carriage (6) to the side.
- Release the set screw (7) and remove it using the sliding nut.
- Pull out and lift the cover band (8), now the lubrication hole is visible in the leading-nut receptacle (9).
- Regrease with grease gun. For the quantity of grease see table below.

Spindle greasing every 500 - 1000 working hours.

Type	Gewinde/ Pitch	Nachfettung/ Regreasing	Type	Gewinde/ Pitch	Nachfettung/ Regreasing
120	KG 16 x 05	1,33 g	**120/160**	KG 25 x 25	3,00 g
120	KG 16 x 10	0,84 g	**200**	KG 32 x 05	3,00 g
120	KG 16 x 16	1,00 g	**200**	KG 32 x 10	4,00 g
120/160	KG 20 x 20	3,00 g	**200**	KG 32 x 20	4,00 g
120/160	KG 25 x 05	2,00 g	**200**	KG 32 x 32	4,00 g
120/160	KG 25 x 10	3,00 g			

Leading-nut QS 60, 80, 100



Leading-nut QS 60, 80, 100 have to be regreased with high quality bearing grease.

- Dismount cover cap (1)
- Drive the carriage through the service position until you can see the first greasing nipple (2) in the grease hole.
- Re-grease felt now with an grease gun.
- Move the carriage to the second greasing nipple and re-grease here as well.

We recommended bearing grease based on DIN 51825. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per 1.000 km.

Type	Gewinde/ Pitch	Nachfettung/ Regreasing	Type	Gewinde/ Pitch	Nachfettung/ Regreasing
60	KG 16 x 05	1,33 g	**100**	KG 32 x 05	3,00 g
60	KG 16 x 10	0,84 g	**100**	KG 32 x 10	4,00 g
60	KG 16 x 16	1,00 g	**100**	KG 32 x 32	4,00 g

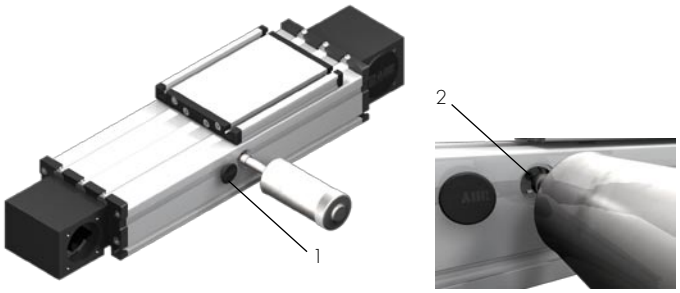
80	KG 25 x 05	2,00 g			
80	KG 25 x 10	3,00 g			

Guiding rods DL 120, 160, 200 / QL 60, 80, 100

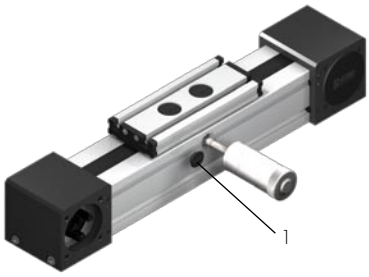


Lubrication is effected by an oiled felt insert. The felt can be re-oiled through lubrication nipples attached laterally to the ends of the roller packs.

- Dismount cover cap (1)
- Drive the carriage through the service position until you can see the first lubricating nipple (2) in the lubrication hole.
- Re-oiled felt now with an oil gun.
- Move the carriage to the second lubricating nipple and re-oiled here as well.

Oils with a viscosity of approx. 200 mm²/s at T=40°C are recommended. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per month. To ensure a sufficient lubrication, the minimum stroke must equal the carriage length, so that sufficient greasing is achieved also in the final positions.

Runner blocks DS 120, 160, 200 / QS 60, 80, 100



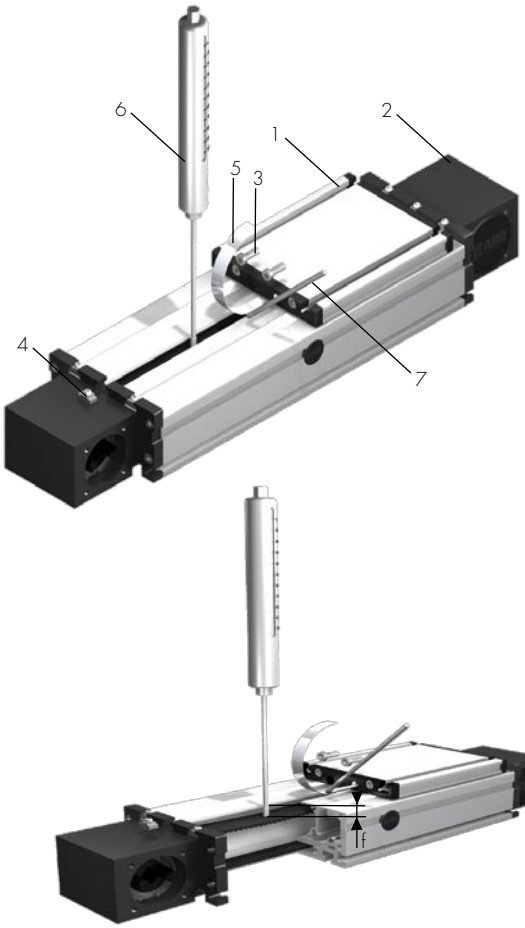
Runner blocks DS 120, 160, 200; QS 60, 80, 100 have to be regreased with high quality bearing grease.

- Dismount cover cap (1)
- Drive the carriage through the service position until you can see the first greasing nipple (2) in the lubrication hole.
- Re-greasing with grease gun.
- Move the carriage to the second greasing nipple and re-grease here as well.

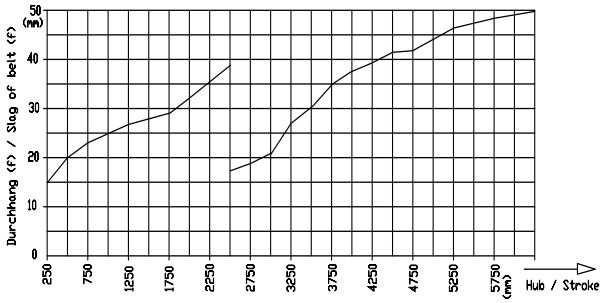
We recommended bearing grease based on DIN 51825. The required regreasing intervals depend on environmental conditions, the standard recommendation is once per 1.000 km.

5.2

Belt tension adjustment DLZ / DSZ 120, 160, 200

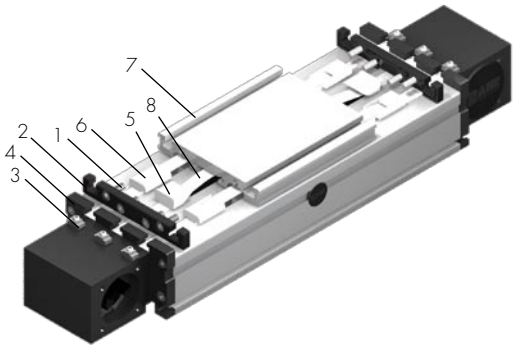


- Push the carriage (1) close to one bearing block (2).
- Remove fillister head screws (3).
- Unscrew set screws (4) for middle cover band (5) at the opposite bearing block.
- Pull cover band out of bearing block and turn it to the side.
- Use springe balance (6) to exert the applicable amount of force (see table) on the center of the belt and measure the sag (f).
- Compare the measured value with the diagram below, and tense or release belt as required by tightening or unscrewing the set screws (7).
- The set screws (7) must be bonded in place with screw locking device.
- Both screws (7) must be screwed in to exactly the same level. Check with sliding caliper.



Baugröße / Size	Hub / Stroke (mm)	Kraft / Force (N)
120	< 2500 2500 - 6000	20 10
160	< 2500 2500 - 6000	20 10
200	< 2500 2500 - 6000	40 20

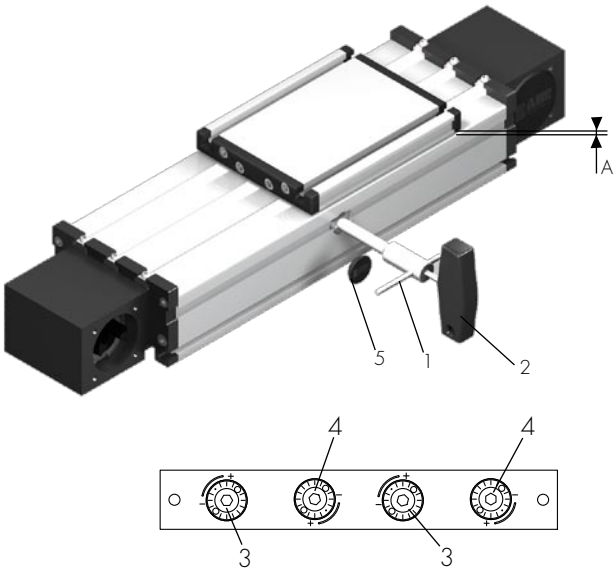
Changing cover band DLZ / DSZ 120, 160, 200



- Drive the carriage to servicing position
- Remove fillister head screws (1) and wiper end plate (2)
- Size 160 and 200: Unscrew set screws (3) at both bearing-block plates (4) and pull the cover band out of the bearing block
- Size 120: Unscrew set screws and remove them with T-nut
- Remove sliders (5) and (6) from both sides of the carriage (7)
- Pull the cover bands (8) out of the carriage
- Insert the new cover bands into the carriage (7)
- Thread the lateral sliders (6) onto the cover band and insert it into the carriage with middle slider (5)
- Size 160 and 200: Tighten cover bands on one side of the bearing block with set screws (3), tense cover band (8) at the other bearing block using pliers and tighten with set screws (3)
- Size 120: Insert T-nut together with set screw into the bearing block and tighten cover band with set screw.

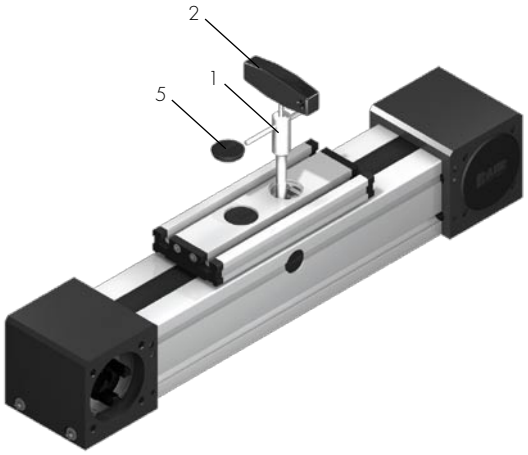
5.2

Adjusting the rollers size DL 120, 160, 200



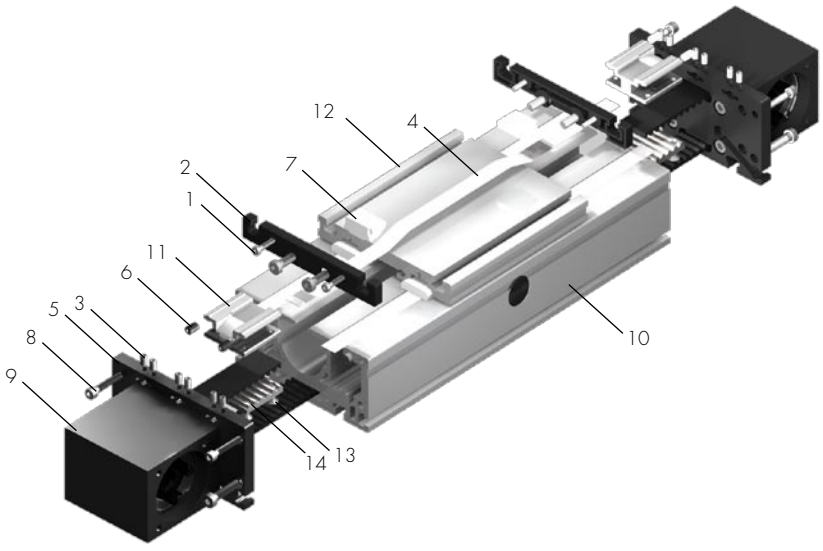
- Dismount cover cap (5) from servicing hole
- Fasten eccentric bolt with screw key (1)
- Release screws with hexagon socket screw key (2) until the eccentric bolt can be turned.
- Adjust the gap dimension (A) between carriage and guide body profile by turning the eccentric bolts (3). Turning towards + will increase the gap dimension.
  (DL120 approx. 1.8 mm, DL160 approx. 2.8 mm, DL200 approx. 3.0 mm).
- Turn the eccentric bolts (4) to adjust the carriage free of play by the touch (without initial tension)
- Ensure that the eccentric bolts are adjusted to the right.

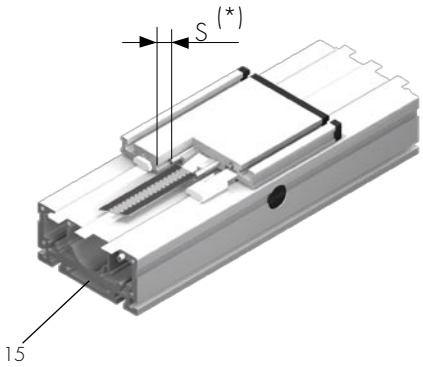
Adjusting the rollers size QL 60, 80, 100



- Dismount cover cap (5) from servicing hole
- Fasten eccentric bolt with screw key (1)
- Release screws with hexagon socket screw key (2) until the eccentric bolt can be turned.
- Turn the eccentric bolts to adjust the carriage free of play (without initial tension)
- Ensure that the eccentric bolts are adjusted to the right.

Belt exchange DL / DS





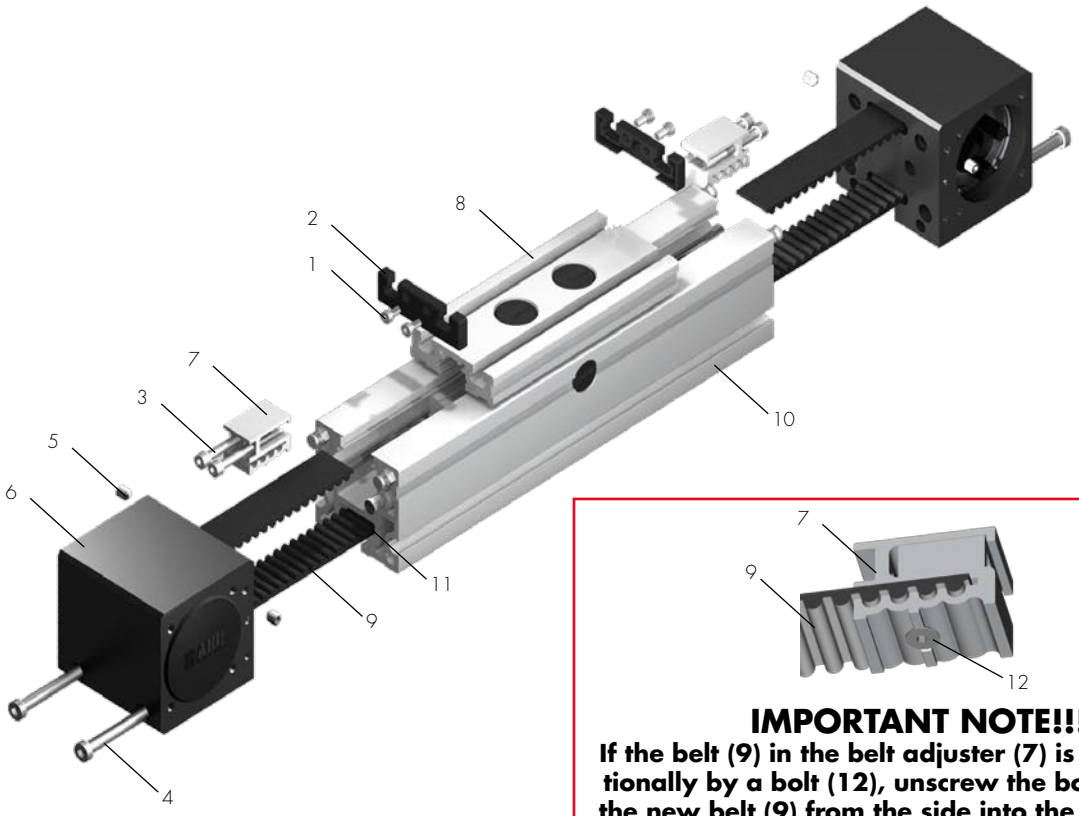
Changing belt of DL / DS 120, 160, 200

- Unscrew cylindric screws (1) and dismount cover caps (2) on both sides of the carriage.
- Unscrew grub screws (3) on both sides of the unit and pull out the only the middle cover band (4) of the bearing-block plate (5).
- Measure the reach of grub screws „S" (look at drawing) and make note of this value.
- Unscrew grub crews (6) on both sides of the carriage.
- Pull only the middle sliding blocks (7) out of the carriage.
- Unscrew cylindric screws (8) at the bearing-block plates (5) and dismount them completely with the bearing-blocks (9) at both ends of the unit.
- Pull out the belt-adjusters (11) completely with the belt out of the carriage (12) and the guiding-profile (10).
- Unscrew the countersunk head screws (13) and dismount the belt-adjuster (11,14).

Reconstruction of the unit in opposed order

- Shorten the new belt to the length of the old one.
- Push the belt with teeth side up to the carriage (10) into the slot of the guiding-profile (15) and push it with the ends through each bearing-block (8,9).
- Mount the belt-adjusters (11,14) by the countersunk head screws (13) and lock them again with glue.
- Push them again together with the belt into the guiding-profile (10) and then into the carriage (12).
- Mount the bearing-block plates (8) again together with the bearing-blocks (9) at the ends of the unit.
- Mount both belt-adjusters (11,14) with consideration of the reach of the grub-screws „S" and lock the grub screws (6) with glue.
- Pull the middle cover-band (4) through the carriage.
- Pull in the middle sliding blocks (7) into slot of the carriage.
- Mount the grub screws (3) on one side of the unit and tension the 3 cover-bands from the other side and fix them too by the grub-screws (3).

Belt exchange QL / QS



IMPORTANT NOTE!!!

If the belt (9) in the belt adjuster (7) is locked additionally by a bolt (12), unscrew the bolt first. Push the new belt (9) from the side into the belt adjuster (7) and drill a hole, which should be a little bit larger than the bolt diameter, into the new belt.
Now put a little bit locking glue onto the bolt and fix it again.

Changing belt of QL/QS 60,80,100

- Unscrew cylindric screws (1) and dismount cover caps (2) on both sides of the carriage.
- Unscrew cylindric screws (3) on both sides of the carriage (8).
- Unscrew cylindric screws (4) and the grub screws (5) at the bearing-block (6) and dismount them completely at both ends of the unit.
- Pull out the belt-adjusters (7) completely with the belt out of the carriage (12) and the guiding-profile (10).
- Press the belt sideways out of both belt-adjusters (7).
- Pull the belt completely out of the bearing-blocks (6).

Reconstruction of the unit in opposed order

- Shorten the new belt to the length of the old one.
- Push the belt with teeth side up to the carriage (8) into the slot of the guiding-profile (11) and push it with the ends through each bearing-block (6).
- Press the belt again into the belt-adjusters (7).
- Push them again together with the belt into the guiding-profile (10) and then into the carriage (8).
- Mount the bearing-blocks (6) again.
- Mount both belt-adjusters (7) and lock the cylindric screws (6) with glue.
  You have to tension the belt with dosed force and test the soft running of the pulleys by turning them.
- Mount the cover caps (2) again.

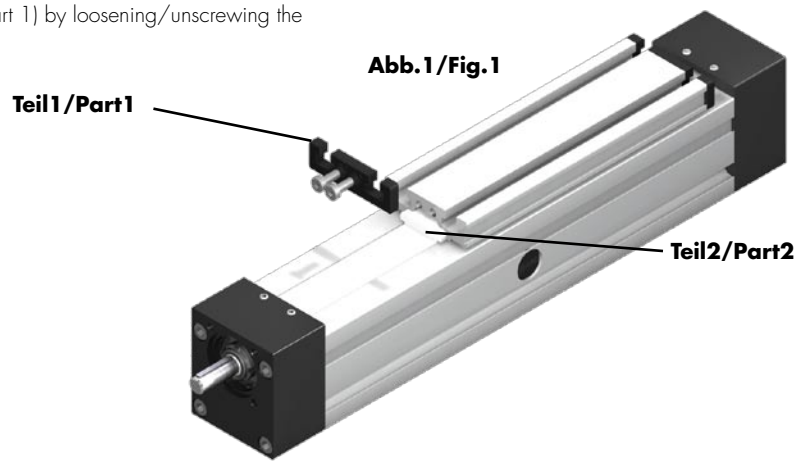
Retrofitting of QST/K 60 and 80.

Our linear axes are constantly tested in fatigue tests in order to detect any weak points. These tests showed that in case of a loss of tension in the cover band, the stainless steel band on the lower side of the carriage will drag in the edge area. This can result in abrasion of black particles. Since we absolutely wanted to eliminate this visual weak point, we created a retrofitting kit which can be very easily installed.

The weakness is remedied by a teflon strip that is inserted between the lower side of the carriage and the upper side of the stainless steel sheet. The retrofitting can be realised very easily and quickly.

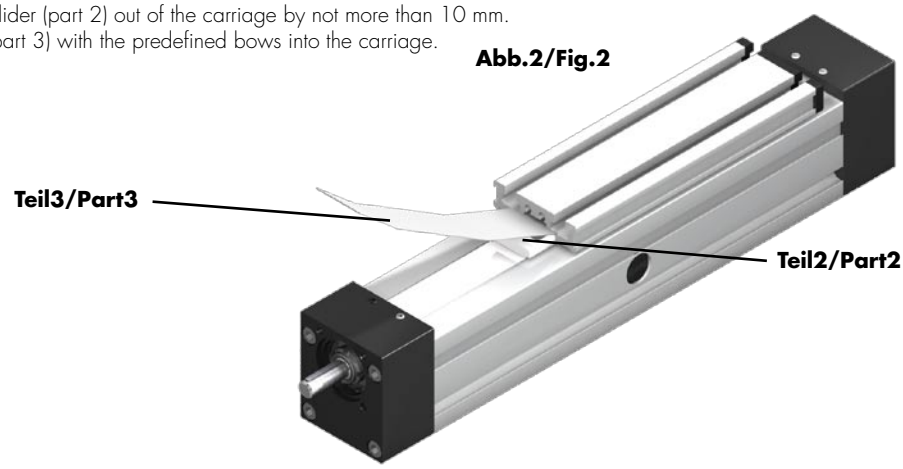
Remove one carriage end plate (part 1) by loosening/unscrewing the two cylinder head screws.

Abb.1/Fig.1



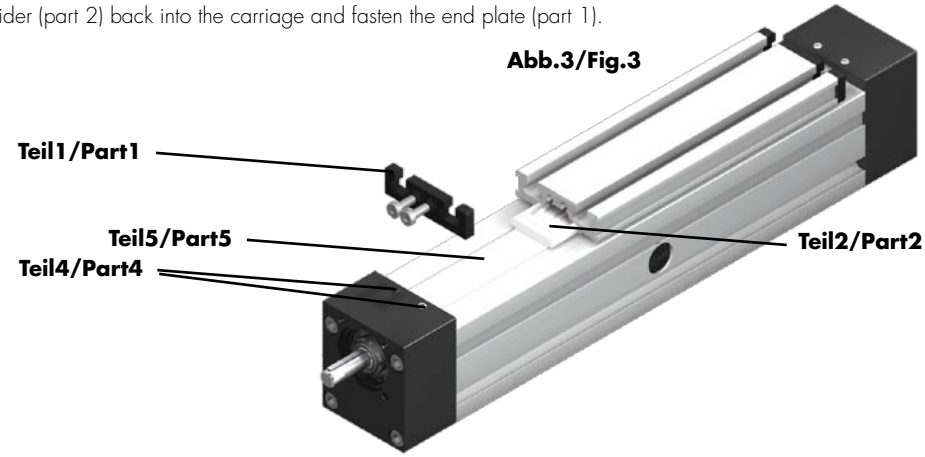
Pull the white plastic slider (part 2) out of the carriage by not more than 10 mm.
Insert the teflon strip (part 3) with the predefined bows into the carriage.

Abb.2/Fig.2



Press the plastic slider (part 2) back into the carriage and fasten the end plate (part 1).

Abb.3/Fig.3



If the cover band should lose its tension for any reason whatsoever, you should increase the tension following the procedure described below.

Remove one carriage end plate on one side (see above, part 1); it is not important which side you choose. Then pull the white plastic slider (part 2) out of the carriage by not more than 10 mm. Loosen the setscrews (part 4) in the bearing block on the same side, slip the cover band using your fingers into the direction of the bearing block (part 5 in the direction of the arrow). Hold it with your fingers in tensioned position until the setscrews are fastened (part 4) and re-fasten the setscrews to the bearing block. Then push the plastic slider (part 2) back into the carriage and fasten the end plate (part 1).

Note

Terms and Conditions of Sale and Payment

§ 1 Scope of the General Terms and Conditions

(1) The Supplier's deliveries, services and offers are made solely on the basis of these General Terms and Conditions. Thus, these General Terms and Conditions shall also apply to all future business relations, even if not explicitly agreed upon again. At the latest, these General Terms and Conditions shall be considered accepted upon acceptance of the goods or services. Any counter confirmations made by the Customer with reference to its own terms and conditions are hereby rejected.

(2) All agreements made between the Supplier and the Customer for the purpose of the fulfilment of this contract must be in writing.

§ 2 Offer and Conclusion of Contract

(1) Offers made by the Supplier are non-binding and subject to change. Any declarations of acceptance and all orders require the Supplier's confirmation in writing or by fax to be legally binding. The contract is deemed to be concluded upon the Supplier's sending a written declaration (acknowledgement of order), which shall be the decisive document determining the scope of its obligations. The delivery substitutes a written acknowledgement of order.

(2) The performance parameters specified in our catalogues and offers, such as illustrations, drawings etc., shall be considered as approximate only. Drawings, illustrations, dimensions, weights or other performance data are only binding if they have been explicitly agreed on in writing. The Supplier reserves, without restriction, all rights of ownership and copyright to any quotations, drawings and other documents (hereinafter collectively referred to as the "Documents"). These Documents may not be made accessible to any third parties without the Supplier's prior consent; should the order not be placed with the Supplier, such documents are to be returned to the Supplier immediately on request.

(3) The Supplier's sales staff is not authorised to make any verbal collateral agreements or to give any verbal assurances that go beyond the content of the written contract.

(4) The Customer is liable for the accuracy, correctness and completeness of the order documents and order information provided by it; this includes in particular drawings as well as technical specifications and samples. Any verbal information, also with regard to modifications or amendments to the documents and data already submitted, must be confirmed in writing. If an order is neither confirmed in writing nor executed by the Supplier within one month of its receipt, or in particular cases (e.g. in case of custom-made products) within three months of receipt – in which case the Customer is bound by its order during such period – the Customer shall be entitled to revoke its order without having the right to claim damages from the Supplier.

§ 3 Prices

(1) Unless stated otherwise, the Supplier is bound by the prices given in its quotations for a period of 30 days from their date of issue. Otherwise the prices mentioned in the Supplier's acknowledgement of order shall apply, which do not include the applicable legal value added tax, nor any cost of installation, start-up and assembly. Additional deliveries and services will be invoiced separately.

(2) Unless otherwise agreed, the prices are FOB Luhden warehouse, excluding packaging, freight, postage and insurance cost. The type of packaging shall be chosen by the Supplier at its discretion. The packaging shall be invoiced to the Customer at cost price and will not be taken back by the Supplier.

§ 4 Time of Delivery and Performance / Acceptance

(1) Delivery dates or periods, which may be agreed upon in a binding or non-binding manner, must be specified in writing. Our delivery period begins with the date of our acknowledgement of order, provided that at this time all of the documents required from the Customer, the necessary permits, releases, clarifications and approvals of plans have been submitted and the agreed payment terms and other obligations have been fulfilled and, in addition, any and all technical issues that were still open when the contract was signed have been mutually agreed upon. If these prerequisites are not met in time, the delivery period will be prolonged accordingly.

(2) The Supplier is not liable for delays in delivery and performance, even if binding dates and times have been agreed upon, in cases of force majeure or in case of circumstances which substantially and not only temporarily impede the delivery or make it impossible - this includes in particular strike, lock-out, government orders, malfunction or breakdown of important production facilities/machines, delays in the supply of essential raw materials and utilities, delays in transport, etc.; this applies also when these circumstances affect our suppliers or their sub-suppliers. In such cases, the Supplier shall be entitled to delay the supply and/or performance for the duration of the hindrance plus an appropriate start-up time or to withdraw totally or in part from that part of the contract which is not yet fulfilled.

(3) If the hindrance lasts for longer than 3 months, the Customer shall be entitled, after granting a reasonable extension of time, to withdraw from that part of the contract which is not yet fulfilled. Should the delivery time be extended or should the Supplier be released from its obligations, the Customer shall have no right to claim compensation for damages. The Supplier may only invoke the aforementioned circumstances, if the Customer is informed accordingly without delay.

(4) In as far as the Supplier is responsible for the non-compliance with bindingly promised deadlines and dates, or in as far as the Supplier is in default, the Customer shall be entitled to compensation for delayed performance at the amount of 1/2% of the invoice value for each complete week of the delayed performance, but limited in total to a maximum of 5% of the invoice value of all deliveries and services affected by the delay. Any claims beyond this are excluded, unless the delayed performance is based on at least gross negligence by the Supplier.

(5) The Supplier is at all times entitled to make partial deliveries or to render partial services, unless such partial deliveries or partial services are not of interest to the Customer.

(6) If a formal acceptance procedure of the delivered materials is desired, the conditions of such procedure must be established at the latest upon conclusion of the contract. The acceptance procedure must be carried out at the Supplier's premises immediately after it has declared its readiness for acceptance. The cost of the acceptance procedure shall be borne by the Customer. Partial deliveries are permissible.

In all other cases, the delivery object is deemed to be accepted when it is taken into operation in accordance with its intended use, however at the latest 3 weeks after delivery to the Customer.

(7) If the Customer is in default of acceptance, the Supplier shall be entitled to claim compensation for any damages it has incurred; upon default of acceptance, the risk of accidental deterioration or accidental loss passes to the Buyer.

§ 5 Transfer of Risk

The risk is transferred to the Customer as soon as the consignment has been handed over to the person responsible for the transport or has left the Supplier's warehouse for the purpose of dispatch, irrespective of who bears the freight costs. If the delivery is delayed upon the Customer's request, the risk shall pass to the Customer when the notice is given that the goods are ready for delivery. Any storage costs incurred after the transfer of risk shall be borne by the Customer. At the Customer's request and expense, the Supplier shall insure shipments against the usual transport risks.

§ 6 Customer's Rights in Case of Defects

(1) The products are delivered free of defects in design, manufacturing and materials; the period for assertion of claims for defects is one year from the transfer of risk. The shortening of the limitation period according to sentence 1 does not apply in case of intent or gross negligence, nor in case of injury to life, body or health, in case of fraudulent intent or in case of the Supplier's assuming a guarantee. In such cases, the legal limitation period shall apply.

Terms and Conditions of Sale and Payment

(2) Should the Supplier's operating or maintenance instructions not be observed, or should the products be modified, parts exchanged or consumables used which do not comply with the original specifications, then any claims for defects of the products shall become void, if the Customer cannot refute a relevant substantiated statement claiming that one of these circumstances has caused the defect. The same applies if the deficiencies are due to poor installation, wrong assembly, poor maintenance, defective or negligent treatment or storage, defective repairs not executed by the Supplier, modifications made without our written consent, excessive load, unsuitable conditions of use and inappropriate operating materials or to any chemical, electro-chemical or electrical influences for which we are not responsible as well as weather or other natural influences.

(3) Any claims made by the Customer relating to defects require the Customer to have duly fulfilled its obligations according to section 377 of the German Commercial Code (HGB) in terms of examining the goods and lodging a complaint, otherwise any claims shall be insubstantial: The Customer shall notify the Supplier's customer service manager of any defects in writing immediately, at the latest within one week of receipt of the delivery. In case of defects which cannot be detected within this period despite careful inspection, the Supplier shall be informed in writing immediately after they have been discovered.

(4) If the Customer has notified the Supplier of a defect, the Supplier shall demand, at its choice and expense, that either:

a) the defective part or unit be sent to the Supplier for repair and subsequent return; or

b) the Customer shall keep the defective part or unit ready and the Supplier shall send a service technician to carry out the repair on the Buyer's premises.

Should the Customer request that rectification work be carried out at a certain location, the Supplier may do so; in this case, any exchanged parts shall not be invoiced, however, working time and travelling expenses shall have to be paid according to the Supplier's standard rates.

(5) If the rectification should fail after an appropriate period, the Customer can, at its choice, either demand a price reduction or withdraw from the contract.

(6) Liability for normal wear is excluded.

(7) Only the immediate Customer is entitled to claims due to defects against the Supplier and such claims are not transferable.

(8) In case of parts used for completion, refurbishment or modification sent by the Customer to the Supplier, the latter will assume no liability for their behaviour during processing; should the materials become damaged during processing, the Supplier shall be indemnified for the processing costs incurred up to that point, unless the damage is due to an intentional or grossly negligent breach of duty by the Supplier or its vicarious agent or a breach of duty that is of material importance to the object of the contract. This limitation of liability does not apply to personal injury or death.

§ 7 Replacement Parts

For a period of five years following delivery of a machine, the Supplier shall deliver replacement parts for that machine at the current prices.

§ 8 Retention of Title

(1) Until settlement of all accounts receivable to which the Supplier should be entitled from the Customer now or in future arising from any legal grounds (including all balance claims from current account), the following securities shall be granted to the Supplier, which it will release on request at its choice insofar as their value exceeds the accounts receivable lastingly by more than 10%.

(2) The goods remain the property of the Supplier. Processings or modifications of the goods are always made for the Supplier as manufacturer, but without any obligation for it. Should the Supplier's (co-)ownership expire as a result of combination of items, it is agreed upon already now that the Customer's (co-)ownership of this combined item is transferred to the Supplier in a pro rata manner (with regard to the invoice value). The Customer shall store the Supplier's (co-)property free of charge. Goods for which the Supplier is entitled to (co-) ownership will hereinafter be referred to as 'goods under reservation'.

(3) The Customer is entitled to process and sell the goods under reservation in proper business dealings, provided that it is not in default of payment. Pledging or assignment as security is inadmissible. Any other accounts receivable (including all balance claims from current account) arising from resale or any other legal ground (insurance, unlawful act) regarding the goods under reservation are already now assigned in full by the Customer to the Supplier as security. The Supplier authorises the Customer irrevocably to collect the accounts receivable transferred to the Supplier for the Supplier's account in its own name. This collection authorisation can only be revoked if the Customer does not duly meet its payment obligations.

(4) Should any third parties have access of any kind to the goods under reservation, especially by orders of attachment, the Customer shall draw attention to the fact that the goods are the Supplier's property and shall inform the Supplier immediately, so that the Supplier can enforce its rights of ownership. In as far as the third party is unable to reimburse the Supplier for judicial or out-of-court costs arising in this context, the Customer shall be liable for such costs.

(5) In the event of conduct in violation of the contract on the part of the Customer – in particular default of payment – the Supplier shall be entitled to withdraw from the contract and to demand the return of the goods under reservation.

(6) Up to the complete payment of the goods under reservation, the Customer is obliged to keep the Supplier informed about the location of the goods under reservation at any time.

§ 9 Payment

(1) Unless agreed otherwise, the Supplier's invoices are payable 30 days after invoicing without deductions.
The Supplier is entitled, despite provisions made by the Customer stipulating otherwise, at first to credit payments made by the Customer against its older debts and shall inform the Customer of the type of transaction made. In the case that expenses have been incurred or interest accrued, the Supplier is entitled to credit the payment at first against the expenses, then the interest and finally against the main service.

(2) A payment is deemed to have been made only when the Supplier has the amount at its disposal. In case of cheques the payment is deemed as having been made when the cheque is cashed.

(3) Should the Customer be in default of payment, the Supplier shall be entitled to demand interest at a rate of 8 percentage points above the base rate as lump-sum compensation from the relevant time onwards. A lower rate is to be applied if the Customer can provide evidence of a lower burden; the Supplier may provide evidence of a higher damage.

(4) Should the Supplier learn of any circumstances that call the Customer's credit standing into question, in particular in case that a cheque is not cashed or payments are suspended, or should the Supplier learn of any other circumstances which call the Customer's credit standing into question, the Supplier shall be entitled to deem the total remaining debt as due, even if it has accepted cheques. In this case the Supplier is also entitled to demand payments in advance or securities.

(5) The Customer is only entitled to set-off, retention or reduction, even in case that complaints have been made or compensating claims pleaded, when the compensating claims have been determined to be final and beyond dispute. The Customer is, however, also entitled to retention due to compensation claims arising from the same contractual relationship.

§ 10 Design Changes

The Supplier reserves the right to make design changes at any time; however, it is not obliged to include such changes also in products already delivered.

Terms and Conditions of Sale and Payment

§ 11 Patents

In case of custom-made products, the examination and the liability with respect to any third party's property rights is exclusively the responsibility of the Customer. The Customer shall be responsible towards the Supplier in full scope that any third party's property rights will not be infringed hereby and shall hold the Supplier harmless from any possible claims for damages made by third parties due to such an infringement.

(2) The Supplier, in turn, shall indemnify the Customer and its customers with regard to claims arising from violation of copyrights, trademarks or patents, unless the design of a delivery item originates from the Customer. As far as the amount of the indemnification is concerned, the Supplier's obligation to indemnify is limited to the expected damage.
An additional prerequisite for the indemnification is that the conducting of legal proceedings is to be left to the Supplier and that the stated violation of rights is to be assigned exclusively to the design of the Supplier's delivery items without combination or usage together with other products.

(3) The Supplier has the choice to release itself from the obligations taken on in paragraph 1 by either

a) procuring the required licences with regard to the alleged violated patents

or

b) putting an altered delivery item or parts thereof at the Customer's disposal, which in case of exchange with the violating delivery item or part thereof will eliminate the accusation of violation with regard to the delivery item.

§ 12 Secrecy

The Supplier's technical documents, drawings, service and operating manuals as well as any and all information received from the Supplier during the contract negotiations regarding the function and the structure of the goods are subject to secrecy. The Customer agrees to prevent unauthorized persons from getting access to the corresponding information.

(2) Unless expressly otherwise agreed in writing, the information submitted to the Supplier in connection with the orders are deemed as non-confidential.

§ 13 Liability

(1) Claims for damages are excluded regardless of the type of violation, including unlawful acts, insofar as they are not due to intention or gross negligence.

(2) As far as the violation of material contractual obligations is concerned, the Supplier is liable for any negligence, however only up to the amount of the foreseeable damage. Claims for lost profit, saved expenditure, claims for damages by third parties as well as claims for other indirect and consequential damages cannot be made unless an essential quality feature guaranteed by the Supplier has the express purpose of protecting the Customer from such damage.

(3) The liability limitations and exclusions in paragraphs 1 and 2 are not applicable to claims which are due to deceitful conduct on the part of the Supplier, nor in case of a liability for guaranteed quality features, nor to claims according to the product liability law, nor to injuries to life, body or health.

(4) Insofar as the liability of the Supplier is excluded or limited, this shall also apply to the Supplier's clerical staff, employees, representatives and vicarious agents.

§ 14 Final Provisions

(1) A transfer of the contractual rights and obligations to third parties by the Customer is not permitted unless the Supplier has given its written consent.

(2) These General Terms and Conditions and the complete legal relationship between Supplier and Customer are subject to the laws of the Federal Republic of Germany. The provisions of the UN Convention on Contracts for the International Sale of Goods shall not apply.

(2) Minden shall be the exclusive place of jurisdiction for any disputes arising directly or indirectly out of the contractual relationship if the Customer is a trader, a legal person under public law or a special fund under public law. The Supplier shall also have the right to institute legal proceedings at the Customer's place of business.

(3) In accordance with section 33 of the German Data Protection Law (BDSG) it is hereby pointed out that the Customer's data will be stored by the Supplier. These data will be processed in accordance with both the Federal Data Protection Law (BDSG) and the Teleservices Data Protection Law.

(4) Should one of the provisions of these General Terms and Conditions or a provision of any other agreement be or become ineffective, this will not affect the validity of any other provisions or agreements.

(Extract from the Federal Data Protection Law) in accordance with section 26 of the Federal Data Protection Law (BDSG) we hereby inform you that our bookkeeping is computerised and that in this context we will also store the data regarding your company in our computers. These data became known to us only from our mutual business relationship and their storage is therefore permissible according to section 23 of the BDSG.

Version of April 2004
